6. QSL Survey

Yahoo group: laterisersgroup
Date: 2010-10-05 01:37:52 UTC
From: RonL
Topic: 6 Message: 6

Folks,

I am almost out of my current QSL cards, so I am thinking about redesigning a new card with a more Western or Texas theme.

I posted three JPGs on our new Late Risers Yahoo group.
http://groups.yahoo.com/group/laterisersgroup/ .

Just log in to the Late Risers group and click on the Photos link. You will see the QSL Survey Album there.

The first is my current card. The others are two new ones I just designed. One is a sunset I shot on a country road near Brenham, Texas; the footnote is mine. The other I shot at a little country rodeo in Idaho.

I can't decide which I like best. So, which one do you like best? The moon card, the sunset or the rodeo?

Thanks for your help,

73, Ron

8. New DX Entities as of Sunday Oct. 10th

Yahoo group: laterisersgroup
Date: 2010-10-05 12:43:55 UTC
From: RonL
Topic: 8 Message: 8

Several new countries will be on the air beginning Sunday and they are not on the far side of the moon.

These are new Caribbean countries that are created as a result of the break up of the Netherlands Antilles into independent territories still under Dutch control. This will create several new DX entities from the individual islands that count as separate DXCC credit.

Because of their proximity to the US, the pileups should be fierce. There are several DXpedtions participating. See the press release below. A copy of the band plan is located in the files section of our Yahoo group.
++
JOINT PRESS RELEASE
Date: Sept. 30, 2010
From: DXpedition leaders/teams participating in DXpeditions to new DXCC entities beginning 10-10-10
To: ALL interested DXers worldwide

Due to the unprecedented number of potential new DXCC entities and numerous planned DXpeditions commencing 10-10-10, we felt it was prudent to establish a Band Plan to try to minimize interference between DXpeditions and their pileups. The following Band Plan is the result of discussions that have been ongoing for several weeks. It is a Plan....however, without the cooperation of DXers, the plan will not work. It is extremely important that DXers call DXpeditions only within the specified frequency ranges. If you do not, you will not work the station you are calling and you will likely interfere with another DXpedition on another Island. This will require cooperation and discipline.

Success of this plan also requires that DXers help spread the information about the Band Plan to their fellow DXers and DX Clubs. WE NEED YOUR HELP! But if we work together, we will be able to get many, many DXers into our logs!

Thanks for your cooperation!

Bob K4UEE-Saba-PJ6A

10. Re: QSL Survey

Yahoo group: laterisersgroup
Date: 2010-10-05 15:59:39 UTC
From: mwriedel2002
Topic: 6 Message: 10

All 3 have their merits.

Current pic with moon is nice, though might lead recipient to conclude you're into EME (is this true?). Also, I don't like the vertically laid out call sign.

Tree pic is a stunning shot, esp. the sky. It is very calming. But: "No Place but Texas" seems a bit hyperbolic, if not generic. There are similar 'lone-tree' shots on the plains of Kenya and probably bunches more from places in the U.S. While I love the shot, I don't find it distinctively Texan.

Rodeo shot is very busy but the angled (oblique) lines make it a very dynamic shot. I like the fact that the vertical tail was included. Text placement and size is great. The shot does however reinforce TX stereotypes.

However, given your targeted audience (recipients), I feel that this pic would be most in line with what they'd like to see.

Hence my vote is for rodeo.

73s, Mike (KE5VCT)

I like the rodeo shot. I assume you took it yourself? My only comment if you go with that one would be to black-out (red-out) the dodge logos. My eye seemed to zone in on it.... and I don't think you want endorse them, at least not in this venue.
73,
erik

13. Opinions/Recomendations/Etc. on several Vertical Antennas

Yahoo group: laterisersgroup
Date: 2010-10-06 00:34:43 UTC
From: ke5tjl_michael
Topic: 13 Message: 13

Hi, everyone! I have been checking out vertical antennas and have narrowed down the field to several. I'm wanting 10-80m in general and roof mounted so it must not weigh a lot. At this time I can't mount it in the backyard. I'm asking all of you to look at the antennas that I've picked and tell me what you think. Some state that they do not require radials, but some do. Can a ground from the antenna to earth ground help in the absence of no radials? Know of any verticals that you know/heard of that are working great without radials? I really appreciate it guys. The antennas are:
Hy-Gain DX-77A 10-40m
Hy-Gain AV-640, 6-40m
Cushcraft R8, 6=40m
Gap Titan DX 10-b,ut can't mount on roof because of guying, Ideas?
Comet CHA-250B, 6-80m, supposidly no radials

Please let me know your ideas, thoughts, etc. I really would appreciate it!

18. A message from W0KIE candidate for West Gulf Division Vice Director

Yahoo group: laterisersgroup
Date: 2010-10-07 00:37:27 UTC
From: RonL
Topic: 18 Message: 18

Late Risers,

I received the following e-mail today and am just passing it along without comment or opinion.

ARRL Elections will be held this month and if you ar an ARRL member, it is my hope that you be as fully informed as possible.

Ron, AE5NO
++

I'm Mike Reynolds W0KIE, Candidate for ARRL West Gulf Vice Director. The ARRL West Gulf ballots were mailed on September 30th. Because they were not first class mailed you should receive them later rather than sooner.

Before you vote PLEASE take time to read the following two letters.

From WG5F To: Mike Reynolds W0KIE

"Mike, This process you have been going through has been very educational for me. I appreciate your sharing of the messages, good and bad, you've been receiving.

I always wondered how things worked at the local/district/national level of ARRL. This has been a fascinating, if not horrifying, window into the politics of ham radio.

For more than 40 years I've seen the ballots come and go, new presidents at HQ come and go, and sometimes I try to read the minutes of the director's meeting when they are published, and I never seem to really get a grasp of what is going on. I always suspected that I was not supposed to know what was really going on, but the process to which you've subjected yourself, has certainly been enlightening.

The backroom deals, and half truth statements in campaign documents are certainly not what I expect from hams, but sadly we are just a reflection of the society in which we live. There are too many that seek these offices and positions of authority for personal gain and satisfaction rather than a sense of duty to an ideal whose time may have passed.

Please keep up the good fight.

I'll continue to hope that there are enough motivated hams among us who are unhappy with the shenanigans and are looking for an alternative.

73, -Ed, WG5F-"

From: W2IK To: The current West Gulf Leadership

"I know that communicating with any of you is a lost cause. The "good old boys club" is so firmly entrenched in Texas that any attempt to dislodge it is a waste of energy, so I'll congratulate you on your re-election. It's a shame that real hams have no control of the ARRL destiny, which is why after next year, when my membership is up, there will be one less ARRL member from Texas... me. I'm sure others will follow suit and I will no longer support hams in joining the ARRL.

There are many good things about being a member of the ARRL, but they are greatly overshadowed by the people who wear plastic badges but only think of their own egos and "friends". You appoint friends with little regard as to whether they can properly carry out the responsibility. I have seen the "good old boys club" so often down here that nothing surprises me.

I have more emcomm experience than anyone of you down here, yet when I moved to Texas after being a first responder at WTC 9/11 "Ground Zero", I was denied membership to the local ARES group when all I wanted to be was a "worker bee" and nothing more. A shame, because I had so much to offer. Since then, I've had to bail your group out when there weren't enough ARES membership to even handle a simple task of being net control op on the HF hurricane net.

I've written so many articles and web sites that other ARES groups outside the state use a lot of my stuff for their training including my emcomm training course parts of which were "borrowed" for the ARRL course and 188 pages of the 400 page Canadian emergency training course were penned by me.

My unique experience being at "Ground Zero" during the WTC 9/11 disaster and during other events had me offering a special, one of a kind, several day "Jump Team Boot Camp" covering every aspect of emcomm work. Almost every year hams from around the country have participated, getting dirty, getting real experience. Everywhere except ARES people from South Texas. Again, the "good old boys club" stifled any local participation. I guess they are afraid that their membership might learn the right way of doing things.

You are only fooling yourself by maintaining that amateur radio is not hurting. You are one of the reasons it is. Business as usual is not working. The tree is dying and the only way it can be healthy again is by some serious pruning. If I were in a position to do something I would fire a lot of people who walk around at hamfests and do nothing beyond pinning on a badge."

I meant in general, and maybe, on a somewhat regular basis. Maybe we could find an evening for an ad-hoc local net on ssb with some digital afterward. Just a thought. Something to talk about on Saturday.

Hey Tony, Ron, and the rest of the group,

I am a bit under the weather at present, but will try to come up with a good time and frequency(s) for us to try in the near future. Tony, I will also post to the PARK website discussion board. I wanted to float the idea with a small group first to get reaction and it seems to be pretty good.

Look for my post either tomorrow or Wednesday evening, once I kick this bug.

73 to all,

Darren

Date: 2010-10-12 13:46:42 UTC
From: RonL
Topic: 32 Message: 32

Coming up on Oct 30-31 is the CQ WW DX SSB Contest. It runs from 7 AM Central on Oct 30th through 7 PM Oct 31st. The CW Portion runs on Nov 27th through Nov 28th; Same times.

You can enter both individually and as a club so long as we submit at least three logs. See the complete set of rules below

www.cqww.com/rules.htm

If anyone is interested in adding your score to our club aggregate, drop me an e-mail

Contests like this are fun and a great way to improve your HF operating skills. You don't have to be a dedicated contester to participate. A major DX contest like this will pique your interest in Ham Radio

73,
Ron AE5NO

37. VHF 2M SSB Round Table

Yahoo group: laterisersgroup
Date: 2010-10-13 13:35:05 UTC
From: Darren Mende
Topic: 37 Message: 37

Good Day All,

I would like to meet around 8pm on 144.250 USB (2M) for an informal round table discussion. Anyone who can make it is encouraged to drop by and try VHF SSB. I know many of you do not have all mode 2M radios, so at 8:30 I will switch to 50.150 USB (6M) for those that have HF+6M radios. This will be very informal with the intent of trying out a couple of new bands/modes for some folks and checking propagation.

If anyone has an issue, feel free to contact me directly at k5qb at arrl . net or via Yahoo IM at k5qb, otherwise, you can post to the group and it should come up within a few minutes.

I hope to hear everyone tonight.

73,

Darren
K5QB

P.S. Would someone mind posting this to the PARK website? I would appreciate it, as I have to get off to work.

39. Butternut Vertical Antenna For Sale/Trade

Yahoo group: laterisersgroup
Date: 2010-10-14 03:45:15 UTC
From: Darren Mende
Topic: 39 Message: 39
Attachments: 1 described; binary payloads are missing from this source WARC

Good Eve All,

For sale or, preferably, trade, I have a Butternut HF6V. This is a 6 band vertical that covers 80-40-30-20-15-10 meters. It has a few bumps, but is in good overall shape. I have the roof mount kit, along with the tuned radials. It is missing the 80M matching coil (which may not be necessary) and the 20M 75ohm matching coax (also not necessary). I have worked all over the world with this antenna, but have no room at my new QTH for the required radials.

I am really more interested in a suitable trade of radio gear than of cash. I will entertain all offers and am easy to talk to ;-). The website below has all of the facts, figures, and prices for this antenna. I am not crazy and do not believe that the antenna is worth what a new model brings, but would like to make a fair trade for someone else's unused gear.

www.bencher.com

I can be reached at

k5qb@...

73,

Darren

41. Antenna Permit for my Comet Vertical

Yahoo group: laterisersgroup
Date: 2010-10-15 17:57:21 UTC
From: ke5tjl_michael
Topic: 41 Message: 41

Took a little trip down to City Hall and walked into the Development office. I told the lady there what I was wanting to do (installing an antenna), and gave her all the essential information. She told me that what I was going to do did not require a permit. I got her business card and thanked her several times and left. I'm not in an HOA, and she said to have fun. Made my day! This saved me approx. $50 from earlier phone conversations with the actual code dudes. See ya'll Saturday morning for breakfast!

42. PARK Elections

Late Risers,
Below you will find the slate of candidates for the election to be held next Monday night. You should have received this e-mail from the club but just in case you missed it,here it is:

_____
From: Plano Amateur Radio Klub [mailto:webmaster@...]
Sent: Friday, October 15, 2010 5:29 PM
To: webmaster@...
Subject: PARK October General Meeting and Elections

This month it is time for our yearly elections. At the upcoming meeting on October 18, 2010, PARK will be holding elections for the board positions of Vice President, Secretary, Web Master, Public Relations Director and Communications Director. The following members are standing for election:

Vice President Bill Krueger and Larry Essary

Secretary Ron Litt

Web Master Clint Satterwhite

Public Relations Director Andy Knelpler

Communications Director Bruce Dingman

Election details and a proxy ballot are within the Articles & Files - Club Documents of the website, www.k5prk.net. In addition to the elections we will also be holding a show and tell program. If you have a ham project or piece of equipment you would like to display and talk about, bring it to the meeting.

Please join us at 7:30 pm. The meeting will be held at the Grace Presbyterian Church, 4300 West Park Boulevard, Plano, TX. The church is just west of Coit Road on the south side of Park Boulevard. Parking is located on the northwest corner of the church property. Our meeting location is Wheelus Hall. Thanks, Tony W5ADC

See y'all on Saturday Morning for breakfast.

Ron, AE5NO

43. Our own Matt KD5TAN DXpedition to Botswana!

Yahoo group: laterisersgroup
Date: 2010-10-17 14:14:13 UTC
From: RonL
Topic: 43 Message: 43

That's right Late Risers, Matt Lehman KD5TAN will be part of a DXpedition to Botswana (A25) from Oct 21 - Nov 4th. He has already left for Africa but you can get the details from their web site at http://www.qsl.net/a25-2010/

Each operator will be using their own A25 call sign, Matt will be operating as A25TAN. During the DQ WW DX SSB Contest (10/30 0000 UTC - 10/31 2359 UTC), the team will be using the call sign A25HQ.

Look for Matt on the bands...he will be under the pile up.

Ron, AE5NO

Ron,

Any chance you guys might be willing to move the breakfast up a little to say 8:00 or maybe 8:30? I know there are usually other events that are being scheduld around later in the day, but 7:00 am isn't exactly "late" for me :). I'd love to attend, but getting me out of bed that early on a Saturday is almost impossible :)

Date: 2010-10-21 14:28:38 UTC
From: laterisersgroup@yahoogroups.com
Topic: 52 Message: 52

Enter your vote today! A new poll has been created for the
laterisersgroup group:

Are you interested in moving Saturday breakfast to a later time?
Vote below. You can choose more than one time. This poll will be open until Nov. 4th.
Results will be distributed to all group members.

o Keep at 7 AM
o 7:30 AM
o 8:00 AM
o 8:30 AM
o 9:00 AM

To vote, please visit the following web page:
http://groups.yahoo.com/group/laterisersgroup/surveys?id=13043576

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

FYI... I have three Chinese gentlemen working for me, so I thought I would get their input on the pronunciation of Wouxun.

Just the name perplexed all of them. They said "you can't do that" and "that isn't right". When we looked up the chinese company, it seems that the translation added a W to make it more western culture friendly. A closer translation is OuXun.

In proper Manderin Chinese (there are many dialects) this would be pronounced O-Shween (like O-Queen but replacing the Q sound with a Sh).

And now you know... or know at least according to three native Chinese guys living in Texas. :D

According to the latest QST magazine (Nov. 2010 Page 52) the
pronunciation is "Oh Sheng". So it is still confusing. :)

INTRUDER WATCH: NEW WAY TO REPORT HAM-BAND INTRUDERS

The latest issue of the International Amateur Radio Union's Region 1 Monitoring System newsletter is asking hams to use its new online 'Intruder Logger' and 'Intruder Alert System' to file reports of unwanted users of the ham radio bands. Those providing input should include source, time in UTC and mode being used. Short time intruders should be sent to the Intruder Logger.
More on this including on-line reporting forms can be found at the following URL's:
IARU R1 Intruder Logger: http://peditio.net/intruder/bluechat.cgi
IARU R1 Intruder Alert System Email Reflector:
http://iaru-r1.org/mailman/listinfo/...rt_iaru-r1.org (IARU Region 1)

Good Evening All,

My suggestion is to keep the breakfast early, at 7 or 7:30, so we can get the primo table to which we have grown accustomed. Then, those who would like to come later can come at their leisure. We have no rules for time or when we adjourn, so this could be a "tiered" late risers breakfast. Granted, not too many folks will want to stay at the restaurant until 11 or 12, but I'm sure if people show up at 8 or 8:30, they will have company at the table, and good company at that.

See you all soon,

Darren

The time is now. It will be dog eat dog. Mano a mano at the botttom of the pileup. Take no prisoners but remember to be polite.

This is SSB weekend. Contest begins at 0000 UTC Oct 30 and ends 2359 UTC Oct 31,

That is 7 PM CDT on Oct 29th through 7 PM CDT on Oct 31 for you flat landers.

The rules? There are no rules just a lot of the big "T" out there in the ether. But just in case you need to read the rules, they are avaialble at:
http://www.cqww.com/CQWW-Rules-2010.pdf

Have fun.

67. My new Vertical antenna and CQ WW DX contest

Yahoo group: laterisersgroup
Date: 2010-11-01 11:29:54 UTC
From: ke5tjl_michael
Topic: 67 Message: 67

Guys, I got on the air on the first day of the contest with my used Comet Vertical antenna, and the bands didn't seem to have much traffic, except for a few that weren't answering. I tried again on Sunday and the bands were crawling with traffic. I got on and made multiple contacts on on 80m, a lot on 40m, some on 20m (it was crowded), 17m, 15m and 10m. My distance was Bogota, Columbia on 10m. This antenna does not require a tuner as the entire antenna is tuned from the factory. I would compare my dipole with the vertical and the vertical won out every time. I know that there are some trade-offs, but I'm a happy camper. Thanks to everyone who gave opinions, help and encouragement on this long project. I finally got there, and i like my Comet vertical a lot.

See you at breakfast this weekend!

73,

Michael

From: RonL
Topic: 32 Message: 69

Well, the contest was this weekend and if you got on 20 meters at all you know it was elbow to elbow up there.

I got sick with the stomach flu and was down for the count most of Saturday and Sunday, but I still managed to eke out 34 contacts mostly on 15 meters. 15 was wide open all weekend and not nearly as crowded.

Some notable new country contacts I made.

FY5KE - French Guiana - Home of Devil's Island Prison
HC8A - Galapagos Islands - Lots of turtles
PJ2T - Curacao
CR3A - Madeira Island
9Y4W - Trinidad & Tobago
PJ4X - Bonaire - One of the new DXCC entities created on Nov. 10
D4C - Cape Verde Island
OH1F - Finland

Not bad for an attic dipole.

Now, If I could only pump 500-600 watts through that. . .

From: RonL
Topic: 75 Message: 75

I am a history buff and have an avid interest in far away places. During the recent CQ WW DX contest one of my contacts was CR3A, the island of Madeira. If you don't know where that is, it is not surprising. It had to look it up myself.

The island lies in the Atlantic ocean about 350 miles off the coast of Africa, west of Morocco. The entire land mass is about the same as the city of Indianapolis, 308 Square miles. its population however is 300,000 more than than half the population of that city.

Although there are several hams on Madeira, it has also been the site of numerous DXpeditions.

The island is actually the top of a volcano that has been dormant for over 6000 years. The base of the volcano is at the sea floor almost 4 miles below sea level.

It was known to the Romans as the Purple Islands but was rediscovered in the 15th Century by Portuguese explorers under Prince Henry the Navigator. Today the island is one of two Autonomous Regions of Portugal, the other being the Azores located to the northwest.

Madeira appears to be a beautiful place. Check out these two links for some great photos.

Late Risers,

I will be operating as W2NYU during the Sweepstakes contest, Nov 21-22. W2NYU is the club call sign for the New York University Amateur Radio Club, where I attended college.

The club was disbanded when the school sold the University Heights campus during the seventies. Although it no longer has a physical club station, a group of former members have recently come together and activated a virtual club online. The club was originally licensed in 1924 as 2CCL and later W2CCL. We obtained the trusteeship of the historical club call signs, W2DSC and W2NYU. Visit the website at http://www.qsl.net/k2ul/nyuarc/index.htm

I will be attempting to beat my previous score of 36,648 points which occurred in the 1957 Sweepstakes Contest; 53 years ago.

Late Risers,

Don’t forget to join us for Breakfast Saturday morning at 7 AM at Poor Richards. Park Blvd and Ave K in Plano.

I would like to try to get as many of our group together for a photo.

Ron, AE5NO

Hey Fellas,

Sorry I missed you all this morning. I completely forgot I was scheduled to participate in the "Help the Homeless" walk-a-thon downtown this morning. My wife, daughter, and myself went down at about 7:30am, so there was no chance for me to drop by for breakfast. Last week my daughter woke us up early on Saturday morning with a nasty cold and fever, so that took my time all morning. I hope to see most of you Monday night at the club meeting.

Also, remember Wednesday night around 8pm. We meet on 144.250 USB at 8pmand move to 146.540 FM at 8:15pm.

73,

Darren

From: kf5iku@rocketmail.com
Topic: 86 Message: 86

I have a few 17" / 19" LCD monitors and an HP Media Center PC (m1080n)

The Media Center has:
HP Media Center m1080n Photosmart PC
3.2 GHz Pentium 4 (Hyper-Threading)
512 MB RAM, 250 GB Hard Drive
DVD+RW/CD-RW Drive, DVD-ROM Drive
Processor, Memory, and Motherboard

Hardware Platform: PC
Processor: 3.2 GHz Intel Pentium 4
System Bus Speed: 800 MHz
Number of Processors: 1
RAM: 512 MB
RAM Type: DDR SDRAM
Max RAM: 4 GB
L2 Cache: 1 MB
Memory Slots: 2
Operating System and Software

Operating System: Microsoft XP Media Center Edition
Special Features

Hyper-Threading Technology; Personal video recorder (PVR) with high performance hardware encoder featuring instant replay and up to 200 hours of video programming and archiving. Compatible with cable, digital cable, satellite TV and antenna. FM tuner (antenna included)
Keyboard and Mouse

Keyboard: HP wireless keyboard with extended range (up to 16 feet)
Mouse: Wireless optical mouse
Hard Drive

Size: 250 GB
Hard Drives: 1
Manufacturer: None
Type: Ultra ATA
Optical Drives, Other Mass Storage

CD-RW: 40x (read), 24x (write), 10x (rewrite)
DVD-ROM: 16x
DVD Recorder: (DVD+RW)
Additional Drives: Built-in 9-in-1 memory card reader - [supports Smart Smart Media, xD, MultiMedia Card, Secure Digital (SD), Compact Flash I, Compact Flash II, IBM Micro Drive, Memory Stick and Memory Stick Pro
Graphics and Display

Graphics Card: ATI RADEON X300 SE PCI-E graphics card
Graphics RAM: 128 MB
Sound

Its not worth much, but there it is - would be good for a rigblaster type of setup. I'm wanting to trade for antennas anywhere from 160m down (I'm an Extra).

90. ARRL Sweepstakes results

Yahoo group: laterisersgroup
Date: 2010-11-22 16:11:58 UTC
From: RonL
Topic: 90 Message: 90

Hi Late Risers,

Well my sweepstakes adventure is over and I had a great time. I'm still recovering.

I was QRV with my old college club call sign, W2NYU.

I got a claimed score of 21700 points, 175 contacts and 62 sections. I operated for approx 17 hours total with a couple of breaks. I used a combination of 15, 20, 40 and 80 meters.

I got some rare sections, Alaska, Hawaii, Virgin Islands, Rhode Island and both Dakotas but I missed on some close by states like Arkansas and Mississippi.

By band, my QSO's break down as follows:

15 meters 31
20 meters 57
40 meters 60
80 meters 22

I used my multi band dipole in the attic that works well on 20 and up and a 5BTV vertical camouflaged as a tree that I used for 40 and 80. The Vertical was Stan's W5SRL, SK, that I got from Rob McKinnie, AL7AW. Thanks to Rob. I hope Stan knows that his old antenna found a good home.

20 was a nightmare with wall to wall QRM but I did ok there. I used mostly the search and destroy strategy. Since I don't have a kilowatt and I am not from a rare section, calling CQ doesn't even attract flies.

I got some interesting queries about New York University signing North Texas Section; mostly they concerned my knowledge of geography. "Is that NNY?" "NTX, are you sure?", and other variations on that theme.

Apparently West Texas was a problem for a lot of east coast contesters. One ham asked if I wouldn't mind driving drive over to WTX so he could be sure someone was operating there.

A number of my contacts in the low power, single op category (Class A) had very high QSO numbers in the 1000 range that made me wonder if they were playing by the rules. One station I contacted in the last few minutes had 1200 contacts. That is about 50 Q's per hour or one every 1.2 minutes. I guess that is possible although I wonder how a single op station with a max of 150 watts can maintain that rate over 24 hours. He must have a hell of an antenna system and he never sleeps.

I wasn't very efficient this time but I learned a lot of things that I can do to improve my contest performance for next year, plus I had a great time.

I can't pull those all nighters anymore but not bad for a first effort in 53 years. When it was all over my wife was surprised that I did not just fall asleep. I guess I was on the adrenalin high.

From: Walter Lemons
Topic: 99 Message: 99

So, I'm designing a QSL Card. I've got my Call, name, address, county, and grid square on it. I've got a block for filling in the contact report.

What else should go in it. I seen some that have ITU Zone, CQ zone. (What zone are we in?)

Also, how big should it be?

Thanks Erik but I discovered that height is not as important as a good counterpoise. I added four radials for a total of eight just before the SS contest. As a result of the improved performance I was able to make half of my Q's on 40 and 80.

You can never have too many radials.

108. Lightning arrestor and replacement tubes for low price

Yahoo group: laterisersgroup
Date: 2010-12-01 21:11:26 UTC
From: ke5tjl_michael
Topic: 108 Message: 108

I searched the net and found a great buy on lightning protectors and the replacement tubes. They are on the L-com.com website and are very reasonably priced. I bought a 900V lightning protector for $14.99 and S&H is $9.50. You can purchase replaceable gas tubes for $4.99 each. I asked Mark Hershey to look at the specs and he said it was a good choice instead of a PolyPhaser. If anyone is interested in the info, I'll bring my printouts to breakfast this Saturday. Happy trails....

Subject: [laterisersgroup] Lightning arrestor and replacement tubes for low price

I searched the net and found a great buy on lightning protectors and the replacement tubes. They are on the L-com.com website and are very reasonably priced. I bought a 900V lightning protector for $14.99 and S&H is $9.50. You can purchase replaceable gas tubes for $4.99 each. I asked Mark Hershey to look at the specs and he said it was a good choice instead of a PolyPhaser. If anyone is interested in the info, I'll bring my printouts to breakfast this Saturday. Happy trails....

110. FLASH! Little Sisters of the Poor Reject Ohio State University's Football Challenge

Yahoo group: laterisersgroup
Date: 2010-12-02 19:59:46 UTC
From: AE5NO
Topic: 110 Message: 110

In a late breaking story, the Little Sisters of the Poor rejected Ohio State University President E. Gordon Gee's recent comments on their athletic ability. A highly placed source within the Order is quoted as saying, "Ohio State just isn't up to our level of league play." "We play for keeps you know, not just for four years."

Pointing out that the Order has a Higher Power as its Athletic Director and its Head Coach is the Pope, the spokesperson chided OSU President Gee that "You can't top that team."

President Gee was unavailable for comment. Confidential sources at the local hospital reported that the OSU President was undergoing surgery to remove his foot from his mouth. ☐

Darren,

IF you want a great lunch or dinner in the Austin area, check out the Creek Road Café. Its on Hwy 290 just as you are coming into Dripping Springs or ☐The Drip☐ as the locals call it. WE had lunch there on Wednesday. It was great. Not just your ordinary fast food joint.

116. Font with Slashed Zero

Yahoo group: laterisersgroup
Date: 2010-12-03 13:32:49 UTC
From: RonL
Topic: 116 Message: 116

A True Type Font in the Arial Style with a slashed zero for those purists who write it that way. I have uploaded the font file to the files section of the Yahoo Group.

It is easy to install. Just go to the Control Panel and click on the Fonts folder. Then copy and paste the .TTF file into the folder.

The slash zero font will appear as a choice in any program where you have a choice of fonts.

Ron, AE5NO

Hi Michael,
I'm running a fan dipole so the noise levels may be lower than what you see on a vertical or other type of antenna. I have a DSP but had the filters off on 17 and 40. 20 for some reason was an S7 noise level today while 40and 17 were whisper quiet. Seems backward but there ya go... Normally 20 has a lower noise floor.
73,
Damon

132. Canada Winter Contest

Yahoo group: laterisersgroup
Date: 2010-12-15 04:43:32 UTC
From: RonL
Topic: 132 Message: 132

Late Risers,

The Radio Amateurs of Canada are hosting the Canada Winter Contest this weekend on Saturday Dec 18th from 0000 - 2359 UTC.

This is your chance to have some winter fun and get some of those rare Canadian provinces, eh?

They are places with magical names like Nunavut, Yukon and Northwest Territory.

So mush on over to your HF gear from 1800 CST Friday till 1759 CST on Saturday. Why it is almost like skiing but without the exercise.

See the link below for rules:
http://www.rac.ca/en/rac/programmes/contests/files/2010_Canada_Winter_Contest_Rules_English_and_French.pdf

73,

Ron, AE5NO

Good Morning Late Risers!

Next Saturday, December 25th, Poor Richards will be closed. The weekly breakfast for that day is canceled as I imagine that most of us have other plans for that day.

The next Late Risers breakfast meeting will be on Jan. 1st 2011. Poor Richards will be open. Whether you stay up all night or hit the sack early, we will be there to hear of your adventures.

See you next year.

73,

Ron, AE5NO

From: Darren Mende
Topic: 135 Message: 136

Hello All,

www.websdr.org

This website has links to software defined radios (SDR) that are set for receive on a number of bands. Take your pick and see how your signal is doing.

If any one has any questions, feel free to drop me a line. The use of the website does require Java.

73,

Darren

137. 6 meter FM

I installed a folded dipole at 50 feet. It's facing SW. Should work
well in all directions except to the NE of me.
I will try to get my FT2000 on 6 meter FM over the weekend. Let's see
if we can do something
this Wednesday evening when the group is on 6 meter SSB. We can talk it
up at the party.

Larry

To: K5QHD_Garland_ARC@yahoogroups.com
Subject: [K5QHD_Garland_ARC] The PLANO Amateur Klub announces the Annual 2M FM Simplex Challenge --
Date: Tue, 21 Dec 2010 17:26:30 -0000

WHEN: Sunday, February 20, 2011, 2pm to 5pm CST

OPEN to all licensed radio amateurs located within the following Texas counties: Cook, Collin, Dallas, Denton, Ellis, Fannin, Grayson, Hood, Hunt, Johnson, Kaufman, Montague, Parker, Rockwall, Tarrant, Van Zandt, and Wise.

Object: Make as many QSOs as possible with stations located within the counties listed.

Prizes: Plaques will be awarded for the high score in each entry category.
Plaque presentations will be made during the Plano Amateur Radio Klub (PARK) meeting on March 21, 2010.

Entry Categories:

There will be three (3) categories of entries:

Single Operator - Fixed
Single Operator - Rover/Mobile
Multi-Operator - Rover/Mobile

Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. You may not receive assistance from any other person for anything related to the 2M FM Simplex Challenge.

Multi-operator: More than one person performs the transmitting, receiving, spotting, logging functions and antenna adjustments during the 2M FM Simplex Challenge. This allows team entries. Example: One person operates the radio while another person logs the contacts.

Fixed Location: The participant must operate the entire duration of the 2M FM Simplex Challenge from one specific location. This category would also include setting up a temporary, portable station at a remote location, "Field-Day" style.
Rover/Mobile: Participant operates from a vehicle.
Clubs: There will be local bragging rights for highest aggregate score from all of the club submissions.

Frequencies:

The following 32 Simplex frequencies are available for the contest:

145.520, 145.540, 145.560, 145.580,
145.600, 145.620, 145.640, 145.660, 145.680,
145.700, 145.720, 145.740, 145.760, 145.780

146.420, 146.440, 146.460, 146.480,
146.500, NOT .520, 146.540, 146.560, 146.580,
146.600

147.420, 147.440, 147.460, 147.480,
147.500, 147.520, 147.540, 147.560, 147.580
QSOs made through repeaters or on repeater output frequencies are not allowed. Participants making contacts on 146.520 will be disqualified as 146.520 is the National Simplex Calling frequency.

Exchange:
For Fixed stations - Give your callsign and the city from which you are operating. City is the address of your single transmit location.

For Rovers/Mobiles - Give your callsign/"Rover" and the city if you are within a city limits the OR the county if you are within an unincorporated area.

Scoring:
Fixed Location Stations: count as one (1) point for each completed QSO.
Rovers/Mobiles: count as two (2) points for each completed QSO.

Multipliers:
Multipliers for both Fixed Location and Rover/Mobile stations will be:

a) The different number of cities worked

b) The different number of counties worked

c) Your power factor

Cities/Counties Multiplier:

You receive one (1) multiplier for each incorporated city worked
You receive one (1) multiplier for each county (i.e. not in incorporated city limits) worked (A total of 17 counties).
* Rover/Mobile Multipliers will receive an additional multiplier for the total of the different number of cities and counties FROM which they operate.

Power Factor:

RF power measured at the output of the transmitter/amplifier:
a) 10 watts or less (2X)
b) 11 watts not to exceed 50 watts (1.5 X)
c) 51 watts not to exceed 160 watts. (1X)

Note: After all QSO points and city/county multipliers your score will be multiplied by your power factor. 10 watts or less is 2X your score. 50 watts or less is 1.5X times your score. 160 watts or less is 1X your score.
Total score will be the total number of QSO points times all multipliers (power, cities, and counties).

Scoring Examples:

Total score will be the total number of QSO points multiplied by number of unique cities/counties contacted plus number of multipliers. (Example: A Rover works 15 different stations in 9 different cities and 3 different counties, and the Rover transmits from 2 different cities and 1 county. The Rover is running 75 watts (1X).

12 cities/counties contacted, plus 2 cities and 1 county operated from, 75 watts (1X) = 15 total multipliers. 15 QSOs x 15 multipliers = 225 points)

Rovers/Mobiles may be worked for QSO/multiplier credit 1 time for every unique city or unincorporated area from which they operate.

Each entrant's logs must be in the following format: QSO #, Time, Frequency, Station worked callsign, Contact Name, and City OR County, Your City during the contact (important when you are a rover, the same when you are fixed), and Yes or No if new city/county multiplier.

If any of the required information is incorrect or missing from a QSO, that QSO is considered null and void, and no points or multiplier credit will count from that contact.

We may check to see if your log matches your contact's log for that entry. If they are different one or both of you may lose the QSO.
For example if the QSO was on a different frequency or at a different time, you would both lose the QSO.

Rovers/Mobiles may record their participation in the 2M FM Simplex Challenge with an audio recorder and produce an electronic log for the 2M FM Simplex Challenge at a later time. An electronic log must be prepared for submission with all the required information - the recording will not be accepted as a log. Your safety is important to us!

You may enter only one category for the 2M FM Simplex Challenge. If a station gives out more than one multiplier during the 2M FM Simplex Challenge, that station will automatically be entered in the "Rover" category. Exception: If you operate both as a rover/mobile and as a fixed station location, you must submit separate entries for each operation. (Example: You operate mobile while coming home from a party. Once you are home, you operate from your home antenna. In this case, you must submit a separate entry for your mobile and fixed locations.)

Log Submission: Logs must be received no later than 11:59 pm on Sunday, March 01, 2011. Decision of the judges is final. Send logs to: CONTESTS@....

The PARK website in January will have a downloadable Excel log form.
ALL logs must be in our template format in Microsoft Excel so we can automatically score

them. No Handwritten logs or other formats are acceptable.

Questions: Send email to CONTESTS@....

Rules For Rover/Mobile Stations:
A Rover/Mobile is a station that operates from more than one city during the duration of the 2M FM Simplex Challenge.

Rovers will be considered multi-operator if there is more than one person in the vehicle. Rovers may operate with only one callsign during the duration of the 2M FM Simplex Challenge.

Rover vehicles must transport all of the radio equipment, power supplies, cables, antennas and logging tools with them. No equipment of any type may be dropped off at a pre-determined location for use during the 2M FM Simplex Challenge. Rovers may not use pre-existing antennas at any fixed or temporary portable location. You can only use what you bring with you.

Rovers must sign /Rover during the 2M FM Simplex Challenge. Example: "K5USS/Rover, CQ FM Challenge."

A Rover/Mobile shall use the city or town they are in at the time of any given QSO as their city. Mobile/Rovers must be within the city limits in order to give QSO credit for that city.

A Rover/Mobile that is in an unincorporated area shall use the county they are in at the time of any given QSO as their county.

Rovers/Mobiles may be worked for QSO points and multiplier credit one time for each city the mobile operates from. (Example: It is okay if K5ABC works K5XYZ/Rover in Dallas, then works K5XYZ/Rover again when K5XYZ is in Richardson. However, if K5XYZ/Rover returns to Dallas, K5ABC is not allowed to contact K5XYZ again, since K5ABC already worked K5XYZ when K5XYZ was in Dallas.)

Disqualification:

A participant may be disqualified for the following reasons:
a) Poor Amateur Radio operating practices.
b) Violating the terms and conditions of your Amateur Radio license grant.
c) Violating any of the rules of the 2M FM Simplex Challenge.
d) Falsifying any information in their submitted log.
e) Excessive duplicate contacts in their submitting log (more than 10 percent of the QSOs in the log).
f) Rovers receiving a traffic ticket or being involved in a traffic accident during the contest.

Miscellaneous:

All duplicate QSOs must be removed from the log that is submitted. If a log contains more than 1 contact with any given station, the penalty will be a deduction of 3 contacts from your final score. Note that this can affect your multiplier total, too. This penalty will be applied for every duplicate contact found in an entrant's log.
All antennas must be physically connected to the transceiver being used for the 2M FM Simplex Challenge by wires. No remote operation is allowed.

Soliciting QSOs:
2M FM Simplex Challenge entrants should not transmit on repeaters or repeater frequencies during the time of the 2M FM Simplex Challenge for the purpose of soliciting contacts.
2M FM Simplex Challenge entrants should not make cell phone calls or send emails or do texting during the time of the 2M FM Simplex Challenge for the purpose of soliciting contacts.

It is acceptable to put out email blasts and talk up your participation in the 2M FM Simplex Challenge on a repeater PRIOR to the start of the 2M FM Simplex Challenge.
The use of non-amateur communications to make a QSO during the 2M FM Simplex Challenge (i.e.: phone, e-mail, texting, etc.) is not in the spirit of the 2M FM Simplex Challenge.
Only the listed 32 Simplex frequencies may be used during the 2M FM Simplex Challenge.

Operating Tips:
You can either scan the 32 FM simplex frequencies listening for people to work, or you can call CQ on a simplex frequency. We would suggest calling "CQ FM Challenge" so people know that you're participating in the event. It would also be a good idea to open your squelch up, so you can hear weaker stations.

Be sure to check the upper and lower portion of the FM simplex band (145 MHz & 147 MHz). Few people venture outside the 146 MHz simplex bracket, so there's a lot of QRM-free spectrum you can use.

Make sure you copy the information from your QSO correctly. If you miss information ask for a repeat and make sure you spell it correctly. You may want to also verify the time you are logging so you both log the same time. Reporting incorrect information in your log will count as a penalty and disqualify the contact.

READ THE RULES. If you have any questions about anything regarding this contest, ask CONTESTS@... BEFORE the 2M FM Simplex Challenge starts.

Late Risers,

Some of you may know that I wrote a story on ham radio called, The Test a few months back. I submitted it to QST and received notice today that it was accepted for publication. It will appear on www.arrl.org <http://www.arrl.org/> sometime soon.

153. PARK 2 Meter Repeater is now on Echolink

Yahoo group: laterisersgroup
Date: 2010-12-23 03:35:47 UTC
From: AE5NO
Topic: 153 Message: 153
Attachments: 1 described; binary payloads are missing from this source WARC

Thanks to Bruce, N5BYL and Erik, KE5VBO, the PARk 2 Meter repeater now has Echolink capability.

What does this mean? It means you can access the PARK 147.18 repeater from anywhere in the world from any computer with an Echolink capability.

For those of you with those trendy new phones, there is an app for that. There are Echolink apps for the iPhone, the Droid phones and the Blackberry. Just tune your Echolink browser to K5PRK-R and connect.

If you happen to be the more adventurous type with enough equipment, you can set your fixed station radio up as an Echolink Repeater and connect to Echolink through your fixed station via a HT or mobile radio.

The Echolink software and apps are free. There is a short FCC License validation process you must go through before Echolink will work but it is a painless process.

Last week we attempted to use Echolink to transmit the Amateur Radio Newsline program by downloading the broadcast as an MP3 file and hosting that via Echolink. That way we could get away from the balky telephone modem we used in the past. It worked. Echolink offers the potential to be able to offer other programs over the repeater that are available as MP3 files such as technical programs or other issues of amateur interest.

If you haven't tried it, please do so. I think this is a great addition to the PARK repeater capability and is certain to provide increased repeater usage.

Merry Christmas!

73,

Ron, AE5NO

Echolink is great!! For those that have migrated here from other QTH's, it is a good way to stay in touch with some of your old ham buddies. If anyone needs a hand getting it setup, do not hesitate to ask!!

Ron - Fantastic on the article. You have shown here in our little world that you are well spoken and have a few good thoughts. It's about time the rest of the ham world got to hear it ;-)

Cheers!

Darren

Topic: 155 Message: 155
Attachments: 2 described; binary payloads are missing from this source WARC

I want to remind you of the Festivus Special Event station that will be on the air on Jan. 8th to celebrate the Festivus holiday. The official Festivus station, N4FL will be on 20M around 14.260 Mhz from 8 AM - 3 PM CST. They will QSL. Don't forget to air your grievances!

Today is the Official Festivus Day. Although by tradition, Festivus can be celebrated at any time. For those of you unfamiliar with this important holiday, you can get more information on how to celebrate Festivus at http://www.festivusweb.com/

Another cool special event is the Sunrise Festival in Inuvik, Northwest Territory, Canada, celebrating the first day of sunrise. As Inuvik is located 2 degrees north of the Arctic Circle, you can imagine the significance of that day for them! The name even sounds cold. Special Event station VE8SUN will be on the air from Noon, Saturday, Jan 8th through 6 PM Sunday, Jan 9th. Look for that station around 14.250 or 7.250 Mhz.

In any case,

Happy Festivus

Merry Christmas

Happy Chanukah

Happy Kwanza

Did I leave anything out? Happy Holidays!

160. To QSL or not to QSL - What do you think?

Yahoo group: laterisersgroup
Date: 2010-12-27 05:01:09 UTC
From: AE5NO
Topic: 160 Message: 160

Basically, I am a competitive person. I guess that's why I like contests like Field Day, DX contests and Sweepstakes. Even when I am not operating in a contest, QSL's are one way of keeping score or marking progress towards awards. Collecting QSL's can also be a way of remembering interesting contacts or commemorating special events.

Despite the advent of Logbook of the World and EQSL, most people still like to QSL by mail but I found that electronic confirmations are invaluable. There is no guarantee that your paper QSL card will be received by the operator on the other end or whether the return QSL will make it back to you.

LoTW makes applying for ARRL sponsored awards very convenient. When I submitted my application for Worked All States, I only had to submit 13 cards for verification as I already had the other 37 confirmed by LoTW. If you work DX, you will find your QSO's confirmed much quicker via LoTW when compared to mail and it is free.

Call me old fashioned, I prefer paper QSL's but having LoTW confirmation as a potential backup is invaluable.

Here are some interesting (or not) stats from my log. From what I have read, these numbers are better than the averages.

I have 597 QSO's in my logbook today, almost all are HF contacts. Of these I've received 397 QSL's or about 44%. Of all the QSL's 79% are paper. I also use LoTW and eQSL. To date, I received 168 QSL's by LoTW; a confirmed percentage of about 47%. These numbers are not mutually exclusive. I found a lot of hams will QSL by at least two of the following; LoTW, eQSL and snail mail.

In setting up my QSL protocol, I researched what successes other s have had and tried to copy it. So, here it is:

1. I upload every QSO to both LoTW and to eQSL.. I try to do that within 24 hours of completing the contact. While eQSL is not acceptable for ARRL awards, it is good for CQ Magazine awards. Even though the electronic QSL is no guarantee of a reply, my statistics seem to prove that a goodly number of hams will respond both by snail mail and electronically. Even if the paper QSL doesn't make it to you, at least there is the electronic confirmation.

2. Avoid using the bureaus, if at all possible. It's a crapshoot. It can sometimes take 1 - 2 years for a card to come back to you. If at all. Register with the incoming ARRL bureau anyway. You never can tell what the DX guy in the other end will do, so cover your bases.

3. QSL promptly. I usually try to send out cards once a week. If I work a contest, then I try to get those in the mail as soon as the contest ends. I send a paper card out for every QSO in my log, except for those stations I already worked and where I already received one.

4. I prefer to QSL direct unless the other station provides specific details about how to QSL. Some stations will tell you on the air, others will have it on their website or in their QRZ.com listing. When in doubt, QSL direct.

5. Use security envelopes. That way people can't see the contents when the envelope is held up to light. Postal employees on some countries can be nosy.

6. I prepare the cards first, then the envelopes. I print the QSO information and the recipients address from my logging program. I use the 3 across address label sheets that I can insert into my laser printer. I also preprint return address labels on a separate sheet.

7. I prepare the outgoing cards first, using the QSO information labels I printed. Use a #10 security business envelope with the outgoing addressee label and a return address label.

8. I always enclose a SASE with my address along with the QSL in the outgoing envelope for U.S. stations. For DX, I just use a SAE with no return postage. U.S. postage is no good for envelopes mailed from foreign countries. For this reason I enclose a couple of green stamps to pay for the return postage. Foreign postage is very expensive. Most stations prefer cash although some stations will request an IRC instead. For this reason, I also keep a small supply of IRC's too.

9. My return envelopes are #6 security envelopes. They fit easily into the #10 along with the QSL and the green stamps. The whole package QSL, return envelope and IRC or green stamps weigh less that 1 ounce.

10. Use proper postage. For domestic mail or to any U.S. possessions or territories. I use one first class stamp. I prefer the "Forever Stamps", so I don't have to wonder about changing postal rates. For DX, I use 98 cent stamps for overseas mail, except for Mexico and Canada. For those countries two "Forever Stamps" are sufficient. If you are ever uncertain about the correct amount of postage for the destination, I recommend www.usps.com <http://www.usps.com/> .

11. I buy my stamps form www.usps.com <http://www.usps.com/> for several reasons.

a. It saves having to go to the post office.
b. The web site is virtually the only place you can buy IRC's.
c. They have those nice 98 cent international stamps. I don't know if it impresses the recipients but I have a neat little stamp collection from DX cards, so I figure I am paying it forward.

Ron, AE5NO

Late Risers,

Anybody thinking about the Cowtown Hamfest?

Cowtown Hamfest, the original Hamfest in the Fort Worth Metroplex. The event

date, January 14-15, 2011 at Lockheed Martin Recreation Area, 3400 Bryant Irvin
Road, Fort Worth, Texas 76109.

Doors open Friday evening the 14th at 3:00 pm until 8:00pm. Saturday the 15th we open at 8:00am and close at 3:00pm. Lunch, Bar-B-Q sandwiches, is available Saturday at 11:00am. Door prizes will be awarded through out the event. The main prize will be at the events end.

The event will feature large vendor areas over 100 tables and outdoor tailgate flea market.

Several well known commercial vendors will be present.
Special quest Phil Parton, N4DRO Kenwood's National Sales Manager for Amateur
Radio, Educational programs, and VE Testing, will be conducted through out Saturday.

Talk-in is 147.28 tone 110.9. Cowtown Hamfest is sponsored by the Lockheed Martin Amateur Radio Club, W5SJZ and LMRA. Website is located at www.cowtownhamfest.org and personal contact can be made with David Forbes, KC5UYR, KC5UYR@... <mailto:KC5UYR%40compuserve.com> .

Dear Friends,

I received word that Scott, AE5SG was admitted to the hospital today. He is in the critical care unit. As you may know he has been battling a persistent case of Pneumonia. At this time, I do not have any details about his condition. He is at The Medical Center of Plano on Coit Rd at 15th St.

If you would like to keep Scott in your prayers, I am sure it would be a help.

73,

Ron, AE5NO

Late Risers,

Don't' forget breakfast tomorrow as usual at Poor Richards 7AM Park Blvd and Ave K. They will be open.

A free side of Black Eyed Peas will be served with each breakfast order.

Make your first meal of the New Year, HAMS and eggs.

Except for Dave, KE5JCD who will be flying somewhere over the equator, eating airline food. Good Luck Dave!

Late Risers,

I just talked to the nurse on Scott's floor. He is in intensive care and cannot take visitors or receive phone calls at least for today.

However, if you wish, you can call the hospital and leave your name at the nurse's station on his floor and she will let him know you called. There is a chance that he may be able to take calls or visitors tomorrow.

The hospital number is (972) 519-1107. Just ask for Scott Brubaker. They will transfer you to the nurse's station on his floor.

Ron, AE5NO

Unfortunately, I do not have any additional information about Scott's condition or prognosis. As of 1PM today, he is still in Intensive Care, there are no patient phones in that area. I called the family waiting area on that floor but there was no one in the waiting room that could give me any information.

I think the best thing to do for now is to keep sending Scott e-mails to let him know we are thinking of him and to encourage his recovery. A small prayer might be a good thing too.

The e-mail system for patients is
http://themedicalcenterofplano.com/patients-visitors/email-a-patient.dot

If you think about it you might also want to send him a card by snail mail.

I spoke with Scott's daughter this morning. Here is the latest.,

Scott was admitted to the Hospital on Wednesday afternoon. He is still in Intensive Care. This is his sixth day. He was scheduled to have another CAT Scan today. His daughter said he is doing better but is still considered critical.

She said that he is getting the e-mails and it is a good morale booster for him. So let's keep sending those periodically.

No, you are confusing it with the WAB (Worked all BBQ Joints). To win this award, you must submit a menu from at least one BBQ Joint in each state. I hear that New York is the toughest state to get confirmed.

196. Scott, AE5SG Update

Yahoo group: laterisersgroup
Date: 2011-01-06 13:29:15 UTC
From: AE5NO
Topic: 186 Message: 196

Late Risers,

Last night I sent a brief note from my cell phone regarding Scott AE5SG and his condition. Here is a fuller explanation.

Scott's daughter called me last night. He is improving slowly. His heart has been affected by the strain from the pneumonia. On Tuesday, he had a large volume of fluid drained from his legs and lungs which has helped reduce the strain on his heart and lungs. After a CAT scan earlier this week, they discovered a couple of blood clots and a restricted artery. As a result, he had a stent placed in an artery and is being treated with anti-clotting medication to dissolve the clots.

He is still listed as critical but his daughter said he is slowly improving but has lost a lot of weight. Who wouldn't on hospital food? He is awake and he gets lots of e-mail every day, which he enjoys, reading. His daughter said that the nurses on the floor were jealous because Scott gets more e-mail than they do.

This morning, he is being transferred to Baylor Hospital in Dallas. As his heart condition is now the primary concern, Baylor has the best cardiac unit in North Texas. I take this a positive sign. His prognosis is good but I personally expect a long recovery. Scott's brother is coming in to town today from Missouri to help his daughter as needed.

Please keep Scott in your prayers and thoughts for a safe and speedy recovery. As soon as I have information on how to contact Scott, I will pass it along.

Thanks to you all for your support of Scott.

73,

Ron, AE5NO

Kip,

Will do. As soon as I can find out. I know he would like to have his HT from home but while he is in ICU, I am pretty sure that is a no-no.

His daughter said that he is still pretty weak from the stent surgery earlier this week. I would love to get his HT into him but we might have to wait till he gets into a regular room.

As soon as he's able, it may be easier to get a laptop into the hospital than a 2m radio. Laptop and a headset (and internet) and he could jump on EchoLink.

I called the hospital and asked around, and as soon as he can receive visitors, we can bring him a laptop equiped with a headset and Echolink because he has internet in his room. The powers to be said that this would be fine with them, no problemo. It all hinges around Scott getting out of ICU, and finding a laptop that can be spared.

Scott already has an Echolink login. We just have to get him a laptop and
some headphones.

Cc: KE5VBO - Erik
Subject: Re: [laterisersgroup] Scott, AE5SG Update/Echolink

I called the hospital and asked around, and as soon as he can receive visitors, we can bring him a laptop equiped with a headset and Echolink because he has internet in his room. The powers to be said that this would be fine with them, no problemo. It all hinges around Scott getting out of ICU, and finding a laptop that can be spared.

Michael - KE5TJL

On 1/6/2011 11:41 AM, KE5VBO - Erik wrote:

As soon as he's able, it may be easier to get a laptop into the hospital than a 2m radio. Laptop and a headset (and internet) and he could jump on EchoLink.

Erik

On Thu, Jan 6, 2011 at 9:42 AM, AE5NO <ae5no.ron@...> wrote:

Kip,

Will do. As soon as I can find out. I know he would like to have his HT from home but while he is in ICU, I am pretty sure that is a no-no.

His daughter said that he is still pretty weak from the stent surgery earlier this week. I would love to get his HT into him but we might have to wait till he gets into a regular room.

Keep us updated on his new email address.

Does he want a 2m radio while he is in?

214. Scott Brubaker Update, Sunday 1/9/11

Yahoo group: laterisersgroup
Date: 2011-01-09 17:46:01 UTC
From: ke5tjl_michael
Topic: 214 Message: 214

Good news everyone! Scott has been moved from ICU at Baylor Hospital in Dallas to his room in the Roberts building, Room 1031. He is answering his phone and talked real briefly with me. He is allowed visitors, but he said to watch out for the weather. Can we get together that borrowed laptop loaded with EchoLink and a headset or microphone and get it to Scott? He has free Wi-Fi access from his room and I'm sure he would greatly appreciate it! I called the hospital patient information number to verify that Scott has free access, and they said yes. Everything looks like a go! I plan on going to see him as soon as the weather allows, but not today. If I can be of any help, call me at 972-658-4904.

73,

KE5TJL Michael

Hello,

I didn't catch the previous discussion on who has what to loan out. I have a nice set of headphones with a mic boom and a netbook that I can loan out if need be. Just contact me at my regular e-mail (andy.knepler@gmail.com) if you guys need them.

Thanks,

Andy Knepler WA5UP

Alas, the hospital router is not pnp, so no way to open up the Echolink port. He does have internet access so should be up on e-mail. And we set him up on Skype--tigerfanintexas.

Good spirits and definately feeling better. I think most of the poking and prodding and some other things i'll leave for him to detail are mostly behind him. He's hopeful for early release for good behavior late this week. Several rather attractive care-givers so 'good behavior' may be a bit iffy.

Hey Y'All,

please join us tonight on 2M simplex. We will start the evening on
146.540 FM at 8pm and move around at the whim of those that join us.
There are regulars throughout the greater Plano/Allen area, so you will be heard.

See ya then~

73,

Darren

I'm sorry to have to report that some local user broke 146.54 MHz.
For those with digital displays simply use some white-out to cover up
part of the last 4 digit. It's an easy mod to turn it into a 1.
Then you are good to go on 146.51. No soldering required. Look for
this mod in Hints & Kinks column of the April issue of QST.
Hopefully the RF gods are busy at work repairing the ether for that
frequency.

My 6 meter folded dipole is down as its close proximity to the 144/440
MHz antenna was causing radio problems.

I cranked down my big tower today to install the 6 meter folded dipole
at the top but the winds pick up too much to make it safe to do so.

Hopefully everyone will be on 2 meters for a while.

I'm going to San Antonio this weekend for Amateur Radio Fiesta. I
will report back on the hamfest.

Late Risers,

For those of you OLD enough to remember and for those who are not.

Leo Meyerson was the owner of World Radio Laboratories in Council Bluffs, Iowa. Back in the 40-60□s, WRL was a leading supplier of Ham Radio gear.

Check out this web site http://www.w9wrl.com/wrl/ for some interesting photos

World Radio Laboratories, WRL, was a major supplier of amateur radio <http://en.wikipedia.org/wiki/Amateur_radio> equipment from the 1950s through the 1970s. WRL was located in Council Bluffs, Iowa <http://en.wikipedia.org/wiki/Council_Bluffs,_Iowa> , and run by Leo Meyerson (W0GFQ) and his family.

<http://en.wikipedia.org/wiki/File:Wrl.png> Wrl.png

<http://en.wikipedia.org/wiki/File:Wrl.png>

WRL manufactured some of its own products, notably under the Globe and Galaxy brand names.

The Globe emblem first appeared on products made by World Radio Labs with the 1948 model Globe Champion transmitter. The early units produced 150 watts input on phone or CW with coverage from 10 to 160 metres, and was a two section unit complete with power supply. The RF section sold complete with tubes, power supply, panel, and one set of coils as a kit for $149, and wired for $159. The speech amplifier and modulator sections were sold separately. This unit was the beginning of a long line of rigs from WRL Globe through the 1950s including the Globe King, Globe Scout, Globe Chief, and the first sideband rig, the Globe SideBander -- a double sideband transmitter.

In 1960, the Globe line was sold to Textron. Globe/Textron and RME/Electrovoice merged in 1962, with the result named GC Electronics, a division of Textron. GC Electronics is still in business today.

On Feb 24th QCWA Chapter 154 in West Palm Springs is celebrating Leo's 100th birthday.

So here's the plan, take a QSL card, write 'Happy 100th Birthday Leo' on it and send it to:

Leo Meyerson, W0GFQ
19 Park Lane
Rancho Mirage, CA 92270

Gene Pentecost, President of Chapter 154 will make sure they get to the party so everyone that attends can enjoy them.

One last thing, tell every ham you know to do the same thing, QCWA member or not. Spread the word, at every radio club meeting you attend, at every net you check into.

I want Leo to get hundreds, maybe even thousands of cards.

tnx es 73,
Bob Roske, NØUF
QCWA President

Ron, AE5NO

I had one in Houston. Still have it but don't use it . The big problem
for me was keeping a computer running 24/7 just to have phone service.
Eventually, I set it to forward all my calls to my cell phone. Now I don't
have to have it on anything. It is juast in my desk drawer.

The outgoing phone patch for the PARK repeater uses a MagicJack. This saves our monthly long distance bill and it seems to be fairly reliable.

I know we are using this at the repeater site, but have never tried it myself. From what I understand, it runs on the standard SIP protocol, so you can actually take old discarded SIP equipment (vonage maybe?) and change the settings to match MagicJack, and use it in lieu of keeping the PC on 24-7. Might be a fun project???

I saw a great show on National Geographic Channel this week. It is an episode of Naked Science, called Star Clock BC. It is about the Antikythera Device, a mechanical computer that calculates the relationship of the sun, moon, and pallets. It is dated to circa 100 BC.

It is on NCG next Monday 1/24 at 1am.

Thanks for the heads up on the program, sounds like a cool show to watch. Does anyone know of someone who has some old computer core memory that is taking up space and wouldn't mind parting with some? I would like to get some, enough to put in a 5x7 or 8x10 frame and hang on the wall as computer art. If anybody knows ofsome, please give me a shout.

I scorn social networking in general and didn't expect to see this movie, but I did. Knowing nothing about it other than a brief mention it existed, I was delighted with the opening sequence and credits and knew I was going to enjoy the movie from that point, because these two guys had their hand in the film. It would have been an instant sell to know this in advance.

Director: David Fincher (Fight Club, Se7en). These were two of the most striking movies of the late 1990s, subject matter and content wise for certain, visually a secondary factor. I picked up on the feelings of visual setting and cuts pretty quickly. Shares the same cinematographer as Fight Club.

Screenplay: Aaron Sorkin (Sports Night, The West Wing). IMO Sorkin is a master of characters, their interactions, and pacing. Sports Night was unfortunately canceled after two seasons, and is worth checking out. It's a comedy-drama, and they were able to remove the laugh track for season two, which greatly amplified the work. Sorkin has multiple Emmys and awards for the West Wing; unfortunately I never watched it, so I don't have much to say about it.

I'm sorry you didn't enjoy it Ron. It was a one-time movie for me. I'm not going out of my way to see it again, but I enjoyed it and would recommend it.

See you all at breakfast.

Tonight I fired up the SB-200 for the first time. With the new power supply board in there and a couple other mods suggested by some hams who have done this before. I put it on the variac and brought it up to full voltage gently.

Just a smoke test to see how she would react to power for the first time in 20 or so years.

It's alive!!!!! The tubes lit up, the fan purred softly, no pop, pop, fizz, fizz noises from the system. No blown breakers either. Plate voltage about 2500 VDC. A thing of beauty!

My wife clearly did not understand the excitement of the moment. I tried to explain that it was roughly akin to a kid working on his first 54 Chevy day after day until he finally got to turn the key and started the first time! Hmmm. All I got was, "That's nice dear."

258. A Little Humor First

Yahoo group: laterisersgroup
Date: 2011-02-23 17:45:11 UTC
From: AE5NO
Topic: 258 Message: 258

After 35 years of marriage, a husband and wife came for counseling.

When asked what the problem was, the wife went into a passionate, painful tirade about Ham Radio, particularly the McKinney Amateur Radio Club and how it caused every problem they had ever had in the years they had been married. On and on and on: neglect, lack of intimacy, emptiness, loneliness, feeling unloved and unlovable, an entire laundry list of unmet needs she had endured while he locked himself in the "shack".

Finally, after allowing this for a sufficient length of time, the therapist got up, walked around the desk and after asking the wife to stand, embraced and kissed her passionately as her husband watched with a raised eyebrow. The woman shut up and quietly sat down as though in a daze.

The therapist turned to the husband and said, 'This is what your wife needs at least 3 times a week. Can you do this?

'Well, I can drop her off here most every day, but on every 2nd Sunday of the months I am MARC NET Control."

Tnx to the McKinney ARC Yahoo Group for this little laugh.

259. Late Risers. . . Help Defeat this bill

Yahoo group: laterisersgroup
Date: 2011-02-23 18:41:42 UTC
From: AE5NO
Topic: 259 Message: 259

This proposed legislation has a direct effect on our use of the 70 CM band. As an organization and individually, we should oppose it.

On February 10, 2011, Rep. Peter King (R-NY), Chairman of the House Homeland Security Committee, introduced H.R. 607, the "Broadband for First Responders Act of 2011," which has been referred to the House Energy and Commerce Committee (which handles telecommunications legislation). The bill addresses certain spectrum management issues including the creation and maintenance of a nationwide Public Safety broadband network.

As part of that network, the Bill provides for the allocation of the so-called "D-Block" of spectrum in the 700 MHz range for Public Safety use.HR 607 uniquely, provides for the reallocation of other spectrum for auction to commercial users, in order to offset the loss of revenue that would occur as the result of the allocation of the D-Block to Public Safety instead of commercial auction. H.R. 607 lists, among the bands to be reallocated for commercial auction within ten years of the passage of the Bill, the paired bands 420-440 MHz and 450-470 MHz.

The inclusion of most of the Amateur 70-cm spectrum as one of the replacement bands is a major problem. The 420-440 MHz band is not Public Safety spectrum and should not be included in any spectrum swap of Public Safety allocations

While the ARRL and all Amateurs support the work of Public Safety and recognize their need for dedicated spectrum which would promote interoperability, the ARRL vigorously opposes HR 607 in its present form. HR 607 is a direct threat is a direct threat to our limited spectrum and the ARRL encourages all amateurs to appropriately voice their opposition to this bill.

The ARRL has provided a sample letter that can be sent to our Representative and to both Senators that expresses our opposition to this bill. A sample is attached. As individuals we should send letters to the appropriate people as suggested. A copy of the suggested sample letter is attached

Download <http://www.arrl.org/files/file/Advocacy%20Sample%20Letters/607%20%20opposition%20final%20draft%203.doc> the sample letter here

After downloading the letter, you should personalize it to include the name and address of your representative at the top and your personal contact information at the bottom.

Find <http://www.arrl.org/contacting-your-congressional-representatives> your Representative's contact information here.

Once you have finished editing your letter, we request that you send it our Washington representative at Chwat & Co. This allows your letter to be hand-delivered to the appropriate legislative offices without a lengthy delay. It takes between 6 and 8 weeks for letters mailed through the regular US mail to clear secuirty screening off-site before being delivered to Congressional office.

You can find the <http://www.arrl.org/contacting-chwat-and-co> contact information for sending your letter to Chwat & Co. here

The ARRL has a lobbyist in DC that can hand deliver these letters to each representative, which they claim has the most impact on the legislators. I suggest that the BOD vote on sending such letters as the voice of the club and that we encourage members to write similar letters as well. The letters should be addressed to your legislators but mailed to

262. Small Transmitting Loop

Yahoo group: laterisersgroup
Date: 2011-02-26 16:16:51 UTC
From: kd5tan
Topic: 262 Message: 262

A presentation about magnetic loop antennas, specifically the shortcomings of traditional design and their attempt to create one with better performance and cheaper design cost using wide aluminum flashing. Contains references to various calculators and existing loop designs along with performance charts for these antennas.

The advantages to a small transmitting loop: noise rejection from point sources and physical size compared to dipoles

The disadvantages: high loss, narrow bandwidth without retuning at the antenna, ease of construction compared to dipole

http://midnightdesignsolutions.com/MidnightLoop/index.html to the PDF download link.

From: AE5NO
Topic: 267 Message: 267

At this time, I am QRT from this location. I had planned to take down the HF gear after the ARRL DX Contest but no go.

The property management company is going to have prospective renters in here for the next four weeks during the day. So between that and all the moving prep and work that has to get done, I have reluctantly decided to pull the plug, except for VHF mobile operation.

I was hoping to be able to get the SB 200 on the air this weekend but there is too much going on and I certainly don't want to rush things. I will be finishing up the mods and testing them as best I can but full power live ops will have to wait. If you were as old as that amp, you'd want to go slowly too..

I will still be around for breakfast and for consulting but otherwise, I am shut down till I get to Houston.

269. FT-920 HF Rig to Loan For HF Contest

Yahoo group: laterisersgroup
Date: 2011-03-03 16:48:45 UTC
From: Andy
Topic: 269 Message: 269

All,

If there are any ham's out there that are licensed for HF but don't currently have an HF rig, I have a Yaesu FT-920 that I can loan you for the weekend if you are interested in working the contest. All that I ask is that you treat it well and and keep it in a smoke free environment.

Let me know if anyone is interested.

Thanks,

Andy WA5UP

270. Field Day 2011 Coming Soon

Yahoo group: laterisersgroup
Date: 2011-03-04 06:11:18 UTC
From: Darren Mende
Topic: 270 Message: 270

Hello to All,

It is the first week of March and June 25-26 seems a long way off. But, the weather is starting to warm, the birds are chirping, and there are Hams in the park. 2010's FD festivities were great for the P.A.R.K. and the club wants this year to be even better. This is where YOU come in.

1. Do you have a great idea for Field Day that you've seen elsewhere or have been sitting on for a while?

2. Are you wondering what you can do to contribute to the best Field Day in North Texas?

3. Are you willing to help out your fellow club members for a while over the best Saturday and Sunday of the summer?

I hope many of you will answer YES to one or more of these questions. Your fellow club members will benefit from and appreciate even the most basic gestures. As a team, we will be able to put together an unforgettable weekend for both new and seasoned Hams.

As the point person for this year's Field Day, I have the honor of picking up the reins from the well established and dedicated groups that came before me. This does not mean that we can rest on our laurels and assume that the job is already complete. It is far from complete and that is why I am requesting your input right now.

If there is something specific that you can contribute, be it time, equipment, or other resources, contact me right away. The sooner we, as a group, get the details of Field Day ironed out, the better prepared we will be to have one of the best Field Days the club has ever had.

Send me emails directly with any questions or comments. Over the next couple of weeks I will be setting up a meeting for all of those that are interested in being involved.

Thank you all in advance for what will be a great Field Day 2011.

73,

Darren

From: AE5NO
Topic: 271 Message: 271

Courtesy of the NW ARS Group in Houston:

Contesting is not for everyone and should not be undertaken by anyone with an easily-bruised ego or who needs a completely clear frequency. Consult your doctor to see if you're healthy enough to have contests. If you sustain a pileup lasting more than four hours, consult the record books immediately. If you experience euphoria or a heightened sense of operating ability, listen to the station holding the band edge for several minutes to return your normal sense of inadequacy.

275. DX Contest

Yahoo group: laterisersgroup
Date: 2011-03-07 04:09:38 UTC
From: AE5NO
Topic: 275 Message: 275

Late Risers,

What a weekend!

Just wanted you to know how the DX contest turned out. A total of 89 Q's. I worked a few contacts on Friday night on 40 meters and about 40 Q's on Saturday. Had a nice dinner with my wife Saturday evening but I was hooked.

So fired up the vertical in my backyard Sunday morning. Made another 40 contacts mostly on 10 meters and a little 15 meters and 40. 40 was hot and the Caribbean was coming in. I must have worked most every rock sticking out of the water. At least it felt that way. My claimed score was 17892. Not gigantic but I am very happy.

Wow! 29 new countries over the weekend.

40 Meters was open early Sunday AM. Worked two stations from Japan on 40 meters around 5 AM Sunday AM. Got both on the first call. Worked a boat load of Caribbean stations on 40.

Then 10 meters was open all day Sunday from home on the vertical. To Europe and South America. I didn't operate all day because I had to help the XYL pack but I could get on sporadically during the day.

Here's the new countries I added:

Angola

Anguilla

Antigua & Barbuda

Bahamas

Balearic Islands

Barbados

Bermuda

Bonaire

Cyprus

Greece

Haiti

Honduras

Hungary

Iceland

Ireland

Isle of Man

Japan

Martinique

Montserrat

Norway

Sint Maarten

South Africa

St. Kitts & Nevis

St. Vincent

Switzerland

Senegal

Suriname

Turks & Caicos

Uruguay

As a sometimes student of history, I am often more interested in the place I contacted than I am in making a lot of contacts. You have to know that amateur radio is the greatest hobby ever.

What a gas!

Just got this from a friend...
*A Real Texas Lady***

*One day, a very gentle **Texas** lady was driving across a high bridge in *
*Austin** . As she neared the top of the bridge, she noticed a young man
fixin to jump....*
*She stopped her car, rolled down the window, and said, "Please don't jump!
Think of your dear mother and father."
**
He replied, "My mom and dad are both dead; I'm going to jump." *
*She said, "Well, think of your sweet wife and precious children."
**
**He replied, "I'm not married, and I don't have any kids."
** *
*She said, "Well, then You just remember the **Alamo** ."
**
He replied, ''What's the **Alamo ?''
*
*She replied,..... ''Well bless your heart,....just go ahead and jump you
little
Yankee bastard!''*

From: Darren Mende
Topic: 288 Message: 288

Hello All,

This is a great weekend to rack up some DX QSO's. The Russian DX contest os in full force until 7pm tomorrow (Sunday). The exchange is 59 + serial number, which is just the sequential number starting from 001. So, the 15th contact would be - 59 - 015. 20M and 15M have been really good today and I just had a QSO with a Polish station.

Have fun and get some DXCC under you belts. Any questions, just ask the group!!

Michael,

5-9 is the RS (readability and strength) that is used for most DX and contests. So every station in a contest is 5-9. In this particular contest, you have to add a sequential number, or serial number, to the end. Hence, the 1,063 would be 5-9/1,063.

Below is a link for a good description of RS(T).

Topic: 310 Message: 310

For those of you that live in HOA's, here is the relief we have been hoping for. http://sanantoniohams.org/blog/

A bill has been filed in the Texas legislature that would eliminate most antenna restrictions in HOA's. Even if you don't live in a HOA restricted areas, please read this and give your support to this bill on behalf of other hams. The bill is similar to the one filed in the last legislative session but ran out of time.

Get ready to support this effort by finding your Texas State Senator and Representatives are in Austin. It is a little early to start writing letters but I am asking you to get ready

Yahoo group: laterisersgroup
Date: 2011-03-25 11:58:13 UTC
From: Michael Payne
Topic: 305 Message: 311

Hi, Mark!
Walter said that his plans have changed and can't make it to Tanners after all, so would you mind picking me up a cable? I need a RS-232 cable. It needs to be a 9-pin male to USB cable.It costs around $10 and I'll pay you Saturday morning. I sure do appreciate it. Give me a call at 972-658-4904 if you need to. Thanks Mark!

--- On *Sat, 3/26/11, Gloriarlaroche*

From: Gloriarlaroche
Subject: A well written Police report.

Agusta, GA
Orville Smith, a store manager for Best BuyinAugusta,Georgia, told police he observed a male customer, later identified as Tyrone Jackson ofAugusta, on surveillance cameras putting a laptop computer under his jacket... When confronted the man became irate, knocked down an employee, drew a knife and ran for the door.

Outside on the sidewalk were four Marines collecting toys for the "Toys for Tots" program. Smith said the Marines stopped the man, but he stabbed one of the Marines, Cpl. Phillip Duggan, in the back; the injury did not appear to be severe.

After Police and an ambulance arrived at the scene Cpl. Duggan was transported for treatment.

The subject was also transported to the local hospital with two broken arms, a broken ankle, a broken leg, several missing teeth, possible broken ribs, multiple contusions, assorted lacerations, a broken nose and a broken jaw...injuries he sustained when he slipped and fell off of the curb after stabbing the Marine.

Now that was a well written Police report.

315. Need antenna help this weekend

Yahoo group: laterisersgroup
Date: 2011-03-30 18:24:58 UTC
From: Andy
Topic: 315 Message: 315

Late Risers,

I have a 4.5' glen martin "roof tower" that currently supports my Force 12 6 element beam. I just received my new Mosley beam, and I'd like to get them swapped out this weekend.

Of course, the new beam shipped in about 1000 pieces, so it will need to be assembled and tested first.

I'm hoping to get some extra help this weekend, so if anyone is available, for any amount of time, please let me know. I'm sure there will be plenty of work for people of all experience levels and abilities.

You can contact me directly at andy.knepler@..., or by phone / txt at 214-288-5354.

Thanks in advance,

Andy Knepler -- WA5UP

316. Field Day 2011

Yahoo group: laterisersgroup
Date: 2011-03-31 02:33:36 UTC
From: Darren Mende - K5QB
Topic: 316 Message: 316

Good Evening Fellow Amateurs,

Field Day 2011 is closing in on us and the excitement is already being felt by our club members. As the FD coordinator for this year's event, I have been speaking with club members about ideas and how to best make FD a success. We have a number of good ideas, a bunch of dedicated people that have stepped up to tackle FD challenges, and some equipment that has been promised for loan. This is a good start, but we are far from laying down our collective pencils and resting with what we have.

With all of that said, I will be announcing a date in the near future for a planning committee get-together. We will meet at one of the local restaurants that is near and convenient to the church where the PARK meetings are held, near Coit and Park in Plano. If you've ever wanted to be on a committee or just have some great ideas, we want you to be involved. FD 2011 can be as big or as small as we all decide it should be. At a minimum, we will have a great time and an experience to remember for years to come.

In the mean time, if anyone has any immediate concerns or grand ideas, feel free to contact me directly or post a response to any one of the bulletin boards that are in use. We have some good people in this club with some really great ideas. it is up to all of us to make this a great FD.

319. E-mail issues

Yahoo group: laterisersgroup
Date: 2011-03-31 11:31:52 UTC
From: AE5NO
Topic: 319 Message: 319

I switched to ATT Uverse service. Apparently their network has issues with certain other e-mail servers.

I have three GMAIL based addresses. Two of my e-mail accounts have the standard Gmail configuration, and work fine.

The third, ae5no.ron@... would not work on the SMTP Outgoing side. After some research, I finally discovered the solution: I changed the server info to googlemail.com instead of gmail.com. So now I have two addresses going through gmail.com and one through googlemail.com from the same physical location. GO figure.

Late Risers. This will be my QTH for Field Day.

A group of us will be operating 1A at the end of the Texas City Dike from an RV with a crank up tower. The Dike projects about 4 miles into Galveston Bay, so we will be surrounded by seawater on all sides.

It was severely damaged during Hurricane Ike and just re-opened this past September.

Late Risers,

Well, I took the plunge and joined a club down here. The Brazos Valley ARC is a little larger than PARK about 200 members. www.bvarc.org. Check out their website.

Members come from all over Houston but they meet in a part of town that is about 20 minutes away; south and west of my QTH. They are involved in a lot of community activities but many of them are HF guys that like to operate.

They are supporting the Museum Ships Weekend event, June 4-5th which I will be working.

First time I will be operating from a Submarine (USS Cavalla) and a Destroyer Escort (USS Stewart). We will actually be operating from the original radio rooms on these ships. Although the rigs will be modern equipment, we'll be using the original longwire antennas. Listen for KK5W on on 40 or 80. We'll be setting up on Friday afternoon and running until Sunday about 3 PM.

Some pretty cool ships will be participating this year. Check out the list at http://www.nj2bb.org/museum/

See you at HamCom too!

73,
Ron, AE5NO

347. Welcome Letter

Laterisers,

I got a nice welcome letter and brochure from my new club. Its not fancy, just home made. I thinking there might be an idea that PARK could use, so here it is. Maybe some one would be able to pass out the brochure at some public event like. . . .Uh . . .HAMCOM!!

I was shocked to see that the MCKINNEY club gets the privilege of running the talk in to the biggest ham radio event in Plano. What's up with that?

Hey Ron,

Sounds like you're having a blast!! I will be looking for you in the air, though you'll be submersed :-0

Keep the info coming, it is nice to know what you have cookin down there. Also, let us know if you want to try working HF anytime. I am sure that some of the fellas will be willing to take a whack.

Hey Darren,

Good to hear from you. I will be looking for you from the sub . We will be on the surface some of the time :-)

Scott was a big help with my antennas and especially getting the feed lines into the house. Scott put in extra rope down the interior wall so it will be easier to bring in more feed lines when I get the beam up HIHI. Ask him. He was crawling all over my attic. I could have never done it.

I still have to re-tune the vertical although I was able to make some contacts to Florida last week.

Tonight I am working on dressing up the cables where they come into the shack. I'm using RG-8/u, looking toward the day when I have the amplifier up. I put in a quadruple utility box in the wall with a custom drilled plate. That way I have the space for more feed lines.

I'm setting up an antenna switch so I can switch antennas between the 7000 and the 718.

Looking forward to Ham Com.

350. RE: [laterisersgroup] FW: QSL Card

Yahoo group: laterisersgroup
Date: 2011-05-08 23:36:34 UTC
From: AE5NO Ron
Topic: 99 Message: 350

Walter,

Every QSL Card is different as you can see from my QRZ.com page. My cards have evolved over time :-)

We are in CQ zone 4 ITU Zone 7

My current QSL has a photo on the front with my call sign.

All the vital info is on the back. I have my address, grid square, county, CQ and ITU zones in addition to the contact info. Also a check box for PSE or Tnx QSL. And room for a comment, if the QSO was memorable. Here are some sample card backs you can get some ideas from:
http://www.qslworks.com/back.htm

I usually send my cards in a regular #10 envelope and enclose a #6 SASE and the card. For DX, I just enclose a SAE #6 envelope as US postage can't be used to send mail back to the US. I usually out in two green stamps or 1 IRC along with the card and the IRC.

When I am sending cards to a foreign address, I use the 'secure" envelopes so you can't see what is inside, especially if am enclosing green stamps or an IRC to pay for return postage. A lot of third world countries have postal services that would rather keep the green stamps than deliver the envelope. For that reason, I do not put any call signs on the envelope either.

International postage is expensive. USPS.com has a postage calculator on its web site, if you are ever in doubt as to how much postage is needed for outgoing QSL's. For Mexico and Canada I use two forever stamps. For the rest of the world its 98 cents. I try to use a handsome stamp on my outgoing DX envelopes. I amassed a pretty good collection of stamps from foreign countries and I feel I am returning the favor. It makes a nice present as a number of Dx'ers I found, have similar stamp collections. And maybe it even motivates them a little to send me a return card sooner rather than later.

I buy my stamps and IRC's from USPS.com. They have a nice 98 cent international postage stamp with a picture of the Grand Tetons. I don't know if you can get that from the local
P.O. You can forget about buying IRC's from your local post office . The clerk will look at you like you are some weirdo, especially if you try to explain what it is for.

This is probably more info than you wanted but I couldn't help it. See you at Ham Com.

I kind of know this guy from my involvement with the Houston Rodeo. He is a big shot. I am just a peon. He is a big time car dealer/tire dealer in Houston. Got a ranch in Hempstead TX. That's where the shack is located. NO HOA :-).

I actually worked him during the Texas QSO party last year.

From: Darren Mende - K5QB
Topic: 354 Message: 354

Volunteer for Field Day! 2011

We need volunteers to help with the Plano Amateur Radio Klub's 2001 Field Day. Even if you cannot participate on that weekend, you can help make Field Day a success for the club by signing up for one or more of the support activities.

If you can help, sign up by sending an e-mail to me, k5qb@...
Indicate your name, call sign and contact info AND the area(s) that you wish to assist with. Don’t be bashful; you can sign up for more than one thing, you know.

WE are not out to “Own the Podium”, We want to make this fun filled weekend for all. I look forward to having everyones help and input. Print a copy of this email to use as a personal list and invite others that you think may want to attend.

Darren, K5QB

We need help in the following areas:

1. Operating – Work one or more of the following periods during Field Day.

1. Site Set Up

2. Saturday Afternoon

3. Saturday Evening

4. Saturday Night – Night Crawlers Shift!

5. Sunday Morning

6. Sunday Afternoon Tear Down and Clean Up

2. Operator Scheduling

1. Set Up and maintain schedules of operators

2. Shifts/Shift Captains (Control Operator)

3. Walk-ins list

4. Greeter

3. Special Activities

1. GOTA Station

i. Need support for Andy - WA5UP

2. Copy W1AW Message

3. Send Section Manager Message

4. Educational/Informational Sessions for the public

i. Need ideas and short presentations

4. Radios

1. Assist in the procurement and preparation of Radios for Field Day

i. They may be club owned equipment

ii. Equipment loaned from members

2. Prep Radios for Field Day,

i. Test Operation of radios

ii. All Accessory equipment

iii. Prepare operating instructions

3. Set Up/Tear Down Radios and pack for storage

4. Return loaned equipment to owners

5. Antennas

1. Assist in the set up and tear down of antennas

2. Cable Runs

6. Facility

1. Layout

i. Tables and chairs

ii. Layout power, antenna and computer cables

2. Procure and set up tables and chairs

3. Need visitor control flow- so they can see what we do but not get in the way or cause a safety problem

4. Generator & Fuel Placement

7. Food

1. Need a menu and cost budget for Saturday evening Dinner and Saturday AM Breakfast – Scott and Rusty

2. Transport Eric's refrigerator

3. Procure food and associated items

4. Snack, coffee, soft drinks for night crew

5. Cooks to assist with the above

8. Computers - Eric

1. Procure Computers

2. Install logging software in advance

3. Test all computers and network in advance

4. Remove logging Software

5. We may need more laptops

9. Training

1. Organize training classes

i. Field Day operations

ii. Training with club purchased radios

2. Simple Operating instructions(Laminated) for each
Operating position

3. Laminated Band Plans

10. Safety

1. Inspect facility for possible hazards

2. Antenna Safety for visitors

3. Placement of Warning placards near antennas and cables

4. Safety Training for members

11. Publicity - Andy

1. Field Day Signage

2. Announcements

i. Church program for that weekend

ii. Church Web Site

3. Amateur Radio Material/ Handouts

4. Press Release

5. Schedule Media Visit?

6. Schedule Dignitary Visits

i. Elected Official

ii. Served Agency

7. Arrange for Field Day Souvenir for dignitaries and Media

i. Coffee Mug/T-shirt/Cap

8. PARK golf shirt or name badge on Sunday

12. Photography

13. Logistics

1. Need drivers to pick up and deliver material

i. Before/After Field Day

ii. Field Day Set Up/Tear Down

iii. During Field Day

2. Maintain Generator fuel Supplies

3. Ice

4. Soft Drinks

5. Other

355. Saturday Morning Breakfast

From: Darren Mende - K5QB
Topic: 355 Message: 355
Attachments: 1 described; binary payloads are missing from this source WARC

I know there are a couple of breakfasts that occur on Saturday morning and I don't want to discourage anyone from going to Tony's Cafe (Alma and Spring Creek), but I will be at Poor Richards in Plano (Park and Ave K) Saturday morning. If you have some interest in volunteering and would like to speak with me personally, feel free to drop by for a few minutes to say HI. We get rolling over there at about 7am and are there until 9am or so.

There are a number of PARK members that will be involved in FD present at Poor Richards and it will be a good way to meet some of them as well. As I mentioned in the volunteer letter, I am always available via email or phone, so feel free to contact me if you cannot make it on Saturday morning.

For those of you that will be at Tony's, I would love to get some feedback from the group over there. Any ideas or suggestions are welcome regardless of where you drink your Saturday coffee ;-)

6. Sunday Afternoon Tear Down and Clean Up

2. Operator Scheduling

1. Set Up and maintain schedules of operators

2. Shifts/Shift Captains (Control Operator)

3. Walk-ins list

4. Greeter

3. Special Activities

1. GOTA Station

1. Need support for Andy - WA5UP

2. Copy W1AW Message

3. Send Section Manager Message

4. Educational/Informational Sessions for the public

1. Need ideas and short presentations

4. Radios

1. Assist in the procurement and preparation of Radios for Field Day

1. They may be club owned equipment

2. Equipment loaned from members

2. Prep Radios for Field Day,

1. Test Operation of radios

2. All Accessory equipment

3. Prepare operating instructions

3. Set Up/Tear Down Radios and pack for storage

4. Return loaned equipment to owners

5. Antennas

1. Assist in the set up and tear down of antennas

2. Cable Runs

6. Facility

1. Layout

1. Tables and chairs

2. Layout power, antenna and computer cables

2. Procure and set up tables and chairs

3. Need visitor control flow- so they can see what we do but not get in the way or cause a safety problem

4. Generator & Fuel Placement

7. Food

1. Need a menu and cost budget for Saturday evening Dinner and Saturday AM Breakfast – Scott and Rusty

2. Transport Eric's refrigerator

3. Procure food and associated items

4. Snack, coffee, soft drinks for night crew

5. Cooks to assist with the above

8. Computers - Eric

1. Procure Computers

2. Install logging software in advance

3. Test all computers and network in advance

4. Remove logging Software

5. We may need more laptops

9. Training

1. Organize training classes

1. Field Day operations

2. Training with club purchased radios

2. Simple Operating instructions(Laminated) for each Operating position

3. Laminated Band Plans

10. Safety

1. Inspect facility for possible hazards

2. Antenna Safety for visitors

3. Placement of Warning placards near antennas and cables

4. Safety Training for members

11. Publicity - Andy

1. Field Day Signage

2. Announcements

1. Church program for that weekend

2. Church Web Site

3. Amateur Radio Material/ Handouts

4. Press Release

5. Schedule Media Visit?

6. Schedule Dignitary Visits

1. Elected Official

2. Served Agency

7. Arrange for Field Day Souvenir for dignitaries and Media

1. Coffee Mug/T-shirt/Cap

8. PARK golf shirt or name badge on Sunday

12. Photography

13. Logistics

1. Need drivers to pick up and deliver material

1. Before/After Field Day

2. Field Day Set Up/Tear Down

3. During Field Day

2. Maintain Generator fuel Supplies

3. Ice

4. Soft Drinks

Astrons are good. Keep in mind that switchers are _not _100% noise free.

367. Museum Ships Weekend

Yahoo group: laterisersgroup
Date: 2011-05-30 18:49:17 UTC
From: AE5NO Ron
Topic: 367 Message: 367

Attention Late Risers! That's right; stomach in chest out, heels together. Let me hear those eyeballs click!

OK all you history buffs, ex-military and assorted landlubbers. Next weekend is the 2011 Museum Ships weekend. Even if you never sailed on anything larger than an inner tube, this is your chance to sail into history in contact with some of the greatest vessels of all time. Four Aircraft Carriers, seven Battleships, 16 Submarines and other historical or unique ships, including the famous liner, Queen Mary are participating worldwide.

Along with other members of the Brazos Valley Amateur Radio Club, I will be on the air from Galveston, Texas operating aboard the submarine USS Cavalla and the destroyer escort, USS Stewart during this event. USS Cavalla was called "The Luckiest Ship in the Submarine Service." Her greatest sinking, during six war patrols, was the aircraft carrier Shokaku that had participated in the attack on Pearl Harbor. She was present in Tokyo Bay in September 1945 for the surrender signing aboard Missouri.

We will be QRV beginning Friday, June 3rd at 7 PM local time until Sunday abort 3 PM. Our call sign is KK5W. Look for us on SSB around 3810, 7260, 14260, 21360, 28360, plus or minus QRM. QSL to KK5W with a SASE. WE will have four stations operating; one each aboard the ships and two land stations next to the ships, so you have a good chance to make contact. The ships are located on Pelican Island, NA-143 for you IOTA chasers.

Contact any of our stations and you will get credit for both ships and the IOTA. Contact 15 museum ships next weekend and get a certificate from the Battleship New Jersey Amateur Radio Club. There are a total of 78 ships participating worldwide, so far. For more info
http://www.nj2bb.org/museum/

Other ships of the Texas Museum Ship Navy operating next weekend are the Battleship USS Texas, NA5DV in Houston and the Aircraft Carrier USS Lexington, W5LEX from Corpus Christi.

Do not fail to show up. This is a mandatory formation. :-)

See you at HamCom!

370. Hard Drive Recovery

Yahoo group: laterisersgroup
Date: 2011-06-07 14:12:34 UTC
From: RonL
Topic: 370 Message: 370

Late Risers! I need some help.

I worked the Museum Ships Event with the Brazos Valley Amateur Radio club last weekend. Had a great time and made a record number of contacts for the club.

One of the four computers we used to keep the logs failed on Sunday. As you can guess, it would be the one with the most contacts on it.

I took it to a local shop and they ran all the utilities on it but could get nothing usable off it. So now I will have to find someone who is skilled in data recovery at the next level. The data is good, the drive is just worn out and cannot read anything without errors.

I am told, the next level is to disassemble the hard drive, remove the platters and put them into another drive that can read the data. I am told, the price tag for this starts at $1200.

Does anyone know of a place where I can get this done for a kindness or as a donation to the club?

I am desperate at this point.

Ron, AE5NO

Here is an interesting article about your problem. I have used SpinRite on a number of occasions and it has succeeded where other steps and companies have failed. But it is not the only choice... Look at this article to see about SpinRite. It is an old standby.

Ron,

Can you also tell me if this was a desktop or laptop and what operating system it was running? Also what kind of hard drive is it and how big is it (model number would be great)

I do have some "tools" and may be able to help.

Thanks,

Greg

The only advise I can give here is the name of a recovery service that I had
to use once.
http://www.datarecovery.net/
The got all my data back, but it wasn't cheap. I don't remember how pricey
it was, but this was back in the early 90's anyway...

You might give them a call and see if they have special pricing for
non-profits or clubs.
Good luck!

Darren,

Do you have a list of items you may need?

I plan on bringing the same as last year:

3 box fans
~6 folding chairs
3 camping chairs
1 card table

And for the alternative energy credit:

4 15 watt (60 Watts) solar panel
1 battery

And of course Jonathan and I.

390. Field Day is Here - Tomorrow!!

Yahoo group: laterisersgroup
Date: 2011-06-25 01:17:28 UTC
From: Darren Mende - K5QB
Topic: 390 Message: 390

Hello to All,

It is that time again and we are all very excited to get out to the park tomorrow. We will begin setup at 8am at Russell Creek Park (see www.k5prk.net for details) and will get on the air at 1pm.

As I mentioned at the meeting and on the Good News net, please bring those items that are listed in the presentation as being needed. A quick list:

- Headphones
- Fans (box, table, large industrial, anything you got!)
- Folding Chairs
- Extension Cords
- Bug Spray
- Desk Lamps
- Canopies/Open Sided Tents
- Tarps

A group of club members will be at Poor Richards Cafe (Park and Ave K) for breakfast before setup begins. If you would like to join us, please feel free to show up. We will start to roll in there around 6:30am.

Any questions or comments???? Please post to the Yahoo! group so all can see.

Thanks and 73,

Darren
K5QB

397. 1776

Yahoo group: laterisersgroup
Date: 2011-06-30 19:30:11 UTC
From: Kipton Moravec
Topic: 397 Message: 397

Take a break from the heat and do something patriotic indoors. Come see the Musical 1776: Tale of the Continental Congress.

What is it about?

In the days leading up to July 4, 1776, Continental Congressmen John Adams and Benjamin Franklin coerce Thomas Jefferson into writing the declaration of Independence as a delaying tactic as they try to persuade the American colonies to support a resolution on independence. As George Washington sends depressing messages describing one military disaster after another, the businessmen, landowners and slave holders in Congress all stand in the way of the Declaration, and a single "nay" vote will forever end the question of independence. Large portions of spoken and sung dialog are taken directly from the letters and memoirs of the actual participants.

This is being produced at the Art Centre Theatre, 5220 Village Creek Dr., Plano, TX 75093 214-810-3ACT (3228). The theater is west of the intersection of Plano Parkway and Preston Rd. in Plano.

I will be playing the part of Cesar Rodney delegate from Delaware, and my wife, Delynda, will be playing the part of Abigail Adams. We do ot do very many shows together. And this is a good show for the whole family.

The Dates of the show are:

Friday, July 1 at 7:30 p.m.
Saturday, July 2 at 2:30 p.m. and 7:30 p.m
Sunday July 3 at 3:30 p.m.
Thursday July 7 at 7:30
Friday, July 8 at 7:30 p.m.
Saturday, July 9 at 2:30 p.m. and 7:30 p.m
Sunday July 10 at 3:30 p.m.

Click on the link to purchase tickets.

http://www.artcentretheatre.com/tickets/

Today, Thursday June 30, if you use the ticket code: 1776 you can purchase the tickets for $10. Otherwise they are $12 in advance and $15 at the door. When you order the tickets say you heard it from Kipton.

398. All the Field Day photos are uploaded!

Yahoo group: laterisersgroup
Date: 2011-07-01 01:18:50 UTC
From: ke5tjl
Topic: 398 Message: 398

All the Field Day photos have been posted to the laterisersgroup. I did a little editing to remove some photos. The same photos will be uploaded to the PARK website in a couple of day, according to Andy Knepler.

Ladies and Gents:

I would also like to echo Tony's sentiments. I had an absolute blast and am looking forward to the crazy antennae that will be there next year.

This Field Day would not have been possible without the effort of many people. In every aspect - from the food, radios, antennae, labor, and lack of sleep - everyone made this a great year. It was really a pleasure on my part because so many people did so much work and the groundwork was already laid by Ron last year (we miss you , buddy).

Give yourselves a pat on the back!!!

I too have some pictures from the event and will try to get them posted as soon as I have a chance to do some editing.

73 until Saturday morn...

Thanks to everyone for their support on Field Day. Personally, I had a great time at the event. Events like this are what make be proud to be a ham. We came together, established a rather elaborate communications node, had some fun and had great food. A really great way to spend 32 hours or so.

I look forward to doing it all again next year. I am already thinking about the new antennas we could have.

From: Greg Evans, K5GTX
Topic: 399 Message: 400

I just bought the Yagi design software. Now that I have all of the dipole I need, it will be interesting to start playing with ideas. But I talked to a guy in Louisiana last night that had created a dual layer rectangle antenna on his truck – basically the length and width of his truck. It sounded wonderful on 40m – no noise at all and it was only 75 watts. So I am a bit inspired by it..

I really and truly enjoyed my first field day. I have to say tho that the heat really affected my wife and I more than we expected, hence not staying nearly as long as I wanted nor helping with the tear down (I really wanted to help there too) but I did not want to exacerbate my health problem more…

Darren – you did a helluva job!

73,

Greg

426. Plano Balloon Fest Special Event Station

Yahoo group: laterisersgroup
Date: 2011-07-18 03:11:44 UTC
From: Darren Mende
Topic: 426 Message: 426

Good Evening All,

I know some of us have discussed a special event station for the Plano Balloon Fest and the time for planning has come. Kip called me this afternoon and he wanted to find out some of the details of our conversations and to also give some suggestions. Many of the ideas that we've had at breakfast, i.e, setting up at the church, getting a trailer, etc., are the same as Kip's. There are a couple of important things that have to happen pretty quick which shouldn't be too tough.

1. We need a person to spearhead the event. As much as I would love to be in control of everyone's lives, I have many other commitments that make it difficult for me to lead this endeavour.

2. We need a count of volunteers that are willing to help with this, specifically. Preferably in addition to those that are already working the fest.

3. A game plan for when the special event will run. Preferably between balloon launch times which will be between 10am to 6pm.

4. A design and estimated number of QSL cards for the event.

5. A cool 1X1 call

6. Inclusion of the event in QST, either in print or online.

There are a couple of fellas that are ready to tackle this project, so we really just need one person to be the leader. Between all of us, I doubt there will be any issue in manning the station. I plan to be part of this myself, so count me as one operator. I also made a point to Kip that there are "HF" minded folks that won't necessarily come to the balloon fest, but will come to a special event station. This may be a good opportunity to identify those folks and expand the scope of the event.

The floor is open for suggestions and we'll be talking about this at the club meeting as well.

73,

Darren

As much as I think a 1X1 call would be cool, I would like to publicize the Plano Amateur Radio Klub as well as the Plano Balloon Fest at the Special Event Station.

Lets give them a cooler QSL card with K5PRK and Plano Amateur Radio Klub on it.

Late Risers,

I may not be a member of PARK anymore but I consider myself a charter member of this group. With regards to Kip's recent post, I have some strong opinions.

The festival is not a recruiting opportunity but it is a showcase opportunity for amateur radio and the general public and a fun operating event. In fact, Kip has stated on more than one occasion that the Balloon Festival is not an official PARK event. HF operators look for these types of call sign because it is unusual. Therefore I think a 1x1 call is very appropriate for this event as it would create an attraction on the bands. If necessary, the club name could be printed on the QSL card. Kip may have his opinions, but the club should recognize that the balloon festival is in fact a club sponsored activity even though we use volunteers who are not club members.

In the past PARK has primarily been a VHF/UHF/ EMCOMM oriented group. However, in recent years, new members have come into the club whose interests lie elsewhere. Except for Field Day this would be the biggest HF event for PARK annually. An opportunity for a special event station would primarily be an HF activity that should be enthusiastically embraced by the club leadership to support those members who are HF oriented.

The time to publicize PARK was at HAMCOM. Not at the balloon festival. There were hundreds of potential members from the Plano Area including all those Scouts that Richard, KB5YBQ teaches every year. That would have been the premier opportunity to attract new members. So where was PARK? Oh yes, PARK had a booth at the rear of PLANO center. In other words PARK was practically invisible.

I was at HAMCOM and for the two days I was there I did not see a single member of the club leadership at the booth. The booth looked like an afterthought with no purpose, except to showcase HSMM, a very narrow niche of our hobby. With all due respects, ham radio is about a lot more than HSMM.

In the meantime McKinney had the talk in station on the air with their trailer parked right in front of the Plano Center! And they were using the PARK repeater to boot! How could that have happened??? Last year the club gained access to a portable comm. trailer, which to my knowledge has never been used in a public event, except for the 2010 Christmas parade. Humbug! We could have at least insisted the PARK banner be displayed on the trailer, since they were using our repeater. Fred Varian, is a member of the HAMCOM board is a PARK member and our repeater trustee. We had the connection but PARK leadership failed to act.

Just as bad IMHO, was the fact that the Dallas club was operating the W1AW/5 Station!!! Yee gads. PARK missed out on that opportunity too. Ask yourselves, if you were a HAM looking for a club to join, which of all the local clubs there, which one you would be most attracted too?

Late Risers,

I may not be a member of PARK anymore but I consider myself a charter member of this group. With regards to Kip's recent post, I have some strong opinions.

The festival is not a recruiting opportunity but it is a showcase opportunity for amateur radio and the general public and a fun operating event. In fact, Kip has stated on more than one occasion that the Balloon Festival is not an official PARK event. HF operators look for these types of call sign because it is unusual. Therefore I think a 1x1 call is very appropriate for this event as it would create an attraction on the bands. If necessary, the club name could be printed on the QSL card. Kip may have his opinions, but the club should recognize that the balloon festival is in fact a club sponsored activity even though we use volunteers who are not club members.

In the past PARK has primarily been a VHF/UHF/ EMCOMM oriented group. However, in recent years, new members have come into the club whose interests lie elsewhere. Except for Field Day this would be the biggest HF event for PARK annually. An opportunity for a special event station would primarily be an HF activity that should be enthusiastically embraced by the club leadership to support those members who are HF oriented.

The time to publicize PARK was at HAMCOM. Not at the balloon festival. There were hundreds of potential members from the Plano Area including all those Scouts that Richard, KB5YBQ teaches every year. That would have been the premier opportunity to attract new members. So where was PARK? Oh yes, PARK had a booth at the rear of PLANO center. In other words PARK was practically invisible.

I was at HAMCOM and for the two days I was there I did not see a single member of the club leadership at the booth. The booth looked like an afterthought with no purpose, except to showcase HSMM, a very narrow niche of our hobby. With all due respects, ham radio is about a lot more than HSMM.

In the meantime McKinney had the talk in station on the air with their trailer parked right in front of the Plano Center! And they were using the

PARK repeater to boot! How could that have happened??? Last year the club gained access to a portable comm. trailer, which to my knowledge has never been used in a public event, except for the 2010 Christmas parade. Humbug! We could have at least insisted the PARK banner be displayed on the trailer, since they were using our repeater. Fred Varian, is a member of the HAMCOM board is a PARK member and our repeater trustee. We had the connection but PARK leadership failed to act.

While I was agreeing with Ron, I did not take his comments as directed at Kip per se. Kip works his butt off and does a lot more things than I think any of us realize. He cannot and should not do everything and cannot be expected to do so. My agreement was the general intent that PARK missed a great opportunity to promote the club and personally, I was totally surprised at the nearly complete lack of visible presence of PARK. I know that Kip was working very hard to ensure everyone had internet connections in the hall, but we as club members, including myself, should have stepped up and ensured that there was a significant presence - both during talk in and at a booth. Kip was not the one at fault, we all were for different reasons! I did volunteer to assist the ARRL, but I could have and should have done more.

The short of my rambling is that the club leadership failed to take advantage of the situation and we as club members failed our leadership and the club by not putting forth more to help! So let's skip the blame game and agree that we all need to support our club better!

73s to all and I mean the above with all due respect to each of you.

Regarding HAMCOM,
From what I understood, PARK was never approached by ARRL for any of the sponsorships, talk-ins, etc. I could be wrong, but that's what I heard. We did man the table for a while until the HSMM guys showed up. The Mesquite club was supposed to share the table with us and split the manning, but they didn't show. We also didn't have the PR slot filled until last week. Having that role filled will help a lot for future events.
Regarding the PBF, a 1x1 call will draw in more people looking for the special event, and a QSL card is a great place for the K5PRK information. The 13 Colonies special event is a great example of this. The 1x1 call signs work well, and the certificate spells out the whos and whats. And if I'm on the radio for the event, you can bet I'll be mentioning K5PRK and K5PRK.net.
I think the post cards that Tony sent out last month drew in the most new people we've had in a long time. Maybe the next round of post cards can mention the special event and how it really adds a new dimension to ham radio. My first month, I got to see Field Day. A special event station would be every bit as cool as FD to a new guy.

73,
Damon

Subject: RE: [laterisersgroup] Re:
Plano Balloon Fest Special Event Station

Late Risers,

I may not be a member of PARK anymore but I consider myself a
charter member of this group. With regards to Kip's recent post, I

have some strong opinions.

The festival is not a recruiting opportunity but it is a showcase opportunity for amateur radio and the general public and a fun operating event. In fact, Kip has stated on more than one occasion that the Balloon Festival is not an official PARK event. HF operators look for these types of call sign because it is unusual. Therefore I think a 1x1 call is very appropriate for this event as it would create an attraction on the bands. If necessary, the club name could be printed on the QSL card. Kip may have his opinions, but the club should recognize that the balloon festival is in fact a club sponsored activity even though we use volunteers who are not club members.

In the past PARK has primarily been a VHF/UHF/ EMCOMM oriented group. However, in recent years, new members have come into the club whose interests lie elsewhere. Except for Field Day this would be the biggest HF event for PARK annually. An opportunity for a special event station would primarily be an HF activity that should be enthusiastically embraced by the club leadership to support those members who are HF oriented.

The time to publicize PARK was at HAMCOM. Not at the balloon festival. There were hundreds of potential members from the Plano Area including all those Scouts that Richard, KB5YBQ teaches every year. That would have been the premier opportunity to attract new members. So where was PARK? Oh yes, PARK had a booth at the rear of PLANO center. In other words PARK was practically invisible.

I was at HAMCOM and for the two days I was there I did not see a single member of the club leadership at the booth. The booth looked like an afterthought with no purpose, except to showcase HSMM, a very narrow niche of our hobby. With all due respects, ham radio is about a lot more than HSMM.

In the meantime McKinney had the
talk in station on the air with their trailer parked right in front of the Plano Center !
And they were using the PARK repeater to boot! How could that have happened??? Last year the club gained access to a portable comm. trailer, which to my knowledge has never been used in a public event, except for the 2010 Christmas parade. Humbug! We could have at least insisted the PARK banner be displayed on the trailer, since they were using our repeater. Fred Varian, is a member of the HAMCOM board is a PARK member and our repeater trustee. We had the connection but PARK leadership failed to act.

Just as bad IMHO, was the fact that the Dallas club was operating the W1AW/5 Station!!! Yee gads. PARK missed out on that opportunity too. Ask yourselves, if you were a HAM looking for a club to join, which of all the local clubs there, which one you would be most attracted too?

As much
as I think a 1X1 call would be cool, I would like to publicize
the Plano Amateur Radio Klub as well as the Plano Balloon Fest at the
Special Event Station.

Lets give them a cooler QSL card with K5PRK and Plano Amateur Radio Klub
on it.

Kip

I think the 1x1 would be better and adding PARK to the qso cards would work out well. Using a club web site is something I hear other special events doing. I think PARK has a great web site and we should take advantage of it. We can use a 1x1 and still have PARKs name everywhere we can put it. Good to hear from you Ron,I ran my first good news net(with the help of Scott AE5SG) last Thursday! Hope to help out with more events soon. KF5FEA,Rusty

From: K5GTX (Greg Evans)
Topic: 438 Message: 438

Ladies and Gentlemen,

I am working to put together this special event. I will be putting out details in the next few days, including the tasks that need to be completed. I think it will be a great event and an opportunity to promote Amateur Radio.. I am willing to bet that at least 90 % of the people that attend the PBF don't even know who provides the communications, much less how much involvement in the community we have.

The first I would like to ask for is of course people to man the HF station (s) as well as when. The Plano Balloon Festival is Sept 16th (4pm) - Sept 18th (7pm). I propose to have the station(s) on the air by 4pm on Friday and closed down / packed out by 6pm on Sunday.

The second is reasonable suggestions for the Station. I am sure that I will miss something as the inevitable result of age J.

I look forward to working with all of you to get this event up and going and making it a great experience and a positive reflection on our community!

Greg,

The club owns an Icom 718, power supply and the necessary attachments to run digital PSK or SSB. The question is, where are you going to locate it and how will you secure things at night?

At this moment, I have not confirmed any locations or equipment yet. I was planning to use the club radio as well as maybe one or two additional stations.... One for PSK, and one for ssb. But that is yet to be determined. It will depend on what we can get for trailer, location.

We are attempting to get space at the church. That is in the works at the moment.

We are also talking with McKinney about their trailer.

Again more details to come. I will also plan to have a meeting at 8am on Saturday to discuss progress.

441. Signing up for Plano Balloon Festival

Yahoo group: laterisersgroup
Date: 2011-07-26 19:22:17 UTC
From: Kipton Moravec
Topic: 441 Message: 441

In the next day or so there will be a link on the PARK website for any Amateur Radio Operators (not just PARK members) to volunteer for the Plano Balloon Festival (PBF).

The Amateur Radio operators have a different sign-up procedure from the rest of the PBF volunteers as we have very specialized duties and require more training and specialized equipment (our Amateur Radios) than a normal PBF volunteer.

So our sign-up will be on line shortly. DO NOT sign-up with the Plano Balloon Festival volunteers on their website unless you do not want to participate with the other Ham Radio operators doing Field or Recovery or the other tasks we are doing.

If you have any questions about this contact me at kip@... or Bruce n5byl1@... directly.

Kip

Hello Everyone,

I have not received any feed back from ARRL. I emailed the District Manager this morning. Hopefully I will hear something. If I don't hear anything in the morning, I'll email everyone in the NTX section and the appropriate division. I want to be sure we have things in place regarding the call sign before I start publicizing it.

Please start working on your QSL Card Submissions – I want to vote on them no later than the August 12th.

Just to bring everyone up to speed – the following is done:

1) Sites selected at the Church. I have emailed Larry where we would like to be and I hope to hear back from him by the end of the week.

2) We have use of the McKinney trailer and several people from McKinney (including its president) have volunteered to help

3) We have decided that we will have a Balloon Festival Listening / APRS Tracking Station out side to display our VHF Capabilities

4) We will have three or four antennas to work PSK, Phone, and CW. Frequencies to be decided and posted based on propagation each day.

5) We will need 5 people on site for traffic / logging during the event hours which I have proposed are:

Friday: 1600-2100 CDT
Saturday: 0700-2100 CDT
Sunday: 0700-1700 CDT

I have already arranged for a web page with PARK and I am working on that page now. But again, I will hold off posting until I know the callsign is approved.

6) Ron has a great contact list to send notices about the station to, so I will ask him to split that with Scott, if he doesn't mind, to get the notices sent out starting as soon as the website is ready.

7) I want to have a rolling log on the web site during the Special Events hours. Any suggestions?

Anything else I have missed or comments, please let me know.

73s,

Greg

Greg,

#2 and #3 are in areas we park cars. #1 is good, and it gets a lot of foot traffic. The church administrator does want to keep the driveway area open for pedestrians. I think if we setup in the area I marked with an X bellow (basically the same place as you had #1), he will be happy. The red lines are flags the church puts up for parking. The yellow line is a fence the PBF puts up to block off the right lane of Spring Creek to keep the pedestrians away from the busses and field ramp. The church has given the Gideons permission to hand out bibles in this area too, but that should not be an issue, as they don't take up much space. The church administrator also said I could give you some free parking passes for our lot. If it is just a few I can make them good for the whole festival. If you need more than just a few, we will need to make them good for 1 day or one "shift"/part of a day (a few could still be good for the whole festival). Let me know how you want to handle that. The bus drop off is right there too, so that is an option for people working the station. The flags will probably go up the Saturday before, so you can get a good idea of what it will look like the week before.

Randy,

Thank you so much. We surveyed the area on Saturday and have a few options. All are along the Spring Creek Parkway Side.

The picture attached shows the three areas we propose in the order of preference. Thank you for your support!

Please let me know where we can plan to set up and if you have any other questions or need any thing.

Best regards,

Greg Evans

Subject: Balloon Fest Special Event Station

Greg,

I got approval from our church administrator for the club to setup the special event station on the church grounds. His only concern was that we don't block pedestrian flow by getting too close to the corner. He didn't even have any issue with a few cars parking for free each sift. Let me know what the desired setup is soon and I will work with you and the church to confirm the exact setup location. Perhaps we could meet up there sometime to discuss the layout. BTW, there is no power in the high traffic area, so you will need a generator.

Ah yes, the time honored end to every ham QSO has been much maligned, corrupted and talked about down through the years of Ham History.

Don't get me wrong. I'm not a stickler for ham grammar or any other grammar. I'm from New York where English is merely a subject taught in school. Well, I am not so sure about that anymore, but pure English was never the lingua franca for everyday communication

Whether it's 73 or what ever, it's the feeling that counts. 73 started out as a CW shortcut way to end a QSO. Back at the beginning of the 20th century, people were a lot more graceful and courteous. 73 was a sincere expression of thanks for a good conversation. We are not that formal anymore and it seems that just plan old 73 is no longer enough.

Some have expanded on the time honored word, if you can call it that. 73 seems to have become a word but not yet a complete sentence. Now it is merely a connector like Best 73 to emphasize that we REALLY mean it. The last time someone was that sincere, I was checking to be sure I still had my wallet.

73 is OK but the plural form, 73's is confusing. Do you mean 73 73? Or 73 73 73 73 73 73 73 73 73 73 73 73 73 73 73? Just how many times is 73 repeated in 73's?

Maybe a better way to express the feeling is just to say 73(X) where X = the number of times your want to repeat Best Regards. That way people have a way to gauge your sincerity. If you say 73, that is mildly sincere. 73(10), that is really sincere. On the other hand if you repeat it too many times like 73(100), people will think you are making fun of them and they'll be insulted. The great comedian Don Rickles said, "There is a delicate balance between sincerity and ridicule." He should know.

As a former rocket scientist, I always try to improve the accuracy of things that I do. Lately, I've been experimenting with 73. For example, after only a mildly interesting QSO, instead of 73, I might just end it with "3". That would be polite but not over the top. After a not very interesting contact, I will say 36.5, with half hearted sincerity or after a really good one, 146. It just depends on how I feel.

So have fun with it and 73eeeeezzz

73eeeeezzz

Ah yes, the time honored end to every ham QSO has been much maligned, corrupted and talked about down through the years of Ham History.

Don't get me wrong. I'm not a stickler for ham grammar or any other grammar. I'm from New York where English is merely a subject taught in school. Well, I am not so sure about that anymore, but pure English was never the lingua franca for everyday communication

Whether it's 73 or what ever, it's the feeling that counts. 73 started out as a CW shortcut way to end a QSO. Back at the beginning of the 20th century, people were a lot more graceful and courteous. 73 was a sincere expression of thanks for a good conversation. We are not that formal anymore and it seems that just plan old 73 is no longer enough.

Some have expanded on the time honored word, if you can call it that. 73 seems to have become a word but not yet a complete sentence. Now it is merely a connector like Best 73 to emphasize that we REALLY mean it. The last time someone was that sincere, I was checking to be sure I still had my wallet.

73 is OK but the plural form, 73's is confusing. Do you mean 73 73? Or 73 73 73 73 <tel:73%2073%2073%2073%2073%2073%2073> 73 73 73 73 73 73 73 73 73 <tel:73%2073%2073%2073%2073%2073%2073> 73 73 73? Just how many times is 73 repeated in 73's?

Maybe a better way to express the feeling is just to say 73(X) where X = the number of times your want to repeat Best Regards. That way people have a way to gauge your sincerity. If you say 73, that is mildly sincere. 73(10), that is really sincere. On the other hand if you repeat it too many times like 73(100), people will think you are making fun of them and they'll be insulted. The great comedian Don Rickles said, "There is a delicate balance between sincerity and ridicule." He should know.

As a former rocket scientist, I always try to improve the accuracy of things that I do. Lately, I've been experimenting with 73. For example, after

only a mildly interesting QSO, instead of 73, I might just end it with "3". That would be polite but not over the top. After a not very interesting contact, I will say 36.5, with half hearted sincerity or after a really good one, 146. It just depends on how I feel.

So have fun with it and 73eeeeezzz

Rusty, Can you weld come large magnetic mounts on the walker. that way Ron can just stick it on top of the trunk. That way he doesn't have to move the antennas between the car and the walker.

Rusty, Can you weld come large magnetic mounts on the walker. that way Ron can just stick it on top of the trunk. That way he doesn't have to move the antennas between the car and the walker.

73eeeeezzz

Ah yes, the time honored end to every ham QSO has been much maligned, corrupted and talked about down through the years of Ham History.

Don't get me wrong. I'm not a stickler for ham grammar or any other grammar. I'm from New York where English is merely a subject taught in school. Well, I am not so sure about that anymore, but pure English was never the lingua franca for everyday communication

Whether it's 73 or what ever, it's the feeling that counts. 73 started out as a CW shortcut way to end a QSO. Back at the beginning of the 20th century, people were a lot more graceful and courteous. 73 was a sincere expression of thanks for a good conversation. We are not that formal anymore and it seems that just plan old 73 is no longer enough.

Some have expanded on the time honored word, if you can call it that. 73 seems to have become a word but not yet a complete sentence. Now it is merely a connector like Best 73 to ! emphasize that we REALLY mean it. The last time someone was that sincere, I was checking to be sure I still had my wallet.

73 is OK but the plural form, 73's is confusing. Do you mean 73 73? Or 73 73 73 73 73 73 73 <tel:73%2073%2073%2073%2073%2073%2073> 73 73 73 73 73 73 73 <tel:73%2073%2073%2073%2073%2073%2073> 73 73? Just how many times is 73 repeated in 73's?

Maybe a better way to express the feeling is just to say 73(X) where X = the number of times your want to repeat Best Regards. That way people have a way to gauge your sincerity. If you say 73, that is mildly sincere. 73(10), that is really sincere. On the other hand if you repeat it too many times like 73(100), people will think you are making fun of them and they'll be insulted. The great comedian Don Rickles said, "There is a delicate balance between sincerity and ridicule." He should know.

As a former rocket scientist, I always try to improve the accuracy of things that I do. Lately, I've been experimenting with 73. For example, after only a mildly interesting QSO, instead of 73, I might just end it with "3". That would be polite but not over the top. After a not very interesting contact, I will say 36.5, with half hearted sincerity or after a really good one, 146. It just depends on how I feel.

So have fun with it and 73eeeeezzz

Cool! Glad you guys were able to work them. The op at 7pm was Dave, so it was probably the same guy. He seemed to want to chit chat a bit with most everyone.
I didn't actually work him as I don't have a good 40M antenna currently up, but I knew you (and others) were set on 40 so I thought I'd put the word out.
Once I put the big wire antenna back up tomorrow evening, I'm sure I won't have any problems making that third contact. :-)

515. Antenna Layouts for K5B

Yahoo group: laterisersgroup
Date: 2011-08-26 18:45:28 UTC
From: Greg Evans
Topic: 515 Message: 515
Attachments: 1 described; binary payloads are missing from this source WARC

Gentlemen,

Lets Collaborate on Antennas. I need ideas on how to layout the antennas for optimum performance. And of course, we need a band plan. 20m seems to be active this week, so maybe we can use 20m for phone (voice), and PSK31. But I know little about CW and where we should be on that. As for radios, I will bring my IC-7000 and am open to the other 3. I believe the PARK and MARC clubs each have a radio. So that leaves us with needing an APRS/VHF station. Any options on that are gladly accepted.

So here is what we need to decide:

1) Radios/Tuners
2) Modes/Bands
3) Antennas based on the equipment/modes/bands.

So that you remember, we have chosen the area below to put the CSU.

So, lets build this thing!!!

73
Greg

Just a bit of clarification – The CSU is the trailer. The White X is where we get to setup the trailer. The antennas could be anywhere outside of the red lines as the area inside the red lines will be used for parking.

Subject: [laterisersgroup] Antenna Layouts for K5B

Gentlemen,

Lets Collaborate on Antennas. I need ideas on how to layout the antennas for optimum performance. And of course, we need a band plan. 20m seems to be active this week, so maybe we can use 20m for phone (voice), and PSK31. But I know little about CW and where we should be on that. As for radios, I will bring my IC-7000 and am open to the other 3. I believe the PARK and MARC clubs each have a radio. So that leaves us with needing an APRS/VHF station. Any options on that are gladly accepted.

So here is what we need to decide:

1) Radios/Tuners

2) Modes/Bands

3) Antennas based on the equipment/modes/bands.

So that you remember, we have chosen the area below to put the CSU.

K5B Location

So, lets build this thing!!!

73

Greg

Just a bit of clarification – The CSU is the trailer. The White X is where we get to setup the trailer. The antennas could be anywhere outside of the red lines as the area inside the red lines will be used for parking.

Cool! Glad you guys were able to work them. The op at 7pm was Dave, so it was probably the same guy. He seemed to want to chit chat a bit with most everyone. I didn't actually work him as I don't have a good 40M antenna currently up, but I knew you (and others) were set on 40 so I thought I'd put the word out.

Once I put the big wire antenna back up tomorrow evening, I'm sure I won't have any problems making that third contact. :-)

Late Risers!

The ARRL just published my story about taking the General Class exam on the ARRL web site.

Here is the link to the story http://www.arrl.org/lurching-toward-general . I hope you enjoy reading it. I had a lot of fun writing about and remembering the experience.

543. Safety Vest

Yahoo group: laterisersgroup
Date: 2011-09-06 19:40:24 UTC
From: Michael Payne
Topic: 543 Message: 543

Fellow Hams,

I went to Northern Tool and Equipment on Spring Creek and 75 hwy and found a great lime green safety vest for $25 (not including tax) and it appears to be a real good one.
The vest has the following:

* Zip front closure made of solid fabric
* Mic strap
* Pocket for cell phone/radio
* 4 pockets for pen/tools
* 1 rear clipboard pocket
* 2 lower exterior pockets with snap closures
* 2 interior pockets with Velcro closure
* 2in. silver reflective vertical stripes over shoulder
* 2in. silver reflective horizontal strip around body

It was suggested to me to buy a XXL instead of the XL that I thought I'd wear. The vests run a little smaller that normal,apparently. I was told other places like Lowes and Home Depot have them, but I did not go and look at them. I did check online after my purchase and Lowes had some with a one fit all size, as did several at Home Depot. I think that this vest is a good value and should be sturdy enough for many years of use.
Hope this info helps!

548. Special Events Station

Yahoo group: laterisersgroup
Date: 2011-09-14 17:42:20 UTC
From: Greg Evans
Topic: 548 Message: 548

Hello everyone. As a reminder, we have a special events station during the Plano Balloon Festival (K5B). We still need operators and help! Local Amateur Radio Operators have been volunteering for the Plano Balloon Festival for the past 30 years! Now we are going to crow about It by setting up the first annual special events station at the Plano Balloon Festival. We will be located on the north corner of the First United Methodist Church grounds (at the corner of East Spring Creek Parkway and Fieldlark Drive - 3160 E. Spring Creek Pkwy) - located directly across from the Balloon Launch Area. You can either park at the Church or park at the Garden Ridge Parking lot and call in on simplex frequency 144.250 or the Richardson Repeater (147.12) for a pickup to the station. We have air conditioning, radios and antennas – we need your experience and enthusiasm for the hobby! We need CW, PSK31, Voice operators and loggers/helpers for the 20 m and 40 m bands. The hours will be:
1500 - 2300 (3pm -11pm) on Friday, September 16th
0600 - 2300 (6am -11pm) on Saturday, September 17th
0600 - 1600 (6am-4pm) on Sunday, September 18th

Please go to this Google Doc Signup Form (http://tinyurl.com/45yennt) Be sure to include your call sign and email (if not on arrl.net) so that we can contact you with details. Additionally, if you are interested in operating from your home for the special events station and are located within the general area of the Balloon Festival, please contact me directly at K5GTX@.... Our band plan is as follows:40m: 7.255 Voice
40m: 7.095 CW
40m: 7.070 PSK31
20m: 14.255 Voice
20m: 14.070 PSK31
15m: 21.355 Voice
15m: 21.095 CW We will only MONITOR 147.180 - this repeater will be in use during the Plano Balloon Festival. Do NOT Use this requency in any capacity unless it is in direct support of the Plano Balloon Festival. QSL Cards will be available via eQSL.cc and direct if a SASE is sent in by October 15th. The mailing address for the cards will be posted on the K5B-PBF.net website on Friday!Also, if you want to see what frequencies we are on, please visit the K5B-PBF.net site on starting Friday! We look forwarding to hearing you and working with you!!! 73

+ Public Service: Missouri Hams Help Out When 911 Service Goes Down

<http://www3.arrl.org/nl/al/image/ARES_911.jpg>

It doesn't take a major disaster for Amateur Radio to step in and save the day. Around 9 PM on September 5, a cable cut completely isolated the Johnson County 911 Center in Warrensburg, Missouri, impacting landline, Internet and cellular service. Johnson County -- home to Whiteman Air Force Base -- is located just east of the Kansas City metro area.

Johnson County's emergency plan called for the telephone company to transfer all 911 calls to the Henry County 911 facility in Clinton, Missouri; Henry County is the next county south of Johnson County. But an equipment problem at Henry County's center prevented the transfer from completing successfully. Calls were then routed to the Benton County 911 Center in Warsaw, Missouri; Benton County is the next county west of Henry County. This transfer was successful and calls started coming in to Warsaw. Unfortunately, Warsaw is more than 40 miles from Warrensburg, and the two centers were unable to establish communication using the county VHF radio facilities. It was then that radio amateurs were brought in to provide communications support. Read more here <http://www.arrl.org/news/missouri-hams-help-out-when-911-service-goes-down> .

+ ARRL to Welcome USTTI Students Next Month

<http://www3.arrl.org/nl/al/image/usttilogo.jpg>

Next month -- October 3-7 -- the ARRL will welcome international students who want to learn how to administer and regulate Amateur Radio programs in their home countries. This course, offered by the United States Telecommunications Training Institute (USTTI) for learners from developing countries, will help the participants create, administer and foster an Amateur Radio Service in their countries. This is the 27th year that the ARRL has participated in the USTTI program. Read more here <http://www.arrl.org/news/arrl-to-welcome-ustti-students-next-month> .

+ ARRL Seeks Treasurer

<http://www3.arrl.org/nl/al/image/Photo%20C%20-%20K1LU.jpg>

Jim NcCobb, K1LU, is stepping down after 31 years as ARRL Treasurer.

After more than 31 years of distinguished service to the ARRL as its volunteer Treasurer, Jim McCobb, K1LU, has decided to step down when his current term expires in January 2012. The ARRL is seeking qualified candidates from among its membership. The Board of Directors elects the Treasurer and other officers at its Annual Meeting in even-numbered years.

The Treasurer is a non-voting member of the Board of Directors and must be a licensed radio amateur and a Full member of the ARRL for four continuous years prior to nomination. The ARRL By-laws <http://www.arrl.org/arrl-by-laws> define the role of the Treasurer as follows:

* In consultation with and subject to the general supervision of the Administration and Finance Committee, provides for the investment and reinvestment of the surplus funds of the League in any bonds or stocks or other securities as would be selected by a trustee with the care of a prudent investor.
* Reports to and attends all regular meetings of the Board of Directors.
* Serves as a member of the Administration and Finance Committee.

The position is unpaid; however, necessary expenses including travel to meetings are reimbursable.

A Search Committee has been established to recommend one or more candidates for Treasurer to the Board. Additional information about the position is available here <http://www.arrl.org/files/media/News/ARRL_Treasurer-Position_Description.pdf> . Interested and qualified members are invited to submit a Statement of Interest and qualifications by November 14, 2011 to the Secretary, preferably by e-mail <mailto:dsumner@...> .

+ ARRL Facebook Page: 20,000 Fans Strong

<http://www3.arrl.org/nl/al/image/facebook_logo.jpg>

With more than 20,000 fans on Facebook, the ARRL Facebook page is the number one spot for hams on the Internet's most popular social networking site. Not only is the ARRL page the most popular Amateur Radio page on Facebook, it is attracting many young -- and not-so-young -- hams to share their opinions and ham radio-related news with other hams. According to Facebook demographics, more than 460 people between the ages of 13-17 are fans of the ARRL's page, with 74 percent of users below the age of 55. Since September 2010, hundreds of users post their own comments on the page, make a comment on a post or "like" a comment each week. The ARRL has been active on Facebook since July 2010; since that time, the page has been viewed almost 14.5 million times by fans and non-fans alike. The ARRL also has a Logbook of the World Facebook page. Premiering in June 2011, this popular page has almost 1000 ham fans. Read more here <http://www.arrl.org/news/arrl-facebook-page-20-000-fans-strong> .

+ Heathkit's Amateur Radio Plans Taking Shape

<http://www3.arrl.org/nl/al/image/HeathkitES.jpg>

Heathkit Educational Systems hopes to reenter the Amateur Radio market by the end of 2011. Back in August, Heathkit announced <http://www.arrl.org/news/heathkit-returns-to-the-kit-business> its return

to the kit business and actively solicited suggestions. The response from Amateur Radio operators convinced Heathkit to develop several Amateur Radio products.

"When we made the announcement on our web page about a month ago, we had no intention of entering the Amateur Radio kit market," Ernie Wake, Heathkit's Director of Sales and Marketing, told the ARRL. "The response was really overwhelming, exciting and scary. The scary part is that the brand name has so much loyalty that we don't want to disappoint the people who have such fond memories."

Wake said that Heathkit is presently working on developing a few Amateur Radio kits. "Initially, the kit line will include a few 'accessories,' like kits for a Dual Watt Meter, Antenna Tuners and the Cantenna," he explained. "Once we are a little more 'settled,' I think we will develop a QRP receiver. We won't rush to market just to get there. We want to develop a line of kits in the tradition of Heathkit. I'm hoping to have one or two kits by the end-of-the-year."

QEX -- the September/October 2011 Issue

<http://www3.arrl.org/nl/al/image/QEX_SeptOct2011_cover.jpg>

The September/October issue of QEX <http://www.arrl.org/qex> is already out, and it is full of theoretical and practical technical articles that you won't want to miss. QEX is the ARRL's "Forum for Communications Experimenters." Published bimonthly, it features technical articles, columns and other items of interest to radio amateurs and communications professionals. The mission of QEX is threefold: To provide a medium for the exchange of ideas and information among Amateur Radio experimenters; to document advanced technical work in the Amateur Radio field, and to support efforts to advance the state of the Amateur Radio art. Read more here <http://www.arrl.org/news/em-qex-em-the-september-october-2011-issue> .

Solar Update

<http://www3.arrl.org/nl/al/image/latest091511.jpg>

The Sun, as seen on Thursday, September 15, 2011 from NASA's SOHO Extreme Ultraviolet Imaging Telescope <http://sohowww.nascom.nasa.gov/data/realtime/realtime-update.html> . This MDI <http://soi.stanford.edu/> (Michelson Doppler Imager) image was taken in the continuum near the Ni I 6768 Angstrom line. The most prominent features are the sunspots. This is very much how the Sun looks in the visible range of the spectrum.

Tad "When the Sun is setting <http://www.youtube.com/watch?v=znOOaKPTH2Y> " Cook, K7RA, reports: Although the average daily sunspot numbers are lower -- down nearly 13 points to 91.7 -- the average daily solar flux is higher by 6.7 points, rising to 122.2. Yes, solar activity is rising rapidly. You could see it coming earlier this week by glancing at the STEREO mission

<http://stereo.gsfc.nasa.gov/> when you looked at the back side of the Sun. There was lots of activity, and you can still see quite a bit more (those white patches) just over the eastern horizon, which is on the left side of the image beyond -90 degrees. The image of the daily Sun <http://spaceweather.com/> shows a disc peppered with sunspots, a welcome sight after watching the current solar cycle seem to stall. Numerous CME events disturbed the Earth's magnetic field. The planetary A index record shows September 9, 10 and 12 were the most active days, with the index at 36, 33 and 27. The autumnal equinox in the northern hemisphere is just a week away: September 23 at 0905 UTC, which is 5:05 AM EDT or 02:05 AM PDT. Luckily, the increased sunspot activity should continue. The predicted solar flux is 145 on September 15-17, 150 September 18-22, 110 on September 23-24, and 115 on September 25-29. The predicted planetary A index is 5 on September 15-18, 7 on September 19, 5 on September 20-23, 7 on September 24-25, 5 on September 26-29, and 15 on September 30. Look for more information on the ARRL website on Friday, September 16. For more information concerning radio propagation, visit the ARRL Technical <http://www.arrl.org/propagation-of-rf-signals> Information Service Propagation page. This week's "Tad Cookism" is brought to you by The Go-Go's Beneath the Blue Sky <http://www.youtube.com/watch?v=znOOaKPTH2Y> .

+ New QuickStats Poll Now Available on ARRL Website

Four new poll questions have just been published on the QuickStats <http://www.arrl.org/quickstats> page on the ARRL website. Let your voice be heard!

Questions in this month's QuickStats poll:

* What is the longest time you've ever spent at your radio (including brief breaks)?
* Do you analyze your antenna designs with modeling software before you build the antennas?
* Have you monitored signals from the new ARISSat-1 satellite?
* How far are you willing to drive for a hamfest?

Visit the QuickStats page <http://www.arrl.org/quickstats> and be sure to bookmark it in your browser. Results from this QuickStats poll will be published in the December 2011 issue of QST on the QuickStats page, located in the rear advertising section of the magazine. Along with monthly poll results, QST QuickStats offers colorful charts and graphs that highlight interesting Amateur Radio statistics.

This Week on the Radio

This week:

* September 16 -- NCCC Sprint Ladder; AGB NEMIGA Contest
* September 17 -- Connecticut QSO Party; Feld Hell Sprint
* September 17-18 -- ARRL <http://www.arrl.org/news/go-high-for-the-2011-arrl-10-ghz-and-up-contest> 10 GHz and Up Contest (local time); South Carolina QSO Party; Washington

State Salmon Run; CIS DX QPSK63 Contest; Scandinavian Activity Contest (CW); SRT HF Contest (SSB); QRP Afield
* September 18 -- North American Sprint (SSB); WAB 144 MHz QRP Phone Contest; BARTG Sprint 75
* September 19 -- Run for the Bacon QRP Contest; 144 MHz Fall Sprint (local time)
* September 22 -- NAQCC Straight Key/Bug Sprint

Next week:

* September 23 -- NCCC Sprint Ladder
* September 24 -- AGCW VHF/UHF Contest
* September 24-25 -- ARRL EME Contest <http://www.arrl.org/eme-contest> ; Texas QSO Party; CQ Worldwide DX Contest (RTTY)
* September 25 -- UBA ON 6 Meter Contest
* September 26 -- QRP Homebrewer Sprint
* September 27 -- 222 MHz Fall Sprint (local time)
* September 28 -- SKCC Sprint
* September 28-29 -- CWops Mini-CWT Test

All dates, unless otherwise stated, are UTC. + Public Service: Missouri Hams Help
Out When 911 Service Goes Down

It doesn't take a major disaster for
Amateur Radio to step in and save
the day. Around 9 PM on September 5,
a cable cut completely isolated the
Johnson County 911 Center in
Warrensburg, Missouri, impacting
landline, Internet and cellular
service. Johnson County -- home to
Whiteman Air Force Base -- is
located just east of the Kansas City
metro area.

Johnson County's emergency plan
called for the telephone company to
transfer all 911 calls to the Henry

County 911 facility in Clinton, Missouri; Henry County is the next county south of Johnson County. But an equipment problem at Henry County's center prevented the transfer from completing successfully. Calls were then routed to the Benton County 911 Center in Warsaw, Missouri; Benton County is the next county west of Henry County. This transfer was successful and calls started coming in to Warsaw. Unfortunately, Warsaw is more than 40 miles from Warrensburg, and the two centers were unable to establish communication using the county VHF radio facilities. It was then that radio amateurs were brought in to provide communications support. Read more here.

+ ARRL to Welcome USTTI Students Next Month

Next month -- October 3-7 -- the ARRL will welcome international students who want to learn how to administer and regulate Amateur Radio programs in their home countries. This course, offered by the United States Telecommunications Training Institute (USTTI) for learners from developing countries, will help the participants create, administer and foster an Amateur Radio Service in their countries. This is the 27th year that the ARRL has participated in the USTTI program. Read more here.

+ ARRL Seeks Treasurer

Jim NcCobb, K1LU, is stepping down after 31 years as ARRL Treasurer.

After more than 31 years of distinguished service to the ARRL as its volunteer Treasurer, Jim McCobb, K1LU, has decided to step down when his current term expires in January

2012. The ARRL is seeking qualified candidates from among its membership. The Board of Directors elects the Treasurer and other officers at its Annual Meeting in even-numbered years.

The Treasurer is a non-voting member of the Board of Directors and must be a licensed radio amateur and a Full member of the ARRL for four continuous years prior to nomination. The ARRL By-laws define the role of the Treasurer as follows:

* In consultation with and subject to the general supervision of the Administration and Finance Committee, provides for the investment and reinvestment of the surplus funds of the League in any bonds or stocks or other securities as would be selected by a trustee with the care of a prudent investor.
* Reports to and attends all regular meetings of the Board of Directors.
* Serves as a member of the Administration and Finance Committee.

The position is unpaid; however, necessary expenses including travel to meetings are reimbursable.

A Search Committee has been established to recommend one or more candidates for Treasurer to the Board. Additional information about the position is available here. Interested and qualified members are invited to submit a Statement of Interest and qualifications by November 14, 2011 to the Secretary, preferably by e-mail.

+ ARRL Facebook Page: 20,000 Fans Strong

With more than 20,000 fans on Facebook, the ARRL Facebook page is the number one spot for hams on the Internet's most popular social networking site. Not only is the ARRL page the most popular Amateur Radio page on Facebook, it is attracting many young -- and not-so-young -- hams to share their opinions and ham radio-related news with other hams. According to Facebook demographics, more than 460 people between the ages of 13-17 are fans of the ARRL's page, with 74 percent of users below the age of 55. Since September 2010, hundreds of users post their own comments on the page, make a comment on a post or "like" a comment each week. The ARRL has been active on Facebook since July 2010; since that time, the page has been viewed almost 14.5 million times by fans and non-fans alike. The ARRL also has a Logbook of the World Facebook page. Premiering in June 2011, this popular page has almost 1000 ham fans. Read more here.

+ Heathkit's Amateur Radio Plans Taking Shape

Heathkit Educational Systems hopes to reenter the Amateur Radio market by the end of 2011. Back in August, Heathkit announced its return to the kit business and actively solicited suggestions. The response from Amateur Radio operators convinced Heathkit to develop several Amateur Radio products.

"When we made the announcement on our web page about a month ago, we had no intention of entering the Amateur Radio kit market," Ernie Wake, Heathkit's Director of Sales

and Marketing, told the ARRL. "The response was really overwhelming, exciting and scary. The scary part is that the brand name has so much loyalty that we don't want to disappoint the people who have such fond memories."

Wake said that Heathkit is presently working on developing a few Amateur Radio kits. "Initially, the kit line will include a few 'accessories,' like kits for a Dual Watt Meter, Antenna Tuners and the Cantenna," he explained. "Once we are a little more 'settled,' I think we will develop a QRP receiver. We won't rush to market just to get there. We want to develop a line of kits in the tradition of Heathkit. I'm hoping to have one or two kits by the end-of-the-year."

QEX -- the September/October 2011 Issue

The September/October issue of QEX is already out, and it is full of theoretical and practical technical articles that you won't want to miss. QEX is the ARRL's "Forum for Communications Experimenters." Published bimonthly, it features technical articles, columns and other items of interest to radio amateurs and communications professionals. The mission of QEX is threefold: To provide a medium for the exchange of ideas and information among Amateur Radio experimenters; to document advanced technical work in the Amateur Radio field, and to support efforts to advance the state of the Amateur Radio art. Read more here.

Solar Update

The Sun, as seen on Thursday, September 15, 2011 from NASA's SOHO

Extreme Ultraviolet Imaging Telescope. This MDI (Michelson Doppler Imager) image was taken in the continuum near the Ni I 6768 Angstrom line. The most prominent features are the sunspots. This is very much how the Sun looks in the visible range of the spectrum.

Tad "When the Sun is setting" Cook, K7RA, reports: Although the average daily sunspot numbers are lower -- down nearly 13 points to 91.7 -- the average daily solar flux is higher by 6.7 points, rising to 122.2. Yes, solar activity is rising rapidly. You could see it coming earlier this week by glancing at the STEREO mission when you looked at the back side of the Sun. There was lots of activity, and you can still see quite a bit more (those white patches) just over the eastern horizon, which is on the left side of the image beyond -90 degrees. The image of the daily Sun shows a disc peppered with sunspots, a welcome sight after watching the current solar cycle seem to stall. Numerous CME events disturbed the Earth's magnetic field. The planetary A index record shows September 9, 10 and 12 were the most active days, with the index at 36, 33 and 27. The autumnal equinox in the northern hemisphere is just a week away: September 23 at 0905 UTC, which is 5:05 AM EDT or 02:05 AM PDT. Luckily, the increased sunspot activity should continue. The predicted solar flux is 145 on September 15-17, 150 September 18-22, 110 on September 23-24, and 115 on September 25-29. The predicted planetary A index is 5 on September 15-18, 7 on September 19, 5 on September 20-23, 7 on September 24-25, 5 on September 26-29, and 15 on September 30. Look for more information on the ARRL website on

Friday, September 16. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page. This week's "Tad Cookism" is brought to you by The Go-Go's Beneath the Blue Sky.

+ New QuickStats Poll Now Available on ARRL Website

Four new poll questions have just been published on the QuickStats page on the ARRL website. Let your voice be heard!

Questions in this month's QuickStats poll:

* What is the longest time you've ever spent at your radio (including brief breaks)?
* Do you analyze your antenna designs with modeling software before you build the antennas?
* Have you monitored signals from the new ARISSat-1 satellite?
* How far are you willing to drive for a hamfest?

Visit the QuickStats page and be sure to bookmark it in your browser. Results from this QuickStats poll will be published in the December 2011 issue of QST on the QuickStats page, located in the rear advertising section of the magazine. Along with monthly poll results, QST QuickStats offers colorful charts and graphs that highlight interesting Amateur Radio statistics.

This Week on the Radio

This week:

* September 16 -- NCCC Sprint Ladder; AGB NEMIGA Contest

* September 17 -- Connecticut QSO Party; Feld Hell Sprint
* September 17-18 -- ARRL 10 GHz and Up Contest (local time); South Carolina QSO Party; Washington State Salmon Run; CIS DX QPSK63 Contest; Scandinavian Activity Contest (CW); SRT HF Contest (SSB); QRP Afield
* September 18 -- North American Sprint (SSB); WAB 144 MHz QRP Phone Contest; BARTG Sprint 75
* September 19 -- Run for the Bacon QRP Contest; 144 MHz Fall Sprint (local time)
* September 22 -- NAQCC Straight Key/Bug Sprint

Next week:

* September 23 -- NCCC Sprint Ladder
* September 24 -- AGCW VHF/UHF Contest
* September 24-25 -- ARRL EME Contest; Texas QSO Party; CQ Worldwide DX Contest (RTTY)
* September 25 -- UBA ON 6 Meter Contest
* September 26 -- QRP Homebrewer Sprint
* September 27 -- 222 MHz Fall Sprint (local time)
* September 28 -- SKCC Sprint
* September 28-29 -- CWops Mini-CWT Test

All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page, the ARRL Contest Update and the WA7BNM Contest Calendar for more information. Looking for a Special Event station? Be sure to check out the ARRL Special Event Stations Web page.

Upcoming ARRL Section, State and Division Conventions and Events

* September 17 -- ARRL Roanoke Division Convention, Virginia Beach, Virginia
* September 24 -- ARRL Washington State Convention, Spokane Valley, Washington
* October 8-9 -- ARRL Florida State Convention, Melbourne, Florida
* October 9 -- ARRL Connecticut State Convention, Wallingford, Connecticut
* October 14-16 -- ARRL Pacific Division Convention, Santa Clara, California
* October 21-22 -- ARRL West Gulf Division Convention, Ardmore, Oklahoma
* October 22 -- ARRL Iowa State Convention, Sergeant Bluff, Iowa
* November 6 -- ARRL Iowa Section Convention, Davenport, Iowa
* November 19-20 -- ARRL Indiana State Convention, Fort Wayne, Indiana
* December 3-4 -- ARRL West Central Florida Section Convention, Palmetto, Florida

Michael,

I was wrapping up K5B activity and had a good pileup going on 20M when
this weather made me pull the plug.

Clint,

Those were great pictures your son took! You should have Eric, KE5VBO, put them up on the website or where ever they are putting the rest of the pictures.
I looked at several other photos and your son has a good eye for composition.

73,
Michael KE5TJL

Late Risers,

You are all invited to the Houston Hamfest on March 3, 2012. Click the link to get more info.

http://www.houstonhamfest.org/index.php

I am sending this out early so no one will have the sorry excuse about a conflicting schedule. It is a one day event that starts at 8 AM. You want to come down on Friday night, eat BBQ or whatever and get to the event early Saturday. Or you can team-drive down on Saturday.

There are plenty of cheap motels around or you can crash at my place if you are not shy.

73,

Ron, AE5NO

Dang, those are some seriously dedicated folks! Braving a near hurricane to get to a barren rock they still have to scale after they arrive.
Don't expect to hear them, but with recent propagation, you never know.
Personally, PJ2T is more along my idea of a DXpedition. :-)

Those of you who can work split should keep an ear out for this
DXpedition on Christmas Island in the South Pacific.
It's a fairly rare DX entity. While they have had some big pileups
during the day, by 8:30-9:00 pm local time or so, they seem to have
only steady but limited traffic. Tonight they had excellent signals
(and good ears) around that time on 10, 12 and 17 meters.
I've so far managed to work them on all 3 bands on SSB with 100 watts
and a wire antenna. They will be there for another 3 weeks
so interest should also diminish over time, as all the big guns will
work them and move on. If nothing else, it's great practice in learning
how to work split mode. Give a listen and snag some rare DX. Good luck!

Thanks, Stan. I have the capability according to my manual, but have never used it before on my radio. My question is, does the operator working split ever announce that fact, are are you supposed to know or figure it out? Is there a set amount of frequency that you move up or down to hear the split, or is it just to figure out? These are probably simple questions, ,but I would appreciate your (or anybody else) knowledge to help me gain more knowledge and enjoy this sport more!

Michael,

You can go to their website, http://www.t32c.com/Frequencies

That will tell you what bands and frequencies they are using to transmit and listen.

You can check the DX clusters on the internet to see their most recent activity, what bands they are currently on and what times they are active. Depending on propagation, you probably won't hear them all the time, although you never know. I plan to follow Stan's advice and try in the evening.

Michael,

Those are excellent questions and it solely depends on the operator. There is no standard. He determines the split. If it's a good op. after almost every contact he will say something like "Tango 32 Charlie listening 10-15 up". That means that you need to leave your receive frequency on him, but set your transmit somewhere between 10-15 KHz higher. I try to listen up there to see what's busy before picking a spot to try. When they are working split over a range like that it may take them a few tries to find you, so be patient and don't give up. One of the advantages of the evening times is that they sometimes make this very simple. When I worked them on 12M they were just listening 10 up, so I knew exactly where to transmit and it was quiet enough that I got them on my first call. :-) They do have a couple of less helpful ops that I've heard that will just keep saying "QRZ" after each contact and you don't immediately know who they are or what the split is. They do eventually get around to identifying and they will mention the split but you have to listen a bit. You can also check DX Summit (or other spotting sites) to see what others have spotted to get an idea. As for frequencies, as Ron mentioned, they do list many of them on their website. From personal experience, on 10M they seem to like the 28.480-28.500 range (and they are sometimes sharing that with 3D2R in Fiji, which you also might want to give a try if you hear them. They also work split). On 12M, check around 24.940, and on 17M check around 18.150. The past couple of nights, they have been about the only signal left on 10 & 12 once it's been dark for a while. Hopefully the good propagation will continue and everyone will have a chance to get them in the log. If you have any further questions, post them to the group or email me direct and I'll be glad to try and help. Good luck!

Yes, that usually works. Keep your tuner handy, because 12M has been smokin' hot
at times the past few weeks with big openings to Europe, the South Pacific, and Japan.
Even heard a station on the island of Mauritius out in the Indian Ocean (10.6K miles) and he was S8-9!

Michael,

They are still on 24.950 though not as strong as before. They are now listening 3 up and have an op who doesn't ID often and instead just says "QRZ".
If you aren't able to hear them right now, don't give up. Conditions are likely to improve in an hour or so.

For anyone still looking, T32C is still nice and strong on both 28.485
and 24.940.
3D2R is weak right now on 18.150, but conditions might improve a little
later.

Michael,
Glad to help!

3D2R is around until Friday so you should have some more chances to snag them.
Learning experiences are good, especially when you are successful!

From: Chandranet
Topic: 592 Message: 592

I just worked PY3ED (Brazil) on 10M/PSK31. It is very active and pretty easy to work. The SSB side is very busy as well (on 15m also). Lots of split operations, too.

These earlier posts about the DXpeditions inspired me. Thanks for the motivations!

Damon,

I just went and took another look. The QSO count was just short of 700. We had a few dupes and we missed a couple that were captured on paper, so roughly 690 give or take.
We worked 46 states (Missed: AK, HI, NE, & ND). We also worked 11 countries: Cuba, Germany, Spain, France, Mexico, Romania, Italy, US Virgin Islands, Poland, Costa Rica and Canada.
If you need any other detail, let me know.

Who says you can't teach an old dog new tricks?

My dad, John Haley K0COI just passed his Amateur Extra exam.? Not bad for an 80 year old!? He's been a ham since 1956 and had his General all these years.

My parents are stopping by for a few days, so John will be at the club meeting Monday with me.? Please join with me in congratulating him.

?

Yes, work Rick if you get the chance. He offers a really nice
lighthouse certificate and turnaround is very fast.
He usually attracts quite a pileup on 20M, but it should be much easier
on 10!

Ron,

I hope you were able to work him. He and his neighbor E51USA have both
been strong at times over the past month.
The problem is that both of them tend to like to chit-chat and a pileup
usually ensues as they get spotted. Then before long
band conditions change and they are gone. Hoping one of these times to
catch one of them just as they come on the band
so I can get first crack! :-)

638. T32C on 20M

Yahoo group: laterisersgroup
Date: 2011-10-10 03:43:19 UTC
From: Darren Mende - K5QB
Topic: 638 Message: 638

Good Evening,

I hope everyone had a great weekend. Lots of DX on the air for everyone to grab. I really appreciate the heads-up from the local spots. It gives us a real idea of propagation.

For those that are still awake, T32C is on 20M at 14.180.5. I know that doesn't help the General Class folks, but gove a listen to check propagation.

See y'all tomorrow at the meeting.

Ron,

I have heard stations from Guam a couple of times in the past couple of weeks on 10M, but they were not in a position to take calls.
First times I have ever heard Guam, so conditions are definitely improving! I am currently in northern Indiana and T77NM from San Mario and other stations were just booming in on 10 this afternoon, so it was an excellent opening. Hope you get to work Guam soon!

Yes, I imagine he is hard to work. One might have to watch the movie
"Frequency" to get some ideas on how to make that happen.
I also understand that Elvis (I think his call is KH2ING) is very hard
to catch there on Guam because he works so many shifts at the local 7-11.
Still, I imagine that if you can figure out how to work Jim M., you'll
have a decent shot at snagging Elvis P. :-)

I now return the reflector back to normal amateur abuse.

Good DX,
Stan

Late Risers,

Wow! What a week. With 10 meters open like a 24 hour convenience store, working DX can be pretty addictive.

When I left Plano I set the goal to get my DXCC by the end of this year. At that time I had 86 countries confirmed.

It took me over 7 months and a lot of help from Scott (AE5SG) and the mighty sunspots to get my HF pursuit going again.

With band conditions these last two weeks especially on 10 meters, you really have to try hard to avoid working some DX. In the last two weeks, I added a bunch of countries to my total. I'm running barefoot about 50/50 Between PSK31 and SSB.

After researching my contact list, it appears the dipole is oriented almost perfectly for Europe, the Middle East and on the other side for the southwest pacific. I would like to take credit for that miracle of engineering but I have to credit the tree guys I hired to trim the trees in the backyard. Who could know they were antenna experts?

My total list of DX entities stands at 103. I hope I get the QSL's

One of the things that keep me interested in this hobby is the ability to reach out to distant, exotic places. I am kind of a nerd on history and geography, so when I get a contact in a strange place, I check it out on the web. These are some of the new places I hit. This is your Cliff's Notes social studies lesson.

New Caledonia - Originally discovered by Capt. Cook, the French took it over in 1853 and made it a penal colony(delightful). Was a big American base during WWII (the big one). Now an independent overseas territory of France.

Slovak Republic - Formerly part of Czechoslovakia until the end of the Cold War. It is now an independent country. Yes, there is also a country called Slovenia, which is not the same.

St. Helena - If you know the expression, "between a rock and a hard place?" This is the rock. Wikiipedia said it best; Saint Helena is one of the most isolated places in the world, located in the South Atlantic Ocean more than 2,000 kilometres (1,200 mi) from the nearest major landmass. Discovered by the Portuguese, claimed by the Dutch , it was taken over by the British in 1658. It's chief claim to fame is the fact that it was Napoleon's prison after he was deposed as emperor of France. An escape proof jail.

Estonia - One of the Baltic countries that was taken over by the USSR and has re-emerged as an independent nation since the fall of the Soviets.

Balearic Is. - Actually a province of Spain but is treated as a separate DXCC entitiy. Located in the Mediterraean Sea, off the south coast of Spain. If you hear the callsign prefix EA6, grab it.

Christmas Island (Kiritimati) - T32C, pronounced Christmas because the natives pronounce the "ti" as an "s". Bet you didn't know that! It is part of the Republic of Kiribati and one of 32 atolls straddling the equator and near the international date line. Formerly a British possession, it is now a separate nation and a member of the British Commonwealth.

Martinique - Columbus found it in 1493 but sailed right past it! It was fought over and occupied by the French and British several times during the course of various wars between them in the 17th, 18th and 19th centuries. Today, finally It is an overseas department (province) of France with French Citizenship. Looks like a great place to visit.

Cook Is. - Discovered by Capt. Cook, who promptly named it the Hervy Islands (Who's he?). The first mention of the Cook Islands appeared on a Russian Navy chart in 1820; go figure. The largest island is Rarotonga. The people hold dual citizenship with New Zealand, the closest country with cable TV and McDonald's!

Saudi Arabia - Well, you know; all that oil. One of the few absolute monarchies on the planet. I worked this guy on 10 meter PSK31. Ham radio has only been allowed in Saudi since 2004. I didn't know that. Its' good to be king!

Fiji - The place where the crew of the Bounty discovered that life could be better. Was a British colony until 1970 when it became the Republic of Fiji.

Be sure to study this material as there will be a test later.

Wow! 10 meters continues its hot streak.

Just worked EA9BC. 28.120 PSK.

Guess where that is? Not Spain, not the Azores, not the Canary Islands. It is the city of Mellila on the coast of North Africa. Just a little enclave into Morocco and technically a province of Spain and a separate DX entity.

JA8CMC

Thanks for the tip Michael. I was able to make the trip. He is in Sapporo on Hokkaido, the northern of the three main islands of Japan. I needed that island for IOTA.

What was funny is that earlier I was listening him in a QSO with a guy in Argentina. He was speaking in Spanish and then repeating the same phrase in Japanese/english. Some things don't translate like "59" , Kilowatt and cubical quad(although the "q" sounds did sound a little funny)

Anyway, I enjoyed listening to him.

Wow! You guys are killing me with all of this DX while I'm up here off the air. :-) I will mention something to consider when 10M is really open. My friend up here in northern Indiana made an interesting contact over the weekend. He worked Wales on 10M FM at 29.6MHz.
For those of you that have the capability, it might be worth your while to check around there once in a while. Even for those that don't, maybe check around 29.0 for any AM contacts. Remember there is more to phone than just SSB.

Hi Ron,

Yes I know, but it just wasn't practical to bring a rig for this trip.
Now that I'm back in Ft. Wayne, I may co-op my friend's station to play
a little.
That's a great catch on 20M. I'd say the vertical is working well .
Guess I need to get PSK working at home.
Still, my DXCC count is at 113 and hopefully climbing, all on phone, so
I can't really complain.
Still trying to figure out how to best get that QSL out of OD5NH in
Beirut. :-)

I had a great time at PBF as well. Hope you can come up again soon. I
know we'd all be glad to see you!

665. RA2FB - Kaliningrad

Yahoo group: laterisersgroup
Date: 2011-10-19 17:38:55 UTC
From: RonL
Topic: 665 Message: 665

Keep a look out for this guy on 10M PSK31. His Call Sign looks Russian but the RA2 prefix is actually Kaliningrad. It counts as a separate DXCC entity.

Kaliningrad was a Russian seaport city on the Baltic Sea until the demise of the Soviet Union. When Lithuania broke away from Russia, the city was isolated from the Motherland.

While it is still Russian territory, the nearest Russian border lies 200 miles to the East.

I wonder how many Hamski Kaliningradskis there are? How's my Russian?

672. Buddipole Experiments

Yahoo group: laterisersgroup
Date: 2011-10-23 17:53:46 UTC
From: Kipton Moravec
Topic: 672 Message: 672

John Galvin N5TIM asked me to bring my Buddipole to the SET on November 5. So Dan KE5LHC and I decided to take our antennas to Liberty Park yesterday and see if we can make them work on 40 and 80 meters.

Dan told me about this writeup so I got the parts and built one.
http://lib.store.yahoo.net/lib/buddipole/nvis2008.pdf

I stopped by BA Industrial and got eight 3/8"-24 bolts, 1" long stainless.

I also drove to Wylie to Tractor supply and got their $1.99 electric fence posts for the wires to attach to. They have a place to put your foot on to help push them into the ground. They seem like quite a deal at $1.99 each.

First thing I discovered was that the bolts they said to use were too long. they said 1" but mot more than 1/2 inch would go i until it bottomed out. So get 1/4" or 3/8" long bolts.

Next problem I had the wire too short. The instructions said cut at 30 feet and you will use 29. I added 5 feet to the wire and was too long. 31 feet was about right for 80 meters. Fortunately I had my soldering iron with me.

The 80M was pretty narrow band. It got down to about 1.4:1 but quickly went back to 5 in different parts of the band.

So we put tape marks where we found the length ideal for the
ARES - Emergency and tactical traffic Net Night: 3873 KHz LSB.

Then we moved the taps and shortened the wires for the 40 M band. What we discovered was that the bandwidth was much better and we were at 1.1:1 SWR for much of the 40M band. So we checked the frequency

ARES - Emergency and tactical traffic Net Day: 7285 KHz LSB

And we were able to get about 1.1:1 there also. We marked the spots with tape and we had accomplished what we wanted.

We have enough materials to add the wire and bolts (need shorter ones) to add this to the PARK Buddipole. I plan to do this at PARK in the PARK on October 30.

Rpbert W5IUA has asked me to get the word out.

I have a Rohn 60' mast with top two sections bent enough that they need to be pulled out (turning it into a ~40' mast. I close on my house October 31 and MUST get someone to come pull this mast apart and haul away. It will make a good mast for someone who needs it.

Ron,

Glad you took a break and were able to work him so easily. I got him on
my first call as well. Pretty cool!

Michael - Glad you were able to snag them earlier. A great contact to
have in the log.

Should be lots of DX this weekend during the CQ WW DX contest.
It runs for 48 hours starting at 7pm Friday.

The exchange is simply signal report + CQ Zone.
Here, by default that would be 59 + Zone 4.

Here's hoping the propagation holds or even improves.
Good DX everyone!

681. Plano Amateur Radio Klub invites you to Halloween PARK in the Park (Oct 30, 2011)

Yahoo group: laterisersgroup
Date: 2011-10-28 13:50:55 UTC
From: Greg Evans
Topic: 681 Message: 681

Reminder for Halloween PARK in the park
Hello Greg!
You are invited to the following event:

Halloween PARK in the Park

Event to be held at the following time, date, and location:

Oct 30, 2011
1:00 PM - 4:00 PM

Oak Point Park
2801 E. Spring Creek Parkway
Plano, TX 75074

View Map

Our first PARK in the Park for this fall will be held at the Oak Point Park on Sunday, October 30th between 1 and 4 PM. And we are going to have a howling great time! Bring your entire family! We will have candy gifts for the kids, a little fun in radio for the kids, and a lot of experimenting with the club's new BuddiPole and whatever else you bring!

And bring your favorite dish (not potato chips - we have plenty of those) to the Park. We will have some great chilli, to go with it!

So, dust off the cobb webs from your costumes and dress up! Hey, you might even win something cool in the costume contest! Who knows you might get published by our famous photographer!

Join us on this Sunday and lets have a great time!

Please visit the event website at parkinthepark.eventbrite.com and register today - please sign up so we know how many will be joining us for the fun and food!

Share this event on Facebook and Twitter

We hope you can make it!

Cheers,
Plano Amateur Radio Klub

Subject: [Bulk] W3T puts Nikola Tesla's laboratory Wardenclyffe On The Air!

Hi,

Wardenclyffe, Nikola Tesla's last laboratory will be on the air November 5th as special event station W3T! Wardenclyffe is located in Shoreham, NY on Long Island. W3T is part of a network of special event stations that are helping to raise awareness for the effort to purchase the laboratory and restore it into a science museum. To read more about the effort to restore Wardencyffe, please check out http://www.teslasciencecenter.org. The other stations in the network are N3Y which will transmit via satellite and possibly HF from the New Yorker Hotel, Tesla's last home in Manhattan, and YU0TESLA which will transmit on 20m as well as other HF bands. For the latest updates on what frequencies to catch the stations on and a sneak peek at the QSL cards and QTHs, go to http://copaseticflows.appspot.com/teslaevent.

If you're in the Shoreham area on the 5th, please stop by the station!

Also, be sure to check out the Radio Central Amateur Radio Club. They will have the Marconi radio shack on the air a few miles away transmitting as a special event station commemorating the 90th anniversary of the opening of the RCA transmitting antenna farm in Rocky Point, NY. More details are available at http://www.rcarc.org/. Without the RCA club W3T would not be on the air. Their help has been invaluable!

If you have any questions, or you'd like to help out, please feel free to contact me at hcarter333@....

Not really where I was going with this. We're all "real" hams, regardless.
Just trying to nudge some folks into trying 10, as it has been so much
fun recently.
Over the weekend, I suspect that with 100 watts and a tuner to load up a
hunk of wet string,
one could've snagged a fair amount of DX. I personally worked 60
countries on 10,
which was more than on all the other bands combined.

Then again, if you're not into DX, well...nevermind.

703. CQ WW DX Stats for me

Yahoo group: laterisersgroup
Date: 2011-11-02 17:15:10 UTC
From: RonL
Topic: 703 Message: 703

Guys,

I only put in a little over 9 hours on the air over the weekend.

My plan for this year is to complete my basic DXCC. Coming into this past weekend, I had 89 confirmed and a total of 112.

I tried to pick my way in between the guys running 4 megawatts. I was 90% on 10 meters and added 9 countries to my worked total.

I only made 41 Q's but in line with my DXCC plan, I spent a lot of time listening and passed up lots of contacts with countries I had confirmed.

New countries for me
Montenegro
Market Reef
Guyana
Gambia
Fiji
Morocco
Guam
Tonga
Jamaica

41 Q's
39 Countries
23 Zones
7,192 Points

I now have 121 countries and 91 confirmed. Only 9 to go.

I also heard but could not work
S. Korea
Indonesia
Tanzania
Turkey

73,
Ron, AE5NO

Ron,

Thanks for putting this out. It prompted me to take a closer look at my totals.
It's amazing how close we are on DXCC numbers. I now have 125 worked and 91 confirmed (should hopefully go higher when my LOTW log gets processed through the backlog)
all on SSB.

New countries for me this weekend were:
The Gambia
Angola
S. Cook Islands
Ceuta/Melilla
Guam
Kalingrad
Montserrat
Bermuda

Also heard but couldn't work:
China
Indonesia
Ascension Island

I played most of the weekend and spent about 2/3's of my time on 10M.

Contest Totals for me:
247 Q's
70 countries
25 zones
118,494 points

73,
Stan
NW5Q

Last message I saw was that LOTW was forecasting a 33 hour delay, but
it's been closer to 40 in my case.
Lots of activity and lots of big logs to process. Saw this after the
WPX contest last spring as well.
Should all settle down in a couple of days.

This wild wind will hopefully die down in a couple of hours. Took a chance and left my antenna up. So far so good.

It most definitely is time to play on 10. Solar Flux is currently 158 and sun spots are 109. I added 2 more countries to my worked list this afternoon in less than an hour.
Fiji - 3D2T and Tahiti -TX3T. Also, when 10M is open, be sure to check the FM portion of the band - 29.3 and up. FM simplex DX is often there to work,
plus, repeaters (29.52-29.68) add a new wrinkle. Last week I worked a Dutch station through what appears to have been a Belgian repeater on 10M. Amazing thing is that the signal here was S9+20 and the repeater is listed as only outputting 15 watts. Not really a big QSL opportunity, but pretty cool nonetheless.
Also, whenever 10 is open be sure to check 12 meters. A lot of unique DX shows up there.

726. Special Event Station

Yahoo group: laterisersgroup
Date: 2011-11-04 16:54:54 UTC
From: AE5NO Ron
Topic: 419 Message: 726

My daughter Kristin is getting married tomorrow.

To celebrate the event, I will be operating Special Event Station W5FOT/B (Father of the Bride) at the reception. Transmissions may be garbled as a result of large quantities of chemical supplements required to get the operator through the ceremony.

On the following day, the station call sign will be NM5M/L (No More Money Left). Unfortunately, the latter call sign will be QRT as I will have hocked my gear to pay Rocco the loan shark.

Ron,
Congratulations are in order! To help you celebrate this momentous event in life, I too will in-bib in bottled chemical supplements tomorrow in support of you and good cheer to your Daughter and son-in-law! I hope they have a wonderful life! As to Sunday, I say this....

Alas, poor Ronald! I knew him, Horatio; a fellow of infinite jest, of most excellent fancy; he hath borne me on his back a thousand times; and now, how abhorred in my imagination it is!

Glad you were able to work him!
Yes, the capture effect really makes it different.

Interesting too, for some reason this guy likes FM on 10.
Yesterday while on SSB, he was called by a station in Greenland
and asked that op to switch to FM right in the middle of the pileup
because he wanted an FM contact to Greenland.

From: Stan
Topic: 757 Message: 761

Michael,

Good question. I think the concept of FM on HF is a bit foreign to all of us.
Yes, that button would be it. Had you tuned to 29.100 in time and pushed the button to FM you would have been all set.

There is also an FM duplex mode on 10M for accessing repeaters (similar to how we access VHF/UHF repeaters).
Your radio probably has a separate button for duplex operation. The offset on 10M is 100KHz.
Lately a couple of repeaters in New York have been strong here, with a lot of DX signals on them. One has an output at 29.620 (input 29.520) in upstate New York. The other has an output at 29.660 (input 29.560) which is in New York City. The one in NYC at least is also linked to repeaters
on 6M and 70cm in that area.

Also the national FM simplex frequency on 10M is 29.600 and when the band is open there are often signals there.

Give a listen if you get a chance. Just one more thing to explore. :-)

Stan,

Yes, though the weirdest was Senegal on 10M FM. I already had worked 6V7T earlier this year on 20, but was glad to have a 10M Senegal for the log.

I am really being picky. I would have never guessed the day would come when I would deliberately pass up a JA or a VK, because I was looking for something else.

Haven't gotten a LOTW conf in a couple days. My LOTW seems stuck on 11/4 though I have uploaded q's everyday. They must still be running behind.

I am at 97 confirmed. Got Marquesas the other day too.

Topic: 763 Message: 768

Ron,

Yes, glad I could share that surreal FM experience with you. I too had Senegal confirmed before on 20M (6V7D).

I don't find myself passing up many JA's or VK's, if they are easy to work, (but I do find myself doing that some with DL's and EA's). Surprised how many of those contacts I've actually made. Strangest one was VK6ANC in northern Australia. I have now worked them both short and long path, which is a first for me!

Odd about your LOTW. I've been uploading files daily and I thought they were pretty much back to running normally.
In fact, I just got my number 96 - Antigua.

And talk about a little strange, David (KF5IIL) and I had a short 10M FM QSO today via a repeater located in the Catskill Mountains of New York. Definitely fun to explore new modes!

769. LOTW Delays

Yahoo group: laterisersgroup
Date: 2011-11-08 14:12:05 UTC
From: AE5NO Ron
Topic: 769 Message: 769

Laterisers,

The log processing delay for Logbook of The World (LoTW) remains at approximately 60 hours, with approximately 8000 logs queued for processing. PLEASE DO NOT UPLOAD THE SAME LOG MORE THAN ONCE. According to ARRL IT Manager Michael Keane, K1MK, the League has implemented an interim "fast lane" for processing logs: "In order to do this, resources have been shifted from servicing interactive requests to the processing of logs. As a result, LoTW users may notice some sluggish performance. Since these changes have been put into place, the number of logs waiting to be processed has been reduced by approximately 20 percent. The expectation is that this new measure will continue to make inroads into eliminating the backlog."

This from the LOTW Facebook page. I am going on 4 days with no updates.

From: Stan
Topic: 769 Message: 770

Ron, that message was posted last week. Here is the update from yesterday:

Nov 7, 2011: Logbook of The World is Processing Logs -- Updated 7 November -- the LoTW system is working, sometimes more slowly than it should. Staff continues to investigate the problem. Thanks for your patience.

Updated 4pm Eastern Time

Perhaps folks are beginning to upload logs from last weekend's Sweepstakes, which may be bogging it down again.
Admittedly, I uploaded a file last night and it has not yet processed, but I uploaded one Saturday night and one again Sunday night and they both processed by the next morning.
I am also getting regular confirmations of contacts already loaded (had 3 more this morning). So I'm puzzled by the problems you are experiencing.

Now on 21.365. Very clever the way they manage the pileup. They have a JE station taking roll call and then sending them one at a time direct to the CY0. That way you get a clear channel for the contact.

Still waiting on my LOTW files but I am not alone.

I just looked at the LOTW Yahoo group and there are guys there with files waiting 7 days. My last file processed was on 11/4, so I am not as bad off as some.

They must be really slammed or majorly screwed up.

777. Re: [laterisersgroup] Re: LOTW Delays

Yahoo group: laterisersgroup
Date: 2011-11-09 03:00:52 UTC
From: Stan
Topic: 769 Message: 777

I think the answer is probably a bit of both. I don't see how they can still be running files in the order received though,
because I uploaded 2 files the night of 11/5 and both had run when I checked the morning of 11/6. Now these were
small files, so I don't know if they are categorizing them by size or what. My file uploaded the night of 11/6 still has not processed, so I'm suspecting that they got hit with a bunch of new files from the CW Sweepstakes from over the weekend which has overloaded them again.

Clearly they are fighting some kind of problem, plus they seem to simply have too little processing capability available to support their subscriber
base, which by the way is only 45K. Imagine what an unmitigated disaster this would be if any significant percentage of the ham population subscribed.
I sure hope they get it figured out soon because this is the beginning of contest season and they are likely to see large volumes of logs most every Monday.
People are likely to get frustrated and simply stop using the system and that would be unfortunate.

785. JIDX Phone Contest this weekend

Yahoo group: laterisersgroup
Date: 2011-11-10 05:23:14 UTC
From: Stan
Topic: 785 Message: 785

We were talking about Japan on the 2M simplex net/roundtable tonight and I was reminded of this.

This is particularly directed to those of you who have had limited or even no success working Japan. This Saturday presents a great opportunity. The contest will bring out most of the big guns in Japan and they will be looking to make contact with you! The contest technically runs from 1AM Saturday until 7AM Sunday local time, so essentially all day Saturday. That won't matter too much though as the best times will likely be Saturday afternoon and evening. Starting by about 2PM Saturday, they should start showing up on 10 and 15 meters. There should be enough of them that pileups won't be huge (with maybe a few exceptions). On 10M be sure to tune up above 28.500 (unless you're a Tech) as you may well find them all the way to 28.900. On 15M they may even go above 21.400. Don't worry if they are a bit weak. If you can copy them, chances are they will hear you. I have had tremendous success making contest contacts to Japan with stations that were only S3-5. They typically hear very well and usually do an excellent job of copying callsigns. Openings on 10 and 15 should hold until sunset or even a bit beyond. Then, migrate to 20M and see if there is activity there. Pileups may unfortunately be a larger. Late at night - midnight or later(local), openings may appear on 40M as well and it is possible to work some of them with only 100 watts because I have done it. However, you must be able to get into the Extra portion of 40 to have much of a chance (sorry Generals).

Now a word on the contest specifics. Some of you may feel a little intimidated (even turned off) by it being a contest. Don't be, as it actually presents a great opportunity and it greatly simplifies things. The exchange in this contest is very basic. The JA station will give you: signal report and a 2 digit number for their prefecture (state).
Your exchange back is: signal report and CQ zone. The default signal report in any SSB contest is 59. Our CQ zone is 04. So you may receive an exchange like 59-25 and would return 59-04, or even simply 59-4. That's all it takes. Since you aren't really in the contest and won't be submitting a log, the exchange you receive is not real important. You just need to make sure that you have the Japanese station's call correct (listening for a couple of minutes should ensure that). Then make sure that they have your call correct and receive the 59-4 exchange correctly and you have a valid contact to Japan. My experience is also that they are pretty good with eQSL and LOTW to make confirmations easy.

Last year with 100 watts and a simple wire antenna I was able to make several contacts with no focused effort. This year conditions are drastically better, so it should be a whole lot easier. Give it a try, you might be surprised at your success!

Good luck!

Stan and group,

Posts like this are making this group one of my favorite resources. I am not a "contest guy" however, your overview gives me the confidence that if I have some time and there is an opening this weekend, I can make some contacts and not feel intimidated.

What a great way to educate all of us.

Keep it up!

Ted

Yes, it is a scientific fact that ham stations west of the US hear us better because of the rotation of the earth. They get that slingshot effect. On the other hand hams transmitting in the westerly direction are at a disadvantage.

I'll be working the contest hoping to pick up a station on Kyushu island for my IOTA tally.

Subject: [laterisersgroup] JIDX Phone Contest this weekend

We were talking about Japan on the 2M simplex net/roundtable tonight and I was reminded of this.

This is particularly directed to those of you who have had limited or even no success working Japan. This Saturday presents a great opportunity. The contest will bring out most of the big guns in Japan and they will be looking to make contact with you! The contest technically runs from 1AM Saturday until 7AM Sunday local time, so essentially all day Saturday. That won't matter too much though as the best times will likely be Saturday afternoon and evening. Starting by about 2PM Saturday, they should start showing up on 10 and 15 meters. There should be enough of them that pileups won't be huge (with maybe a few exceptions). On 10M be sure to tune up above 28.500 (unless you're a Tech) as you may well find them all the way to 28.900. On 15M they may even go above 21.400. Don't worry if they are a bit weak. If you can copy them, chances are they will hear you. I have had tremendous success making contest contacts to Japan with stations that were only S3-5. They typically hear very well and usually do an excellent job of copying callsigns. Openings on 10 and 15 should hold until sunset or even a bit beyond. Then, migrate to 20M and see if there is

activity there. Pileups may unfortunately be a larger. Late at night - midnight or later(local), openings may appear on 40M as well and it is possible to work
some of them with only 100 watts because I have done it. However, you must be able to get into the Extra portion of 40 to have much of a chance (sorry Generals).

Now a word on the contest specifics. Some of you may feel a little intimidated (even turned off) by it being a contest. Don't be, as it actually presents a great opportunity
and it greatly simplifies things. The exchange in this contest is very basic. The JA station will give you: signal report and a 2 digit number for their prefecture (state).
Your exchange back is: signal report and CQ zone. The default signal report in any SSB contest is 59. Our CQ zone is 04. So you may receive an exchange like 59-25
and would return 59-04, or even simply 59-4. That's all it takes. Since you aren't really in the contest and won't be submitting a log, the exchange you receive is not real important. You just need to make sure that you have the Japanese station's call correct (listening for a couple of minutes should ensure that). Then make sure that they have your call correct and receive the 59-4 exchange correctly and you have a valid contact to Japan. Ted,
Thanks for the kind words. I'm glad you find the posts useful.

Two quick comments:
1. With the sunspot number over 200 and the solar flux above 175, it's highly likely there will be openings to Japan Saturday afternoon.
2. No need to be a "contest guy". Contests merely offer a "target rich" environment, greatly increasing your chances of achieving your objective, which in this case is to put some JA's in your logbook.

Ron,

Good one!
I sure would like to see the "science" behind this unusual claim.

You see, I ran a few rough numbers as follows:

Speed of Light (radio waves) through free space = 186,262 miles/sec
Velocity factor of air = 1.003
Speed of light through Earth's atmosphere - 186,262/1.003 = 186,226 miles/sec
Circumference of Earth at the equator (worst case) = 24,901 miles
speed of rotation =24,901 miles/24hrs = 1038 mi/hr / 3600 sec/hr = .29miles/sec
.29miles/sec / 186,226 miles/sec = .00016%

So there's a slingshot effect generated by a speed change of .00016%?
Must be an extremely minuscule slingshot.

It is however scientific fact that the stations west of us with the most aluminum in the air generally hear us better. :-)

Good luck with Kyushu! Did you get a chance to work XF1C on Coronados Island?

Subject: HELP PROMOTE THE ARRL AND THE HOBBY AROUND THE WORLD

*You are invited to help spread the word about this wonderful hobby
amateur radio to a global radio audience!*

You are invited to call into a live radio show tomorrow Saturday November 12, 2011 between 4 PM Central and 10 PM Central.

This is an International Shortwave Radio broadcast with global coverage.

You are invited to call in and tell us about your local club or organization and share with us things your group may be doing.

We would like to hear about your interests in the hobby and what it
was that got your interest and opened the door to the hobby.

There are millions of shortwave listeners around the world, so this a
good opportunity to tell them about our hobby and the ARRL.

So spread the word to all radio amateurs that you know and let them
know they are invited to call in.

Saturdays broadcast is the launch of a new 100,000 watt shortwave
transmitter for a new shortwave facility, WTWW just outside of Nashville, TN.

The frequencies are from 4 PM till 6PM Central 9990 KHZ and from 6 PM
till 10 PM Central 5085 KHZ.

A link to a live stream will be posted on
http://www.tedrandall.com
<http://www.tedrandall.com/>

We will be reading emails over the air, taking requests and dedications and most important putting as many radio amateurs on

the
air that will call in.

Lets tell the world about our hobby and spread some
international
good will!

The phone number to call in starting tomorrow at 4 PM Central is
615-547-9520

The world will be waiting to hear from you!

Thanks for your participation and 73

798. Video Phone Call for iPhone and Android users

Yahoo group: laterisersgroup
Date: 2011-11-12 17:07:49 UTC
From: Michael Payne
Topic: 798 Message: 798

Hey guys,

There is a video chat app for iPhone and Android called TANGO. This lets you talk and see the other person (and they see you) when you call them. It is great if you have a wi-fi or an unlimited data plan. Several of the guys have this app on their phone. As I understand it, TANGO let's iPhone and Android talk to each other. It's pretty cool. Try it!

73,

Michael KE5TJL

From: Michael Payne
Topic: 798 Message: 799

I did some looking at the website for TANGO and everything is free, the software, and the calls. I copied the info they provide and here it is. If you do install it, call me at 972-335-2437 and try it out. There is no cost.

Tango is a free mobile video communications service that allows you to connect with friends and family to conveniently capture and share life's every day moments. Tango lets you see a smile while you hear the laughter that goes with it; lets you see the twinkle in her eye that accompanies her words. With Tango, you capture life as it happens. Tango works on the PC, iPhone, iPod touch, iPad, Windows Phone 7 and all Android 2.1 or later phones and tablets over 3G, 4G, and Wi-Fi, giving you the ultimate flexibility in how, where and with whom you communicate. Tango was designed for "mobile" so it's easy to use and fast to get started. So, why wait to Tango?

The ultimate in convenience -- Tango works on the PC, iPhone, iPod touch, Windows Phone 7 and hundreds of and Android phones and tablets, and 3G, 4G and Wi-Fi. Just go ahead and Tango.

We find the people on Tango that you know --- Using your contact list, Tango automatically finds the people you can Tango with --- and you can invite anyone else by text or email. On Android phones you can even Tango directly from your address book.

Easy to use, easy to get started -- There's no log in or password, and creating an account takes just seconds. Tango works the same on every device so you don't need to learn anything new. And it was built for "mobile", making the experience simple and intuitive.

Save money -- Make free video calls and free phone calls to friends and family in the same town or around the world.

Ideal for mobile -- Conserves your battery, saves your mobile data plan, and is optimized for mobile networks such as 3G and 4G to give you the best calling experience --- everywhere.

It's just like being there -- Tango's high quality video makes the experience as real as if it were face-to-face.

Communicate in a way that fits the occasion -- Easily switch from video to voice and back with just a tap. Use Tango on your phone, iPod touch, or tablet --- your choice.

The ultimate in convenience – Tango works on the PC, iPhone, iPod touch, Windows Phone 7 and hundreds of and Android phones and tablets, and 3G, 4G and Wi-Fi. Just go ahead and Tango.

We find the people on Tango that you know — Using your contact list, Tango automatically finds the people you can Tango with — and you can invite anyone else by text or email. On Android phones you can even Tango directly from your address book.

Easy to use, easy to get started – There's no log in or password, and creating an account takes just seconds. Tango works the same on every device so you don't need to learn anything new. And it was built for "mobile", making the experience simple and intuitive.

Save money – Make free video calls and free phone calls to friends and family in the same town or around the world.

Ideal for mobile – Conserves your battery, saves your mobile data plan, and is optimized for mobile networks such as 3G and 4G to give you the best calling experience — everywhere.

It's just like being there – Tango's high quality video makes the experience as real as if it were face-to-face.

Communicate in a way that fits the occasion – Easily switch from video to voice and back with just a tap. Use Tango on your phone, iPod touch, or tablet — your choice.

The Japanese contest stations are starting to roll in on 15M with good signals - S7 or so. Stations are below 21.300 so far.
Just as a reminder, the exchange from this end is 59 - 04 if you want to try to work them.

I installed the Tango app on my phone and had a call from Scott. It was then I realized that the camera on my phone was on the opposite side of the Droid phone. When I could see Scott, he couldn't see me unless I turned the phone around and then I couldn't see him. I guess you could call it simplex video.

I don't think the designers of the phone had Tango in mind when the designed my phone.

That is a bummer! I figured your phone had a screen side camera lens. Maybe you could rig up some small mirror araingement or stand in front of a mirror.

Check your phone. Most Androids have 2 cmeras. A High Resolution one for taking pictures, ad a low res one for video chat. You have to switch cameras.

Go to the photo application, and switch from Main to Secondary.

805. JIDX Contest Results

Yahoo group: laterisersgroup
Date: 2011-11-13 03:45:23 UTC
From: Stan
Topic: 805 Message: 805

I don't know if anyone else got a chance to play in the JIDX Contest today, but since I started the thread,
I figured I'd at least provide the group with an update on my experience. While the openings on
10 Meters were a bit disappointing, 15 Meters was impressive, staying open until after 0200 UTC.
I spent about 3 hours on and off tuning around, working those stations I could (which was most of the ones I heard).
Here are my results:

10M - 7 contacts in 6 prefectures (states)

15M - 26 contacts in 18 prefectures (states)

Total - 33 contacts in 19 different prefectures (states)

(There are a total of 50 prefectures in Japan)

Ron - I did not hear any of your wanted JA6's

In case anyone wonders about my station, I am using an 80M off-center fed dipole at about 30 feet,
supported by push up poles temporarily lashed to my fence. The antenna is in an L horizontal configuration
so it can fit on my lot. I'm driving it with an Icom 746-Pro running 100 watts. With the tuner in the
746, the antenna works on all bands from 80 to 10 Meters. With current conditions, it simply doesn't
take a whole lot to be successful. I worked more than half of these stations on the first call.

I'm curious If anyone else had success today? If so, please post it to the group.

I made a dozen contacts today. I chose not to get up at 2 AM, so had to wait till the late afternoon for Japan to come in. I didn't hear any J_6 prefixes and didn't see any spots on the two DX Clusters I monitored. I guess the ham population on Kyushu is small proportionately.

I got my paper QSL from Guam today. So that gives me # 53 for IOTA. IOTA doesn't accept electronic confirmations, except as logs submitted for their sponsored contests. Bit of a sticky wicket, eh what?.

I've been saving the foreign stamps that come when I receive QSLs now. Some are quite striking. I'm going to mount them on some kind of display

Subject: [laterisersgroup] DSTAR HELP!!!

I am using a DVDongle, but It tells me that transmit is not enabled. I do login to the PARK node, but all I can do is listen. I really want to get in the DSTAR contest so that is why the all caps shout!

What do I do so I can transmit...

Here is the feed back from the DV Dongle Software

Audio input device changed to Microphone (High Definition Aud

Connecting to gateway K5PRK

state change 2 Connecting to K5PRK

Opening audio in device: Microphone (High Definition Aud

Audio input sample rate supported without resampling

Audio in samplerate=8000 framesperbuffer=160

Opening audio out device: Speakers (High Definition Audio

Audio output sample rate supported without resampling

Audio out samplerate=8000 framesperbuffer=160

Audio devices opened

Audio device started

state change 4 Authenticating...

login OK, transmit not permitted

state change 6 Connected

Login succeeded, transmit not permitted

DStar gateway text message received ->Welcome to the K5PRK D-Star repeater

Thanks!!!

Greg,

I have a DV Dongle, but I did not re-install it when I moved down here. If I can find it, I will probably try to sell it.

I lost interest in Dstar because I couldn't see the benefit of it over regular VHF/UFH FM. Unless you are involved with an EMCOMM group where it is standard, there doesn't seem to be much point to using it at all. IMHO, Dstar seems more like a solution in search of a problem.

That being said, I suggest if you haven't already done so, you join the D-star Yahoo group, where there are plenty of experienced folks who can assist with Dstar issues.

812. 2011 Marathon Communicators needed (as in more)]

Yahoo group: laterisersgroup
Date: 2011-11-13 18:23:01 UTC
From: Kipton Moravec
Topic: 812 Message: 812

Just another plea for communications help with this years White Rock
Marathon. We are still short communicator and need to fill the holes.
If you have not already committed to help we ask you to consider coming
on out and helping this year. We need you back in the fold.
Email Bob, W5BJ at w5bj@... if you are ready to jump on the WRM team again this year.
If you know anyone interested in helping out ... how about mentioning
the event. Who knows they might just have a ball with amateur radio.
This is also a good learning experience for when the need arises.

Thanks all,

Bob-W5BJ, Garland-W5IDN & John-N5TIM
WRM Committee/Amateur Radio

Wow! I finally got #100 (Czech Republic) tonight on LOTW! All on SSB.
I also worked ZD8ZZ (Ascension Island) last night running 100 watts and
only a vertical dipole on his end on 17M.
Gotta love those sunspots!

Congratulations Ron!

Amazing that we both got to 100 at the same time.

Reunion Island is a great contact! I'm still waiting to get my contact
to Mauritius confirmed though do I have his eQSL.

Just curious if you've been able to get through to the guys on Ascension
Island (ZD8ZZ & ZD8F)?
I was pretty amazed to get through on 17M, but they are a bit tough
because they are using only a vertical dipole array and running 100 watts.
Not a big signal to these parts.

Well, we were pretty close together. I noticed the LOTW finally caught up to my logs last night. That's probably how I got Niue confirmed.

I am going to try and listen for ascension today. But it off the edge of my dipole.

Yes, the pileups have been a problem. I happened to catch them in a lull.
Working DX takes a certain amount of skill, but often timing and luck
play an even larger role.
Hope you catch a break!

Stan, Uh, I have never considered you anything but a friend. Friends get past misunderstandings and move on... That's what makes us human. Sorry, that I haven't responded directly back to your email from before, but I do understand. Also, I come from a database, data analysis background. I love data and databases and the QSLs are right up my ally. Second to that, I have to find someone with an automatic sheet feeder because I want to scan in all of the qso cards - then give the personalized ones to the various operators.... And I want to make a montage of the QSL cards to do a certificate for all of the operators... and something else... Time is less of an issue for me, its motivation. but once I get back on the air the way I want to be, I'll be high and flying!!! I did do the DSTAR QSO party this weekend for a couple of hours and had a great time! Its getting the base station to where it is working great and I don't feel like I am running up hill on glue... And I am having a great time doing the stations/events - the Park in the Park was so great and I finally got feedback last night that made me jump for joy inside. Anyway, I will probably beg for help soon. I hate being frustrated with my antennas ;) 73Greg

Good afternoon.Welcome to the laterisersgroup. We meet every Saturday morning around 6 to 6:30 at Poor Richards restaurant in Plano. We average around 12-20 people that show up every Saturday. I too, live in Frisco, near Rolater and Hillcrest. My name is Michael - KE5TJL and I hope you come to the PARK meeting on this coming Monday evening at 7:00. We meet at Grace Presbyterian Church on 4300 West Park Blvd.If you have a handheld radio, set it to the PARK repeater at 147.180, + PL 107.2. You may have this info already! The club website is www.k5prk.net. Gotta go for now, talk or see you later!

Just got a QSL in from FM1AG, Martinique via France. The French QSL manager used a round, that's right a round stamp about the size of a silver dollar. Now How am I going to put tht in my stamp collage. A stamp with no sharp corners!

Leave it to the French. They always do it with style. C'est la vie!

Kip
The tower & Antennas are located at 833 DENMARK DR MESQUITE, TX 75149 It looks like we will have to remove the antenna's mounted to the tower. Do you know of anyone with a Gin pole. We need to take the weight off the rotator and remove it to lower the mast and remove the 40M rotatable Dipole and the the tri-band beam above it. All of the other antennas have been removed and the feedline pulled from the house. We have 2 attachment points to the house. One at roof level and one about 12-15 ft from ground level. I have a ladder, but I will need to find a way to transport it. I am still trying to locate a trailer. I may have to get one from U-Haul.

Topic: 835 Message: 835

Hello Team!

You are invited to the following event:

HELP - Relocating a Tower

Event to be held at the following time, date, and location:

Nov 19, 2011
8:00 AM

Current Tower Location
833 Denmark Dr
Mesquite, TX 75149

View Map

Hello all of those who still have backs and muscles! We need your help!!!! We are assisting the Boy Scouts of America by relocating an antenna tower. From: 833 Denmark Dr Mesquite, 75149 Deliver to: Clements Scout Ranch 11217 Fm 2970 Athens, TX...

The tower is heavy duty weighing over 200 pounds and is quite long even after the tower is cranked down (approximately 18 feet or so). The tower is installed next to a house (not on concrete platform) and attached at the roof and at 12-15 ft above the ground. It still has two antennas installed above the rotator. We are trying to borrow a gin pole so that we can take down last of the still attached antennas (a 40 m rotatable Dipole and a tri-band). These antennas need to be taken off so we can take the weight off of the rotator before bringing down the towr.

So, we NEED HELP!!! And supplies! We need additional Rope, a second come-along, and anything else you think that will help us bring down the tower SAFELY.

We do not have to transport to Athens until later. But if you have a long enough trailer that we can use, please let us know as well.

Please SIGN UP by emailing Kip at kip@kdream or use the eventbrite tickets here. We need to know who is coming!!!

Please visit parkinthepark.eventbrite.com for the maps to get to the mesquite location. If we do the delivery part on Saturday, we will contact those that get the tickets for the Delivery portion of the project. Please either email Kip or get the event brite tickets so that we can resource plan and keep everyone involved safe!!!

We hope you can make it!

Cheers,
Plano Amateur Radio Klub

Yup, these guys must be a division of RONCO. I can see the TV Infomercial now . . .

Fellow Amateurs, when your RONCO inflatable tower arrives, just blow it up . . . .PFFFFFFFTT! and you are on the air in minutes.

And, when the HOA police arrive at your QTH, use the handy rapid deflation valve to make your tower disappear. Whoosh!

Yes! Your inflatable tower is easy to travel. Simply fold it into the handy travel pouch that clips to your waist.

If you order your RONCO Inflatable Tower, you will also receive the RONCO Portable Bicycle pump for rapid inflation in an exotic DX locales and the RONCO Inflatable Antenna Rotator.

And as an added special offer, we will include the Popeil Pocket Fisherman, to help you survive while you are waiting for the Coast Guard to rescue you.

Order today and we will double your order ! Just think of the possibilities with two towers!!

Call NOW! Operators are standing by.

Ron, AE5NO

Sorry for the duplicate info, but things keep changing. I will send out an update email tonight, if there is any. But, basically, we are only taking the tower down tomorrow...

Please Help The Boy Scouts!

You are invited to the following event:

HELP - Relocating a Tower

Event to be held at the following time, date, and location:

Nov 19, 2011
8:00 AM

Current Tower Location
833 Denmark Dr
Mesquite, TX 75149

View Map

Hello all of those who still have backs and muscles! We need your help!!!! We are assisting the Boy Scouts of America by relocating an antenna tower.
From 833 Denmark Dr
Mesquite, TX 75149 We will be gathering in Mesquite at 8:00 a.m. and we will finish tomorrow when the tower is safely on the ground.

Because this is going to take longer than we originally planned, we will NOT transport to the Boy Scout camp tomorrow.The tower is heavy duty weighing over 200 pounds and is quite long even after the tower is cranked down (approximately 18 feet or so). The tower is installed next to a house (not on concrete platform) and attached at the roof and at 12-15 ft above the ground. It still has two antennas installed above the rotator. We are trying to borrow a gin pole so that we can take down last of the still attached antennas (a 40 m rotatable Dipole and a tri-band). These antennas need to be taken off so we can take the weight off of the rotator before bringing down the tower.So, we NEED HELP!!! And supplies! We need additional Rope, a second come-along, and anything else you think that will help us bring down the tower SAFELY.We do not have to transport to Athens until later. But if you have a long enough trailer that we can use, please let us know as well.Please SIGN UP by emailing Kip at kip@kdream or use the eventbrite tickets. Subject: 2011 Plano Christmas Parade Update

Dear Radio Operator:

Thank you for volunteering to support this year's Plano Christmas Parade on Saturday, December 10th.

I have attached our running list of volunteers. As in recent past years, we will operate two separate nets: The "early" net will be to assist the Methodist Men's Group and the later net will support the Lions Club who have responsibility for the parade once it hits the streets of Plano.

The early net (I'm thinking UHF this year) will run from approximately 6:00AM until 10:00am. The later net (VHF) will start at about 8:00am and is typically over by about noon.

All of us are invited to join the Men's Methodist Group at 5:30am for a discounted breakfast in the High School Cafeteria ($4.00 instead of the normal $5.00). All volunteers, including the Men's Methodist Group, are paying the $4.00 for breakfast as this is a fundraiser. The early net volunteers will need to be assembled at our command post no later than 06:00AM to start your assignment.

If you would, please look at the attached roster of volunteers and let me know the following items for yourself:

1. Which net (aka time) would you prefer to work? 6AM net or 8AM net? (I'll try to accommodate everyone as best I can.)
2. What is your cell phone number?
3. Do you have an HT, Mobile Radio or both?
4. Are you willing to work both shifts? (We may want or need to move some of our operators from the staging area to the parade route.
5. Any special requirements for you? (Examples)
   > Cannot stand for a long period of time
   > Medical requirements require you to be near

restroom facilities

> No HT....mobile only
> Etc.

I will be at the PARK meeting tomorrow (Monday) evening signing up more volunteers.

Hope to see you there.

73's, Tom Yenny - K5LOL

Topic: 859 Message: 859

Hi All:

My friends in the suburbs of Chicago, NS9RC, have a nice description and tutorial for setting up Winlink and RMS Express.

Greg did a great job at yesterday's PARK in the park, so this is a bit of supporting documentation to go with his stellar presentation.

See you all tonight~

Yea, the way they deploy that thing by letting the top roll, up indicates to me that the actual antenna weight has to be small and the size has to be minimal to let the top be "pushed" up by the air. No beam going on that thing. In fact, I'd be hard-pressed to even put a 2m halo on there. I think the only safe antenna is probably a 2m twin-lead j-pole in the "antenna pocket" of the tower.

**

From 4PM Friday to 10AM Sunday, Dec. 2-4, the ARRL will be holding its annual 160 Meter Contest. Now, before you start saying, "Hey, I don't have an antenna for 160" here's the challenge; be creative and get whatever you have to work in order to make some contacts. I'll explain more in a moment, but first read this:

http://www.arrl.org/news/reach-for-the-top-in-the-arrl-160-meter-contest

OK. Here are a couple ideas to try. If you have a dipole, trap or otherwise, without a balun, you can connect the coax center wire and shield together then connect them both to the "long wire" terminal of your antenna tuner. I have made a small adapter out of an SO-239 that ends in a single wire so all I have to do is screw the PL-259 into it to keep it simple. Your tuner's ground terminal should be connected to every possible type of ground you can think of, i.e. the furnace, the house electrical conduit, cold water pipe, the hot water heater, ground rod, multiple lengths of wire laying on the ground, etc. Another idea is to take about 125 feet of wire and run it through your trees as high as you can get it then connect it to the "long wire" terminal on your tuner. Same ground connections apply.

Think about giving 160 a try, you'll be amazed when you work California with a less than optimal antenna. It's actually easier than you think.

73, Don

872. Ta33jr elements as radials for Butternut?

Yahoo group: laterisersgroup
Date: 2011-11-23 03:11:00 UTC
From: Anthony
Topic: 867 Message: 872

I had a new idea... rather than try and hoist a beam high in the air, I was thinking of using my vertical, a Butternut HS6V. But the radials are a problem in that I only have a tiny patch of ground to put it, and it needs to be mowed. So, how about using the director & reflector from a tri-band beam as radials for the HS6V? and hoisting it about 12' up off the ground so nobody runs into the elements. I already think it's too few, especially for anything lower than 20m, but I am curious what you think?

Yea, lots of zones, lots of relays. It actually looks to be a pretty generic board used on multiple commercial hardware because of both he analog and digital zone inputs. It says commercial communications, but any two pieces of hardware that have to work together need to "communicate" so, as mentioned, if it's for a commercial HVAC system where zones have to communicate temperature back to the controller and then the controller adjust dampeners to affect temperature, this board would make sense. It doesn't look like a "communications" piece of gear as we know it.

Late Risers,

The Thanksgiving holiday prompted me to look at the history of our little band.

Scott, AE5SG, Clint, W5CMS and I got together at the first breakfast meeting in late September of 2010. Shortly after that the Late Risers Yahoo group was created and the first message was posted by Walter, AE5IT on Oct 3, 2010.

In a moment of creative inspiration Walter simply asked, "Somebody say something . . " And the rest is history.

By word of mouth, our breakfast crowd has grown to 32 official members and even more friends. There have been over 800 messages posted to our Yahoo group web page.

Happy Thanksgiving and Happy Anniversary Late Risers!

73,
Ron, AE5NO

Rusty,

Take a look at the Xtal Set Society at http://midnightscience.com/

They have a whole web site devoted to xtal set technology and they sell several inexpensive xtal radio kits.

Not sure how long he will be on St. Martin, but the good news is that he has been
on 17m the last two afternoons. I actually worked him yesterday, but he had a much better signal today. His pileup picked up a bit after being spotted several times. He even had a station in Namibia spot him. :)

He's not officially listed as participating in the CW contest this weekend, so it
might pay to watch 17M tomorrow afternoon to see if he's back.

Also of note, DX in the phone bands may be a bit lacking this weekend as it's CQ WWDX CW Contest weekend.

Rusty,

Glad you were able to work both stations.

Especially glad you snagged EA9IE. For those
not familiar, Ceuta/Melilla is a "country" for DXCC credit,
but they are actually two small cities/enclaves of Spain in North Africa.
They are surrounded by Morocco (and the Mediterranean of course).
They have been somewhat of a hot button issue between Spain and Morocco
for some time.

Cool thing about EA9IE is that he generally confirms QSOs in LOTW in a
couple of days.

Michael,
To further clarify-
Part of the confusion I'm sure is that he keeps telling everyone that he is on Tenerife Island, which is the largest of the 7 Canary Islands.
With his thick Russian accent, it can be a little tough to understand.
Still, I wager that his English is far better than our Russian. :)
Glad you were able to work him!

The following announcement was sent to the ARRL bulletin board.
Note that this NOT a CAP activity, and you need an Amateur Radio
License to participate.

Dec 3, 1700Z-2300Z, W9CAP
Special Event station W9CAP will be recognizing
the 70th Anniversary of the creation of Civil Air Patrol,
the USAF Auxiliary (1941-2011) by amateur radio
operators of the Illinois Wing CAP on 14.250, 7.255
and 18.125. Frequencies will be moving as band
conditions change. A commemorative QSL card will
be issued. Send your QSL card and SASE to:
ILWG CAP, ATTN: Capt. Ron Walerowicz,
P.O. Box 397, West Chicago, IL. 60186-0397

Lt Col James P. Weiland
Illinois Licensing Officer

Starting at 6pm Friday, Dec. 9th and running to 6pm Sunday, Dec. 11th (the weekend after this one) the 10M band will be hopping with DX as participants compete in the annual ARRL 10M Contest. The exchange will be simply a signal report and "Illinois." Both CW and Phone will be in play. 10M is open to all license classes so if you are a Technician, this is an ideal time to get on the air and see how well your station plays. Here is a link to the ARRL article:

http://www.arrl.org/news/the-arrl-10-meter-contest-get-on-while-the-bands-are-hot

The 10M band has been really hot lately and here's a chance to get lots of people on the band at the same time. You have a week and a half to get your station ready. Even one of those 25 watt 10M mobile rigs will be fun to use.

73, Don KK9H

This contest is a lot of fun. Last year with conditions being only mediocre,
I logged 135 contacts (37 states and 10 countries) using only a rotatable dipole up about 25 feet.
Conditions should be much better this year with good openings at times into most parts of the world.
You don't have to be a "serious" contester to have a lot of fun with this event. As he points out,
the exchange is very simple (59/ Texas), so I hope some folks will at least give it a try.

N1MM is very popular in the contesting community, though some of the big
guns prefer WINTEST, though it's not free.
I personally use General Logger, because it seems simpler, but there are
many free programs out there.

If you are looking for logging software just for the 10M contest, here
is a link to a website with contest specific programs:
http://www.n3fjp.com/

I see they charge a $6 registration fee. I have never tried these.

This is a pretty simple contest to log, so I would expect that most any
contest logging software would handle it okay.
The biggest thing is to flag dupes and track multipliers.

Whatever you decide to use, be sure to load it ahead of time and get
familiar with it. Nothing worse than fighting logging
software issues during a contest.

Ron,

Yes, it is part of a group. Apparently the 2 Argentine hams will join one Paraguayan ham to operate from ZP5X for the contest, which makes sense since Paraguay, while not truly rare, is probably 10 times rarer than Argentina. Also, the call of Mark, who you worked, is actually LU8EOT. If you look up ZP5X in qrz.com, it shows their pictures and calls.

945. Fwd: [NS9RC] An NSRC official simplex frequency adopted - 446.025

Yahoo group: laterisersgroup
Date: 2011-12-06 16:21:46 UTC
From: Darren Mende
Topic: 945 Message: 945

Hi All:

Please read the email below that was sent from my friends near Chicago.

This may be a good idea for the club, but instead of UHF, we could use 146.54, the frequency that is used for Wednesday's simplex net. This could be a readily available alternative to the club repeater for close-in operation.

Something to chew on until we meet again.

Thoughts?

Darren
K5QB
---------- Forwarded message ----------
From: "KK9H" <kk9h@...>
Date: Dec 6, 2011 9:14 AM
Subject: [NS9RC] An NSRC official simplex frequency adopted - 446.025
To: <NS9RC@yahoogroups.com>

**

A couple weeks ago when a group of us were working on the 440 repeater we had to locate people inside and outside the building to pull a cable through a couple walls. We used HTs to coordinate the work and had to select a simplex frequency. At that point, it dawned on me that it would have been handy if everyone already had a simplex channel that we could just switch to whenever needed. At last night's board meeting this was suggested and after some discussion, 446.025 simplex was chosen and adopted. This is an ARRL band plan simplex channel and basic no PL, carrier squelch operation is recommended.

So, NSRC members are encouraged to program this frequency into their radio memories right next to the NSRC repeaters. When we participate in civic events, go to hamfests, work on club projects or any time we just need a simplex frequency, let's have 446.025 preprogrammed and ready to go.

Now, the intent here is to have an easy to use, universally available frequency for NSRC members to easily switch to when needed, but the digital modes were also discussed. It was mentioned that there had recently been discussion on the D-Star and MotoTRBO reflectors that 446.100 and 446.075 respectively were being encouraged for universal simplex use. Since there are relatively few of these radios within the club, the primary focus is standard FM mode.

Anyone want to give 446.025 a try after Thursday's net?

73, Don KK9H

At the board meeting we were talking about Amateur Radio Balloon.

I have been following one all day. As it is crossing the Atlantic at 140
- 165 MPH.

http://aprs.fi/?call=K6RPT-11&mt=roadmap&z=11&timerange=3600&_s=ss_call

http://blog.aprs.fi/2011/12/k6rpt-11-aprs-balloon-approaching-north.html?showComment=1323812012686#c5226625283055788489

It is getting close to Europe, but the APRS frequency is different in
Europe, so they are trying to get Igate operators to temporarily switch
from 144.800 to 144.39 which the Balloon is using.

I caught an episode of this show last night. ZZZZZZZZZZZZZZZZZZZ.

While Tim Allen is a good actor, he is a better actor than he is a comedian. The writing is decidedly unfunny and his supporting cast is inept. Worse yet they are in the same time slot as NCIS!

I do not see a renewal in their future.

955. Used HF Radio

Yahoo group: laterisersgroup
Date: 2011-12-15 03:42:10 UTC
From: Kipton Moravec
Topic: 955 Message: 955

I am looking at a Used "Icom 718 Dusty w SM-8 desk microphone, and LDG auto Tuner AT700 for $625"

The ICOM 718 sells for $630 new on the internet, the SM-8 is about $80 used, and I can not find a AT700 but can find a AT7000 which sold for $185 new.

What do you think, is this a good deal?

Kip

956. Re: [laterisersgroup] Used HF Radio

Topic: 955 Message: 956

Kip,

I will offer you my 2 cents worth on this.

I know you have some familiarity with the 718
because the club has one. I also have one
and it was my first and only HF radio for about a year.
Frankly, it is a solid no frills HF rig, but after our discussion
on the 2M net tonight, I'm not sure it's the best radio
for your desired application. It's a little physically
large to put into a go kit, and has no built in tuner.

Having said that about the radio in general, I also
have some concerns about the specific one
you are considering. First, the listing mentions "dusty".
Does that mean it has been in a harsh environment?
If so, that could be a reliability issue going forward.

Second, while the SM-8 is a solid desk mic for the
radio, does it also come with the standard HM-36 hand mic,
which would be needed for mobile or with a go kit? If not,
you can find them for roughly $40. Also unknown is the vintage
of this radio and if it comes with the UT-106 DSP or not?
While the effectiveness of this DSP is considered to be
somewhat limited, it is now factory standard in all new 718's.
The mod though still costs $150 to retrofit older radios.
Something to factor into the price considerations.

If you were looking at a base only situation, I'd say this
might be a good option, but since you want the flexibility
to go mobile or portable, there are probably better radios
out there. Perhaps you should be looking for a physically
smaller radio, with a built in tuner.

And should you ultimately decide that the 718 is really
the radio you want, there seem to be quite a few that
go up for sale on a regular basis, so you need not sweat
too much about snagging this particular one.

Lastly, as I mentioned earlier tonight. If you are really serious,
I would be glad to loan you my 718 for a couple of weeks to try
out to see if it does what you want.

Here is what I want.

Something I can put into a GoKit.
One modern enough that it can be controlled by a PC.
Ability to do digital modes. I will probably do more digital modes than anything else. (I do not think I will be a big rag chewer.)

(I would like 6m but that is not a deal breaker.)

I do not care if it has 2m or 70cm, I have another radio for that.

I have $600 which I may be able to stretch into $700 if I talk to the wife right.

I have a old huge Drake manual tuner, and would like to get a small automatic tuner.

So I am guessing I need a used radio, but which one should I be looking for?

Topic: 955 Message: 958

Kip,

You should check to see if that 718 has the UT-106 DSP installed. You can easily tell because "DSP" appears on the screen when the unit is powered on. That used to be an optional feature but was made standard on later models. Do you know if the owner installed any of the optional SSB or CW filters? They cost about $100- $150, depending on the source. Either or both of these would make the rig more valuable, if those features are important to you.

I bought my 718 used about a year ago. It has the UT-106 but no mechanical filters. I paid $500 cash for it. It came with the hand mic. It had the MARS mod already done, which was the primary reason I bought it at the time. If you are not interested in that feature, I think you should be under $500

Since then, I used it extensively for digital modes, which have a high duty cycle and it performs well, tolerates heat and bouncing around. If the SWR runs over 2:1, the radio reduces power output proportionately; a plus for portable operations.

The IT-100 is the auto tuner that replaced the AT-7000. CheapHam.com has them for $149 new. You should be able pick one up used for $100.

If you are going for portable operation, I would personally prefer to use a headset and the hand mic. I have the MFJ-393k cost $69 new.

Subject: Re: [laterisersgroup] Used HF Radio

Here is what I want.

Something I can put into a GoKit.
One modern enough that it can be controlled by a PC.

Ability to do digital modes. I will probably do more digital modes than anything else. (I do not think I will be a big rag chewer.)

(I would like 6m but that is not a deal breaker.)

I do not care if it has 2m or 70cm, I have another radio for that.

I have $600 which I may be able to stretch into $700 if I talk to the wife right.

I have a old huge Drake manual tuner, and would like to get a small automatic tuner.

So I am guessing I need a used radio, but which one should I be looking for?

Kip

A little more history:

Last Thursday marked the 100th anniversary of the first successful trek to the South Pole by Norwegian explorer, Roald Amundsen. The last Antarctic station I worked was KC4USK on Knox Coast, Antartica During the "International Geophysical Year in 1958. KC4USK is QRT.

Get a piece of History tonight.

RR. Sunspot number is way down this week.

I was lucky. Happened to turn on the rig and he popped up on the DX Cluster. I was glad to get him in the log though. He's faded away now.

At least thanks to you, I had a shot. If propagation was a sure thing, this wouldn't be near so much fun!

Not only are the sunspots and SFI numbers down, but both A and K indices are 0. And while that's supposed to mean things are quiet, the bands have sure seemed noisy.

KC4AAA (Andy) promised he would be back on the air today. For those who might be interested, here is a snippet on how to work them from 2006, when they participated in ARRL Field Day.

"Experience has shown that the best opportunity for North and South American stations to contact KC4AAA appears around 2300 UTC on the Eastern Seaboard, moving westward with time until the window closes around 0400 UTC. Given South Pole's location right under the auroral oval, propagation can make South Pole intercontinental HF radio communications a challenge, so listen carefully! The primary operating frequency will be on or about 14.243 MHz. KC4AAA operators will monitor and exploit other bands, but 20 meter SSB will be the primary operating mode."

This was certainly true last night. I worked him at 0238 UTC right on 14.243.

977. RE: KC4AAA signal

Yahoo group: laterisersgroup
Date: 2011-12-20 13:54:25 UTC
From: AE5NO Ron
Topic: 977 Message: 977

I heard him around 8:45. I listened for a little while. He mentioned that he will be there at least two more days.

Propagation to North America opens up about 6 PM local time starting on the East coast and moving west.

So if you start listening around 8 PM local time you should be able to hear him better.

Because of the Pole's unique position with respect to the ionosphere and the earth's magnetic field, propagation can be erratic. I had several hams here in Houston report they cannot hear him, when I can easily. So keep trying.

Ron, are you still able to hear him? I just hear noise and some faint talk. I was just wondering if he is transmitting in the past 35 minutes.

985. 2 Nights Before Christmas

Yahoo group: laterisersgroup
Date: 2011-12-24 03:42:22 UTC
From: AE5NO Ron
Topic: 985 Message: 985

2 Nights Before Christmas

Twas 2 nights before Christmas and up at the Pole,

Santa was checkin' his radio gear for the big show.

His APRS was working just fine,

So the boys at NORAD could track him down the line.

His new HF rig was tuned up on 20.

He knew that 100 watts would be plenty.

No CW on this flight he grumbled out loud.

I have to be able to fly through the clouds.

So sideband it is for the big night tomorrow.

I hope those code guys won't be too full of sorrow.

The two meter rig was already encoded,

with every repeater that could be uploaded.

They'll know Iwhen I'm near and won't be surprised,

and make sure the kids have all closed their eyes.

He stopped for a moment then gave a big start,

when he suddenly realized he was missing a part.

Of course! He exclaimed, its my laptop PC!

I won't get far without it on my knee.

Its got my log and my list and my flight plan too,

though I always have Rudolph to guide me through.

He pulled out his wallet and made sure to check,

to be sure his FCC license was there for the trek.

Well, it looks like I'm ready, they heard him declare,

I'll be single op unassisted for the whole affair.

I better get some rest now before the big night

So that everything will work out alright.

And they heard him exclaim as walked off to bed,

CQ, CQ, CQ . . .

Merry Christmas Y'all

Thanks Ron, I really appreciate that! (Guess you were talking to Scott.)

I agree with you and do consider it my most major accomplishment so far in my short time in ham radio.
To be honest with you, when I look at my simple wire antenna, I have to marvel at how it's even possible.

I know we hit the (100) threshold almost simultaneously, so I'm sure you'll get your certificate very soon. Fortunately for me, I was able to get 101 countries confirmed through LOTW, so I didn't have to send any physical cards for checking. That shortened processing time down to just one day. Please let me know when you receive your certificate so that I may publicly congratulate you as well.

I also wish you good DX, but it seems rather unnecessary of late, as all the DX seems to be rolling into Houston and skipping right over Dallas. :-)
I could barely hear the guy in Oman this morning.

From: AE5NO Ron
Topic: 720 Message: 992

Thanks Stan.

Yes we hit it about the same time but I only had 73 confirmed by LOTW ansd 27 paper. I had to get a meeting with the local DXCC Card Checker here. That took me a couple weeks. He said he sent the paperwork in about Dec. 10th, so I am looking forwward to receiving mine shortly.

Can you believe that there is only one DXCC Card Checker in Houston? After him, the next closest guy is in San Antonio!

Sorry anbout Oman. Hope you worked him anyway. My dipole is up in a really tall tree. Aside from the fact that it is completey invisible, it is also about 45 feet up. The orientation is really good for Europe and the middle east and for the southwest pacific in the other direction. Don't have a clue about KC4AAA. Africa is a crap shoot on the dipole. So is the western pacific.

Good Luck and Happy New year.

Topic: 720 Message: 994

Ron,

Sorry the paper QSL's delayed you so much. If Houston is so limited, imagine if you were out in the country, the card checking thing would be a serious pain!
Of course you could always send them to the ARRL directly. Personally, I was so close with LOTW when I hit 100 that I just decided to wait to hit 100 there.
Good decision for me I think. Still, the receipt of the actual certificate is merely a detail. When you finally score number 100, that is the shining moment.
You got it , we know it and we congratulate you! It is a pretty cool certificate to receive though and I know you will enjoy it!

My OCF dipole is only up about 30 feet and it's in a horizontal L configuration to fit in my yard, so I have yet to figure out exactly what pattern it has.
Southern Europe is really good, but Scandinavia not so much. Africa is okay and so is Japan and Australia. Go figure. I think the South Pole was just a crap shoot from here and I lost. No reason at all to be sorry about Oman - thanks for the spot. We don't control propagation, and can only
report opportunities. Maybe he was louder earlier on, but by the time I got there, he was pretty weak and had a big pileup. Conditions have not been that wonderful lately, despite the numbers arguing otherwise.
Bands have been pretty noisy. Still the solar cycle is on the rise, and that is
a very good thing! I think my next challenge (for 2012) will be DXCC on 10 meters. I am already over 70 countries.

Good Luck, Good DX, and Happy New Year!

Yes we hit it about the same time but I only had 73 confirmed by LOTW ansd 27 paper. I had to get a meeting with the local DXCC Card Checker here. That took me a couple weeks. He said he sent the paperwork in about Dec. 10th, so I am looking forwward to receiving mine shortly.

Can you believe that there is only one DXCC Card Checker in Houston? After him, the next closest guy is in San Antonio!

Sorry anbout Oman. Hope you worked him anyway. My dipole is up in a really tall tree. Aside from the fact that it is completey invisible, it is also about 45 feet up. The orientation is really good for Europe and the middle east and for the southwest pacific in the other direction. Don't have a clue about KC4AAA. Africa is a crap shoot on the dipole. So is the western pacific.

Good Luck and Happy New year.

From: Kipton Moravec
Topic: 1015 Message: 1015

Do we know of someone that can give them a hand with a Digital presentation for their Tech Net?

Kip

-------- Forwarded Message --------
From: K Hall <ke5zcm@...>
To: KiptonMoravec <kip@...>
Cc: ke5zcm@...
Subject: Open invitation to speak at Saturday Night Tech Net
Date: Mon, 9 Jan 2012 18:47:05 -0800 (PST)

Hi Kip,

Nice to run into you! I'm following up on our conversation this evening. If you-- or any other hams you know -- would be able to visit the Saturday Tech Net (146.88 MHz / PL 110.9), which is every Saturday at 19:00, this is an open invitation to you.

When I saw you, digital mode was on my mind. Several hams have mentioned, on the air, an interest in learning something about digital. A visit or presentation could range from 3 minutes to 20 minutes, whatever someone feels comfortable with. It could be an overview, or could focus on a particular digital mode such as PSK31 or RTTY, or any digital mode at all.

Though digital was on my mind, however, this invitation covers any topic of interest to hams. Please keep us in mind.

Here's a little bit about our net. Tech Net now has 8 NCS stations, and three substitutes. We usually start at 19:00 local time, and run anywhere from an hour to an hour and twenty minutes. Our check-ins rise and fall with the seasons but we're probably averaging around 20 to 25 right now. I'd be happy to send the current rotation schedule so any interested ham could pick the evening most convenient and work with that NCS station to schedule a time that's suitable.

Our net has had an estimated 225+ unique callsigns check-in over the last year and 9 months. Hams from many surrounding cities and counties check-in, and also mention at HamCom and by email that they can't check-in, but do listen, including hams from Collin County. We serve an audience whose size we do not know, but they cover a broad footprint of the DFW area. Many probably don't have a readily accessible amateur radio club, or want more than a monthly gathering.

KPARK was the first ham club I joined. Charlie Taylor, K5USS, and Carl, AD5NA, were the first two hams who helped me get on the air, first

loaning me a 2m Icom, and later arriving in Tony's parking lot for breakfast so they could use Charlie's crimping tool to get my coax ready! I am swamped right now and don't make it to Tony's or to club meetings. But I do volunteer to help with the Plano Balloon Fest and other public service events every time I can. If there ever is an occasion when help is needed (heaven forbid), hams from surrounding counties will likely find themselves lending a hand. So cross-fertilization of ideas and getting to meet each other is important.

Keep us in mind! Any topic that interests you and your fellows will interest hams here as well.

73s, Kip,

Katherine

1024. CQ Panama Canal

Yahoo group: laterisersgroup
Date: 2012-01-15 18:05:22 UTC
From: AE5NO Ron
Topic: 1024 Message: 1024

"CQ, CQ, Panama Canal".

What? Is he kidding? Is that some kind of special event station?

You might hear some strange QSO's on the air this year as hams work to earn the DXCC Diamond Challenge, commemorating the 75th anniversary of the DXCC award. To earn the award you have to contact 100 or more of the countries that were on the first DXCC list 75 years ago.

Many of the countries from 1937 no longer in exist. That creates some interesting challenges when pursuing this award. The ARRL has a list of current entities to represent former countries from 1937 on their website. Work Ethiopia to get credit for Abyssinia. For the former Belgian Congo, you can work Democratic Republic of the Congo (9Q), Burundi (9U) or Rwanda (9X). How easy is that! The city of Kaliningrad (RF2), which is its own DXCC entity today but politically part of Russia, gives you credit for 1937 Germany, when it was known as Konigsberg. There are some oddities in the list.

My personal favorite is the Canal Zone (KZ5), which of course is now part of Panama. To qualify for the CZ credit, you have to work an Panamanian (HP) station that is within 8 kilometers of the canal.

How would that work? Let's You might try . . ."CQ, CQ, Panama Canal within 8 KM".. Or "CQ HP <= 8KM de the Canal".Try that on CW or RTTY!

This is one recent phone contact

ME: QRZ, QRZ HP only.

[I'm thinking. Maybe I'll get lucky.]

HP Station: HI OM UR 59 here, Name is Ralf. BTU.

[Hmm.So far, so good.]

ME: Thanks for coming back to me Ralf. What is your exact QTH? Are you within 8 KM of the canal? Over

HP Ralf: What canal? UR 59 hr too. Over.

[I'm thinking maybe Ralf is really in Honduras(HR) or he needs a map.]

ME: The Panama Canal, You know, the big ditch where all the boats go. BTU Ralf

HP Ralf: Oh that canal. I don't know. I haven't looked lately. Does that matter? BTW, WX is blah, blah, blah. Rig here is . . .blah, blah, blah. Antenna is blah, blah, blah. Do you want my Grid Square? How about you?

Over.

(Obviously Ralf missed the e-mail. Let's cut to the chase Ralf]

ME: That's great Ralf. Yes its for a new DXCC award.

HP Ralf: Man, I never heard of that one! That's some crazy award. I don't do kilometers, how many feet is that?

[ARGHH! OK, maybe we are getting somewhere at last.]

ME: Its about 26,200 feet. Over

HP Ralf: Sorry OM, there was some bad QRM that time. A lot of guys are calling me like I'm some rare DX all of a sudden. Say again, how many feet is that?

[Panic is setting in.]

ME: 26,200. 26 Two zero zero.

HP Ralf: That is a lot of feet dude. Don't think I have a tape measure that long. Do you mean from the center of the canal?

[Getting desperate.]

ME: Can you just estimate?

HP Ralf You mean guess? I guess so.

ME: Cool, Good enough for me. Got you in the log. Thanks Ralf. 73

You don't need confirmations, its on the honor system. You can find the rules at

From: Stan
Topic: 1024 Message: 1030

Interesting stuff Ron, Thanks! I hadn't paid any attention to this.

I guess I also have mixed feelings about it. Today the pileups for essentially routine DX were larger than usual and this award was mentioned. Guess it may be tougher to work DX for a bit, though I have to think that more activity is overall a good thing..

I do think the 8km thing with Panama is a bit ridiculous. Unless the ARRL is publishing a list of stations that close, it's going to be almost unverifiable. Guess if I had a Panama contact that seemed unaware of the canal, I'd be skeptical that he lived within 5 miles. Also, good luck working that into any kind of contest contact.

On the plus side, if solar conditions hold, the basic award might be achievable in a single weekend, say during the CQ WPX or WWDX contests.

Today I worked my first DX of the year. Only 96 "countries" to go!

1042. Saturday - North American QSO Party - SSB

Yahoo group: laterisersgroup
Date: 2012-01-16 16:50:34 UTC
From: Stan
Topic: 1042 Message: 1042

For anyone interested in chasing, or perhaps even completing their WAS,
this Saturday presents a great opportunity.
This is primarily a North American contest and there will be folks
operating from all 50 states as well as all of Canada.
The contest runs from noon CST until midnight and covers all HF bands
except 12, 17, and of course 60meters.
The exchange is simple, just your name and state. One of the unique
things about NAQP is that this is a low power contest.
Maximum power allowed is 100 watts, so there are no "big guns" to
compete with. (It really does help to level the playing field.)
Remember too, you don't have to be a serious contester to participate
and get that elusive state in your log. (Delaware was my last one to snag)

Personally, I will be curious to see how close I can come to WAS in a
day using 100 watts and a dipole.
I hope to see some of you on the bands!

Date: 2012-01-16 17:25:02 UTC
From: Greg Evans
Topic: 1042 Message: 1044

Thanks Stan! I will put it on the calendar.
To: laterisersgroup@yahoogroups.com
From: stan@...
Date: Mon, 16 Jan 2012 10:50:34 -0600
Subject: [laterisersgroup] Saturday - North American QSO Party - SSB

For anyone interested in
chasing, or perhaps even completing their WAS, this Saturday presents a
great opportunity.

This is primarily a North American contest and there will be folks
operating from all 50 states as well as all of Canada.

The contest runs from noon CST until midnight and covers all HF bands
except 12, 17, and of course 60meters.

The exchange is simple, just your name and state. One of the unique
things about NAQP is that this is a low power contest.

Maximum power allowed is 100 watts, so there are no "big guns" to
compete with. (It really does help to level the playing field.)

Remember too, you don't have to be a serious contester to participate
and get that elusive state in your log. (Delaware was my last one to
snag)

Personally, I will be curious to see how close I can come to WAS in a
day using 100 watts and a dipole.

I hope to see some of you on the bands!

73,

Stan

Michael,

Take heart in knowing that you did get through to him since he copied
your call correctly.

However, for the purpose of paper chasing and QSLing, Ron is correct.

1049. New Ham Store

Yahoo group: laterisersgroup
Date: 2012-01-21 23:05:53 UTC
From: AE5NO Ron
Topic: 1049 Message: 1049

Ooh! Oooh! A new ham store opened today in Houston. Houston Amateur Radio Supply. It's the only full line store in the Houston Area. www.houstonamateurradiosupply.com <http://www.houstonamateurradiosupply.com/> .

The store has been around awhile but they have new owners, new staff and a new look. I stopped in at the grand opening this morning and the place was packed. I hope they make it. They do sales, service and also sell used gear. It will be great to have a local resource for the big stuff.

1055. Radio working

Yahoo group: laterisersgroup
Date: 2012-01-23 01:34:02 UTC
From: Kipton Moravec
Topic: 1055 Message: 1055

At PARK in the Park today with much help from Scott AE5SG and Dan KE5LHC, we got my ICOM 718 working with the LDG Z-100Plus Autotuner.

Since I bought them used as a set from a guy, with the interface wires, you would think that the radio would already be configured to work with it. -- Nope.

Thanks for the help guys. You made my day!

Also thanks Darren for testing the ground wave from the park to your house on 20 Meters.

Kip

Glad to hear you got it going, Kip. Sorry I missed you at the park, but I had to get the little ladies back to the house.

I am also pleasantly surprised at how well 20M ground wave worked for us. We each had 57-59 sigs with QSB, so we know that 20M is a viable daytime option for the Plano area.

Have a great week and we'll see y'all on Wednesday.

Okay, I'll throw this out for discussion.

Isn't QSB unusual for a path of such short distance? QSB typically
indicates some sort of sky wave involvement.
Were you guys really working long path?? :-)

1059. My North American QSO Party Results

Yahoo group: laterisersgroup
Date: 2012-01-23 05:23:44 UTC
From: Stan
Topic: 1059 Message: 1059

I had posted last week that NAQP would be a good opportunity to work on WAS and that I was going to see how close I
could come to doing it in the12 hours of this contest. Not sure if anyone else was able to participate, but
in fairness, I felt I should share my results to if nothing else, maybe encourage folks to give it a try.

Conditions were not as good as expected, but the bands were still pretty rocking.
I also had the very special privilege of working 2 young Techs (age 11) on 10M (one in RI and one in GA) having an absolute blast
with this contest, because 10M was very open. They were both doing a great job.

Anyway, in the course of 9 hours, I managed to work 34 states (including Hawaii), 5 Canadian Provinces, plus Puerto Rico
This was all running 100 watts with a wire multiband antenna (10-80M), and a homebrew rotatable 10M dipole, both at about 30 feet.
All the while ignoring interesting DX like a VP8 (Falkland Islands) on 10M, a ZS3 (South Africa) on 40M and a DL3 (Germany) on 80M.
Ouch! :-)

From: AE5NO Ron
Topic: 1063 Message: 1063

http://www.arrl.org/news/logbook-of-the-world-to-now-support-cq-awards

Check out the article from ARRL. Beginning April 1st, we will be able to apply LOTW credits to CQ sponsored awards like WPX. The two CQ awards I am tracking is WPX and WAZ. Now we just need to get RSGB on the stick and allow credit for IOTA contacts through LOTW.

From: Stan
Topic: 1063 Message: 1064

The best thing about this is that CQ already accepted eQSL
confirmations, so this should effectively allow us to combine
confirmations from both methods for CQ awards.
It isn't exactly cheap though. I haven't been tracking any CQ awards,
but I may have to start.

Yes, it would be nice if the RSGB would get on board with LOTW and also
for the ARRL to accept eQSL, but I think there are a lot of political and
NIH (not invented here) issues in the way.

1069. HF ragchew, anyone?

Yahoo group: laterisersgroup
Date: 2012-01-26 22:17:30 UTC
From: Michael Payne
Topic: 1069 Message: 1069

Hey guys, is anyone interested in trying to get together on HF and have a time and a day and frequency to ragchew, test equipment, etc, with others? Scott and I were talking this morning and thought we might see if there was a chance of talking together on HF, to find out if we could do it in the immediate area. We might not be able to because of the closeness of everyone, but I'd like to try to see if we could. No telling who might join in! If you are interested in trying to do this, let Scott or me know. Any suggestions will be welcome and appreciated. Anyone else doing this in the area? We could use 2m to start with to test and coordinate frequencies.

73,

Michael KE5TJL

We could always start out on the Wednesday 2 meter net and decide from there where to play on HF.

With all due respect, if we start this out on the 2 meter Wednesday night roundtable net, it is likely to very quickly go the way with the band changing moves we started out with last year and die.
Alternatively, if successful, it would basically cannibalize the 2 meter roundtable, which is not all that robust as it is. I don't really care what we decide, but if serious, we need to pick a band,
choose a frequency and it needs to be held on other than Wednesday nights. I think 3.803 would likely be available for any night, but I'm fine with other suggestions.

I don't want to take away from the GGN on Thursday and hope that GNN net continues forever. We have Monday, Friday and Saturday open, and I agree that Wednesday is not good for me with other conflicts happening that night. I would like to see this happen on at least a twice a week occasion. We all need to voice our opinions on band and a night. I was thinking on 10m because Damon is limited to 10, but if there is an overwhelming choice for a different band that works, I'm all for it (sorry Damon). Stan suggests that we try 80 meter. Would someone test with me to see what bands work and see if it is possible to have a net? I'm pretty new at this, so any expertise would be greatly appreciated!

Just so everyone knows, my suggestion of using 80m was mostly tongue and cheek. Any band is okay with me and we probably need to test to see what will work best.

From: AE5NO Ron
Topic: 1077 Message: 1077

Late Risers,

I finally heard yesterday by mail that I was 1 country short on my DXCC application. I submitted a paper card that I had already claimed LOTW credit for and did not catch it. My bad. I e-mailed ARRL and asked that they add my latest LOTW credits to the application, which they immediately did and congratulated me on the award.

BTW, they were great to work with. Should have the wallpaper in a week.

Finally got it after 58 years! Actually I started from scratch with my new call in 2009 and did it in 2 ½ yrs but it sounds better the other way :-)

1080. St. Helena ZD7JC

Yahoo group: laterisersgroup
Date: 2012-01-27 16:43:33 UTC
From: AE5NO Ron
Topic: 1080 Message: 1080

I love history. I guess that's why I like working DX. Just about every contact I make seems to have a historical element to it.

Yesterday, I received a paper card from ZD7JC on St. Helena Island. St. Helena is a rock in the South Atlantic Ocean It is famous as Napoleon's final place of exile. He died there after only six years. He lived in a place called Longwood House. It was sparse compared to French palaces but it was no Bastille. He had the freedom of the island just as long as he didn't decide to go fishing!

The British were so paranoid that he might escape again, they garrisoned extra troops on the island and British naval ships constantly patrolled around the island. He died in 1821.

In an interesting note, the French under Napoleon III (the nephew of Napoleon Bonaparte), gained possession of Longwood House and the land around it. A French flag flies over it today, even though St. Helena is still a British Overseas Territory.

OK, school's out. LOL

I love history. I guess that’s why I like working DX. Just about every contact I make seems to have a historical element to it.

Yesterday, I received a paper card from ZD7JC on St. Helena Island. St. Helena is a rock in the South Atlantic Ocean It is famous as Napoleon’s final place of exile. He died there after only six years. He lived in a place called Longwood House. It was sparse compared to French palaces but it was no Bastille. He had the freedom of the island just as long as he didn’t decide to go fishing!

The British were so paranoid that he might escape again, they garrisoned extra troops on the island and British naval ships constantly patrolled around the island. He died in 1821.

In an interesting note, the French under Napoleon III (the nephew of Napoleon Bonaparte), gained possession of Longwood House and the land around it. A French flag flies over it today, even though St. Helena is still a British Overseas Territory.

OK, school’s out. LOL

Late Risers,

I finally heard yesterday by mail that I was 1 country short on my DXCC application. I submitted a paper card that I had already claimed LOTW credit for and did not catch it. My bad. I e-mailed ARRL and asked that they add my latest LOTW credits to the application, which they immediately did and congratulated me on the award.

BTW, they were great to work with. Should have the wallpaper in a week.

Finally got it after 58 years! Actually I started from scratch with my new call in 2009 and did it in 2 ½ yrs but it sounds better the other way J

Michael,

I have two Tigertronics Signalink USB's They work great. Easy to set up. Been using them for the last 2 years.

I bought mine from DX Engineering. They sell the cables separately but the total price comes out the same. They also sell the jumper modules for the most popular radios so you don't have to solder them.

The Signalinks do not do Rig Control, only function as a sound card for digital modes. If you want rig control too, you might also consider the West Mountain Radio Rigblaster

Not familiar with the MFJ product.

I've eliminated the MFJ product because it has software issues with WindowsXP, which is what I use. Can you connect your Signalink to use the speaker output on a transceiver, and USB to the computer? I am trying to keep from removing and reattaching the mic/mic cable every time I want to use phone or the Signalink.

The cable from the Signalink plugs into the accessory port on the back of the radio, so you do not have to unplug anything. The cable and type of connector varies depending on your model radio so be sure you get the one that matches your radio. If you are unsure , just call or e-mail Tigertronics. I hear their tech support is very good although I never had to use it so far.

1107. Items for sale

Yahoo group: laterisersgroup
Date: 2012-02-02 04:35:31 UTC
From: Andy
Topic: 1107 Message: 1107

Guys,

I'm trying to scale back on my ham gear. I have a partial list of items for sale here (more to come later). The prices are pretty firm on most items, if I have to put them on QRZ or eHam I'll have to raise the prices for all the low ball offers... I have HQ pictures if anyone I can provide if anyone is interested in a specific item. Contact me for details.

Andy WA5UP

Icom 756 Pro II $1,600.00
Icom IC-745 $400.00
Kenwood TS-2000 w/ Blue LCD Backlight + SP23 External Speaker (Has issue with ACCY audio out) $1,100.00
Kenwood TS-850 $800.00
MC-60 $120.00
SBE Desk Mic Wired for Icom Rigs (round or RJ-45) $50.00
Icom 706 MIIG + SSB Filter $800.00
Kenwood TM-D700A + GPS $450.00
Amp Supply Co LK-500ZA Legal Limit HF Amplifier (Needs 220VAC) $900.00
Palstar AT2L High Power HF Tuner $400.00
Mosley TA-53 + 40-6 HF Beam + Balun (Like New, Paid $1500) $800.00
Rohn 25G 120' Tower + Base Plate - Excellent Condition $1,000.00
Yaesu GL-450 Rotor $200.00
Alliance HD-73 Rotor $200.00
Radio Shack HTX-420 Dual Band HT $100.00
MFJ 259 HF Antenna Analyzer $150.00
SignaLink USB Audio Interface $85.00

1114. North Texas Nets

Yahoo group: laterisersgroup
Date: 2012-02-07 13:49:26 UTC
From: Ted Gurley
Topic: 1114 Message: 1114

Folks,

I would like to compile a TV Guide like listing of North Texas Nets HF, VHF, and UHF. The purpose is to have a resource to give to new hams, have a list we can use to publicize events, and just to have content to build our site traffic.

By posting original content like this to our PARK website we will increase the number of inbound links and consequently increase our ranking on web searches. This could enable us to monetize the site by getting some ad revenue for the Club.

Below is an idea of the format. Take a minute and send me some nets and I will start the list.

TG

Day CST Week of Month Frequency Repeater Net/Comments

Sunday 8pm 2nd 145.210 Carrollton ARES Training Net
Sunday 8pm 2nd 146.740 McKinney ARC
Sunday 7pm 3rd 146.880 W5FC DARC Meeting on the Air
Sunday 8pm 3rd 146.880 W5FC Dallas RACES Directed Net
Sunday 9pm 3rd 146.740 MARC Collin County ARES Open Net

1122. I need your help!

Yahoo group: laterisersgroup
Date: 2012-02-11 03:04:18 UTC
From: Michael Payne
Topic: 1122 Message: 1122

Guys,

I want to ask a big favor of everyone. There is a woman that is in desperate need of help. Her husband left her and the 4 children several months ago and hasn't tried to communicate to her. He just left. One of the children doesn't even have a coat for this cold weather that is coming. The mother works a few hours at Walmart 3 days a week. They are 3 months in arrears on the house payment and just made a payment on her car. The children haven't had a Christmas this past December because they had no money. They are all in need of clothing, but I don't know their sizes. Our church is working with her and the children to help end meet.

I'm asking everyone to bring canned goods if they can, and any gifts of money would would be greatly appreciated. The gifts are tax deductible and our church can give you a tax credit receipt. The church will take the gifts and canned goods and give them to the family. I know this is short notice, but they are hurting in every way. If you can't contribute, that is perfectly understandable. I would like to gather up your gifts between this Saturday at breakfast and the next breakfast on Saturday, the 17th.

Respectfully yours,

Michael KE5TJL

P.S.

Please pass this on to others if you can. Thanks.

The BLT-28 which is trying to go to China launched today

The last APRS Report was at 6:00 p.m. at 45763 ft
http://aprs.fi/?call=kt5tk-11&mt=roadmap&z=11&timerange=3600&_s=ss_call

It looks like it it took off at about 3:23 p.m. only 23 minutes behind schedule.

It has a variable frequency APRS transmitter. So either they are too far from land to hit a digipeater, or they screwed up on the frequency change. So I am guessing everybody is waiting for it to get into range of a digipeater and i-gate again.

Track KT5TK-11.

1125. Payroll Tax Releif Bill

Yahoo group: laterisersgroup
Date: 2012-02-18 05:48:48 UTC
From: AE5NO Ron
Topic: 1125 Message: 1125

Would you believe it? The Payroll Tax Relief bill just passed by Congress contains an amendment that could be beneficial to Amateur Radio. It is very interesting, especially the part about impediments to the Amateur Radio Service.

Section 6414 of the act reads as follows:

Section 6414: Study on Emergency Communications by Amateur Radio and Impediments to Amateur Radio Communications

* (a) In General: Not later than 180 days after the date of the enactment of this Act, the Commission [FCC], in consultation with the Office of Emergency Communications in the Department of Homeland Security, shall:

* (1) complete a study on the uses and capabilities of Amateur Radio Service communications in emergencies and disaster relief; and
* (2) submit to the Committee on Energy and Commerce of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate a report on the findings of such study.

* (b) Contents: The study required by subsection (a) shall include:

* (1)(A) a review of the importance of emergency Amateur Radio Service communications relating to disasters, severe weather, and other threats to lives and property in the United States; and

* (B) recommendations for:

* (i) enhancements in the voluntary deployment of Amateur Radio operators in disaster and emergency communications and disaster relief efforts; and
* (ii) improved integration of Amateur Radio operators in the planning and furtherance of initiatives of the Federal Government; and

* (2)(A) an identification of impediments to enhanced Amateur Radio Service communications, such as the effects of unreasonable or unnecessary private land use restrictions on residential antenna installations; and

* (B) recommendations regarding the removal of such impediments.

* (c) Expertise: In conducting the study required by subsection (a), the Commission shall use the expertise of stakeholder entities and organizations, including the Amateur Radio, emergency response, and disaster communications communities.

1128. Balloon Launch this morning From Lake Lavon.

Yahoo group: laterisersgroup
Date: 2012-02-19 15:52:36 UTC
From: Kipton Moravec
Topic: 1128 Message: 1128

There was a Amateur Radio High Altitude Balloon Launch this morning from Lavon North Airport. It was scheduled to launch at 9:00 and I got there at 8:50 and it had already launched.

It has an APRS tracker KG5CA-11. Chuck Goldsmith is the ham that did it and there were maybe 8 people out there. He is shooting for 120,000 feet, but it appears to be going up to slow. They have no plans to follow it as they predicted ti would go 250 to 400 miles. At the rate of its ascendtion it is going to go much farther than that.

It started South and is now heading east.

You can track it on line.
http://aprs.fi/?call= KG5CA-11

I invited Chuck to visit PARK on Monday.

I also found that that airport is probably the closest place we can launch from as we have to be 35 miles from DFW Airport, according to Chuck.

It is on it's way down. It only got to about 72,000 feet, but it is
coming down pretty slowly.

It is on it's way down. It only got to about 72,000 feet, but it is coming down pretty slowly.

N0D - Doomsday! The end of the world according to the Mayan Calendar.
http://www.december212012.com/index.shtml

I'm planning for a three day event, 12/20, 12/21 and 12/22.

12/20 - The Doomsday Eve celebration.

12/21 - Doomsday - We'll be on the air as long as we can hold it together!

12/22 - The day after - that's a little iffy right now!

QSL could be available but don't request one unless Doomsday is canceled.

After all it is a hobby! Let's have fun with it.

Wow! Cool idea! I'd sure like to help operate, but I'll be busy
getting my final prepper supplies to the secret location. :-)
You might also want to consider automatic upload to eQSL. That way
folks could get their confirmations before the end.

The website is the easy part. As someone previously suggested, once you have the call sign, eqsl.cc is the easy way to go because multiple people can upload the qso to them automatically. And if the caller wants a card, they just have to download and print it. Saves A LOT of grief. Although I just got another QSO request in the mail last week... The second biggest thing I learned - was to request spots (during the QSO). That's the only way you will get any major, major traffic.

1146. Doomsday - The End of the World

Yahoo group: laterisersgroup
Date: 2012-03-01 15:36:23 UTC
From: AE5NO Ron
Topic: 1146 Message: 1146

Its Official, I just received authority for Special Event call sign, N0D.

Very Special Event Station N0D, celebrating Doomsday - The End of the World will be on the air from Dec 20-22 2012. As you may know, according to the ancient Mayan calendar the world will end on December 21,2012.

N0D will commemorate (if that is the right word) and celebrate the event. Our operation may be cut short if Doomsday really happens!

In the event it does, N0D may be your very last QSO!

This is a three phase event:
12/20 - Say goodbye celebration.
12/21 - The big day! We'll be on the air as long as we can hold it together!
12/22 - The day after; that's a little iffy right now!

Unfortunately, we may not be able to send you a QSL, unless Doomsday is canceled.

More details to follow as we approach Doomsday. BTW, if you are not busy that day, drop me an e-mail if you would like to help with the N0D project. Remember, this may be your last chance!

1149. P.A.R.K. meeting & door prize

Yahoo group: laterisersgroup
Date: 2012-03-21 20:57:32 UTC
From: Robert Speckmann
Topic: 1149 Message: 1149

I just wanted to drop a quick thank you note about the March P.A.R.K. meeting (I don't know if there's a PARK reflector, so I'm sending it here, since I think many of the PARK members are copied on this one).

Thanks Kip for another great meeting, and thanks Bill for bringing in Robby to talk about SDR. Great stuff, very informative, very helpful to me (at my level of knowledge).

Oh yea, ... Thanks for drawing my name out of the hat as the WINNER of the Ensemble RxTX SDR kit.

And thanks to everyone who didn't show up, improving my chances to win :-)

I should be done with it long before field day, so it should be usable then, if desired, (unless I'm out of town, then it may be with me).

I'm planning on building the 40m, 30m, 20m option. I'm starting the build today! (although it will be an off & on project, as time permits).

1.. 160m - covering the 160m band
2.. 80m, 40m - covering the 80 and 40 meter bands
3.. 40m, 30m, 20m - covering the 40 through 20 meter bands (added 7/12/2010)
4.. 30m, 20m, 17m - covering the 30, 20 and 17 meter bands
5.. 15m, 12m, 10m - covering the 15, 12, and 10 meter bands
Thanks again & best regards,
Robert

1157. Vanity Call Sign K5HM

Yahoo group: laterisersgroup
Date: 2012-03-28 05:27:33 UTC
From: AE5NO Ron
Topic: 1157 Message: 1157

Greetings!

The last time I got a message like that it was from the draft board. This was from the FCC and no, it was not a pink ticket.

My application for a vanity call sign was granted today. My new call sign is K5HM.

I first tried to get my old call sign, K2KMA but someone in California had grabbed it. So I decided, if I was going to get a new call sign, it should have the characteristics I wanted.

I deliberately selected K5HM to have as few phonetic syllables as possible from the available choices at the time. I did not want to wait more than 6 months for a better call sign to come out of the two year wait.

I wanted something that had a good CW weight too, with as few dah's as practical. K5HM has only two dah's at the beginning and end of the call sign. I have been wanting to get proficient in CW again, so I guess I can't procrastinate any longer. Well, I don't even own a key, so I guess that will have to wait a little while.

Did you ever think about all the other things that have to change when your call sign changes? It will take me a while to make all these: QRZ, Club memberships, LOTW, QSL's, subscriptions. Hats, name badges, e-mail, License Plate, Software configurations . . .etc. All that thinking makes my brain hurt!

See you on the bands!

73,
Ron, K5HM, ex-AE5NO

Hey Ron,

Congrats on the new shorter call! I well understand all the changes required .
I've gone through that twice in the past 3 years. Honestly, it's not quite as bad as it seems.
If you work at it, In a couple of days you should have the worst behind you.
As for the new call, I can almost see a guy holding his chin going. K5-hmmmm.
I bet you find it better in DX pileups. :-)

I deliberately selected K5HM to have as few phonetic syllables as possible from the available choices at the time. I did not want to wait more than 6 months for a better call sign to come out of the two year wait.

I wanted something that had a good CW weight too, with as few dah's as practical. K5HM has only two dah's at the beginning and end of the call sign. I have been wanting to get proficient in CW again, so I guess I can't procrastinate any longer. Well, I don't even own a key, so I guess that will have to wait a little while.

Did you ever think about all the other things that have to change when your call sign changes? It will take me a while to make all these: QRZ, Club memberships, LOTW, QSL's, subscriptions. Hats, name badges, e-mail, License Plate, Software configurations . . .etc. All that thinking makes my brain hurt!

See you on the bands!

73,
Ron, K5HM, ex-AE5NO

1x2 calls are pretty tough to come by, especially in 5 land. Do you know how many people put in for the call?
Maybe you won the FCC Lottery, though personally I'd rather win the Powerball.

Nah, forget PowerBall. Ron, you want to play the MegaMillions lottery. Why, you might ask. How Much (HM) is it? The MegaMillions jackpot for Friday is five Hundred Million (5HM)! Holy Mackerel! (HM)

Anyway, congrats.

Well, I for one am not greedy. While the $500M Mega Millions jackpot
would be nice,
I would be quite happy to score the "mere" $50M Powerball jackpot.

1177. PR Inventory

Yahoo group: laterisersgroup
Date: 2012-04-03 01:36:11 UTC
From: Ted Gurley
Topic: 1177 Message: 1177

Here is the latest Inventory of PR Materials we have. I have consolidated the materials into one box and filed all the brochures.
The sign is self contained with handles.
My goal is for this to be a grab and go PR kit.
Finally we should order a couple of the CD's and make them available to be burned onto laptops for looping or produce a club slideshow.

TG

Tri-Fold Sign - it is good focusing on club meeting, Community and Communications
Vinyl Banner - able to be hung at an event
Brochure Holders - both Letter size and 81/2 x 11 size
The Club Cards - box of 200 left.
The following brochures from ARRL:
Scouting and Amateur Radio
ARES
Leap Into Amateur Radio
Wireless Excitement
ARRL Membership
We Do That
Hello Radio
PARK Membership Application

I have ordered:
ARRL Publications Catalog
Ham Radio Youth Flyer
Serving Your Community
When All Else Fails
Do it Yourself

Approved by the board not purchased yet - Sign "Ham Radio Event Today" With PARK LOGO
Not Presented to the Board - Sign "Ham Radio Testing Tonight" With PARK LOGO

Stan,

Glad you came through the tornado OK. I was monitoring the ARES net through
Echolink. Pretty scary.

Ron,

Thanks for the spots.
My antenna is down and yesterday I was really glad that was the case.
I worked them on 12m last weekend though and I hope to add bands
this coming weekend.

1187. Field Day 2012

Yahoo group: laterisersgroup
Date: 2012-04-08 18:03:29 UTC
From: Darren Mende
Topic: 1187 Message: 1187
Attachments: 1 described; binary payloads are missing from this source WARC

Hi Everyone!

It is springtime here in Plano and that means FD is right around the corner. There has been robust conversations considering antennae and band pass filters, so the club is already starting to get FD fever.

Over the next few weeks I will be contacting those folks that are in charge of the various parts of FD that make it all work. We have antennae, food, setup, tear down, networking, computers, PR, etc., so there is much to do for everyone that wants to be a part of PARK's FD 2012.

A few things that we need right away:

1. Radios - we will need some radios for FD. A final number will be announced soon, but it looks like we will need 4-5 radios beyond what the club already has. We are using band specific filters and running low power, so borrowed radios will not treated like rental cars :-)

2. Man power - as always, we will need lots of hands for setup and tear down so that the job is not a burden to a small group. Luckily, this has not been an issue in the past few FD events and I anticipate a great turnout by our club members this year.

3. Word of mouth advertising - let your neighbors and friends know when and where FD is held. Our club is a beacon of service in our community and FD is a great opportunity to showcase the exciting aspects of our hobby to our neighbors.

If there are any questions, ideas, concerns, etc., please post them here so everyone has a chance to respond. If you know of other folks that may be interested in joining our club at this year's FD, please forward this to them and ask them to join the PARKFieldDay Yahoo! group.

I look forward to spending a great weekend with all of you at this year's FD event. I know FD will be great with the help, input, and camaraderie of PARK's members.

Field Day 2012
June 23-24, 2012

I have a an 857D, power supply, headset, battery, etc.

I can be there to set up and operate, & help with tear down
I have to leave overnight to be home with the kids.

And I'll be sure to bother people who follow me on Facebook with
repetitive postings. :)

I also have a 20m QRP SSB from Small Wonder Labs that needs some TLC
from someone who knows how to do that.

I'd love to push up a 2m loop, or fly it from a few mylar balloons to
get above the typical 35' push up pole limits. Or does anyone know where
the car dealers source their big balloons?

I have other ideas but I'll save them for the Field Day list, which this
reminder e-mail, reminded me to join. :)

Darren,
How will the power be configured? If we bring a radio, do we need to bring a power supply or batteries or what?
Thanks for your work,
David

Hi David:

Yes, indeed we will need a power supply of some sort. It can be a power supply or batteries, if the radio has that option. QRP is not out of the question and I think we can use those sparingly. The main stations should have a bit more power.

Thanks,

Darren

1194. Texas Star Party Special Event Station (W5TSP)

Yahoo group: laterisersgroup
Date: 2012-04-12 06:41:25 UTC
From: Chandranet
Topic: 1194 Message: 1194

Texas Star Party begins Sunday and along with that, the TSP amateur radio station, W5TSP, will be doing special event activities from their station at the Prude Ranch in Fort Davis, Texas. I have included a link to their page that has all of the details. This might be kind of fun for some of you guys to try (I know some of you have in the past). Several of the operators are from the Collin County area and are good friends of mine.

Here is the link that has all of the information:

http://texasstarparty.org/activities/tsp-amateur-radio/

They have a whopper of a shack there on the ranch that they have built up over the past several years. They also coordinate the star party communications, the ranch wide wi-fi infrastructure (the largest Internet cafe in west Texas, serving up a couple of thousand IP's!), and the power delivery structure for the star party (they lay out about 1.5 miles of power lines over the various areas of the ranch to power all of the telescope and imaging systems).

I'll be out there, too, and may put in time for a few QSO's while I am there.

73,
David

1202. Awards to Win

Yahoo group: laterisersgroup
Date: 2012-05-04 12:29:58 UTC
From: K5HM
Topic: 1202 Message: 1202

WAZ, DXCC, WAS, IOTA; certificates of achievement that are clear testimony to your operating prowess. Chasing awards is a niche segment of amateur radio; some might call it a cult, to aspire to capturing every possible certificate.

After reading up on various awards available, I was inspired to create unique awards to fill in some blank spots.

WOTA - Wal-Marts On The Air. Requires proof of QSO's with amateur radio stations operating from at least 400 Wal-Mart locations. Individuals or clubs may activate an individual Wal-Mart location at any time and notify WOTA authorities by registering the activation in the WOTA world wide data base. The WOTA committee will issue a unique WOTA number for the location. Each QSO submitted for credit must be a current activation at the time of contact. There are over 6,600 Wal-Mart locations worldwide. Good Luck.

Contact with Sam's Club locations do not count for WOTA credit. The WOTA committee is contemplating offering a separate award for Sam's Clubs On The Air (SCOTA) later this year.

FFOTA (Fast Food On The AIR) To be announced in 2013. There will be special endorsements for MDOTA (McDonalds On The Air), JIBOTA (Jack In the Box On The Air) and KFCOTA (you can probably figure this one out for yourself). Details to follow later.

Academy Award Award - Given for contact with hams in cities where a movie filmed in that location won the Academy Award for Best Picture. The same city cannot be used multiple times. Only one city per film. Sorry, extraterrestrial locations such as Remulak, Vulcan and other mythical locations cannot be used for this award. In addition to the certificate, each award includes a package of microwave popcorn.

Special 70th anniversary Commemorative Casablanca Award - Commemorates the 70th anniversary of the Humphrey Bogart film. The award is earned for contacts with hams in the area of the former French Morocco whose first names are: Rick, Ilsa, Victor, Louis, Heinrich, Sascha, Carl or . . . Sam (as in "Play it again Sam")

Ring of Fire Award - This award is given to hams who have contacted portable operations located on the rim of at least five active volcanoes. Considering the element of danger for the expedition operators, this is the only award in the world that is reciprocal . A person may earn this for themselves by going to five different volcanoes and contacting at least one other amateur before running for their life. Note - There is no power limit for this award although Ring of Fire expeditioners favor lightweight QRP gear in order not to hinder their need for a rapid departure!

And, my personal favorite:

The Next Year Award - This is the most prestigious of all amateur radio awards because the standard of achievement is quite high. Off hand, I can't recall a single person, who has actually won this award. It is given to amateurs who have delayed, put off or deferred making or completing any changes in their equipment, operating skill, club participation or license class. The amateur eligible for the award must apply for themselves. Of course, by doing so , one is automatically disqualified for the award, having accomplished something in the process.

Good Luck Award Hunter!

Subject: [laterisersgroup] Awards to Win

WAZ, DXCC, WAS, IOTA; certificates of achievement that are clear testimony to your operating prowess. Chasing awards is a niche segment of amateur radio; some might call it a cult, to aspire to capturing every possible certificate.

After reading up on various awards available, I was inspired to create unique awards to fill in some blank spots.

WOTA - Wal-Marts On The Air. Requires proof of QSO's with amateur radio stations operating from at least 400 Wal-Mart locations. Individuals or clubs may activate an individual Wal-Mart location at any time and notify WOTA authorities by registering the activation in the WOTA world wide data base. The WOTA committee will issue a unique WOTA number for the location. Each QSO submitted for credit must be a current activation at the time of contact. There are over 6,600 Wal-Mart locations worldwide. Good Luck.

Contact with Sam's Club locations do not count for WOTA credit. The WOTA committee is contemplating offering a separate award for Sam's Clubs On The Air (SCOTA) later this year.

FFOTA (Fast Food On The AIR) To be announced in 2013. There will be special endorsements for MDOTA (McDonalds On The Air), JIBOTA (Jack In the Box On The Air) and KFCOTA (you can probably figure this one out for yourself). Details to follow later.

Academy Award Award - Given for contact with hams in cities where a movie filmed in that location won the Academy Award for Best Picture. The same city cannot be used multiple times. Only one city per film. Sorry, extraterrestrial locations such as Remulak, Vulcan and other mythical locations cannot be used for this award. In addition to the certificate, each award includes a package of microwave popcorn.

Special 70th anniversary Commemorative Casablanca Award - Commemorates the 70th anniversary of the Humphrey Bogart film. The award is earned for contacts with hams in the area of the former French Morocco whose first names are: Rick, Ilsa, Victor, Louis, Heinrich, Sascha, Carl or . . . Sam (as in "Play it again Sam")

Ring of Fire Award - This award is given to hams who have contacted portable operations located on the rim of at least five active volcanoes. Considering the element of danger for the expedition operators, this is the only award in the world that is reciprocal . A person may earn this for themselves by going to five different volcanoes and contacting at least one other amateur before running for their life. Note - There is no power limit for this award although Ring of Fire expeditioners favor lightweight QRP gear in order not to hinder their need for a rapid departure!

And, my personal favorite:

The Next Year Award - This is the most prestigious of all amateur radio awards because the standard of achievement is quite high. Off hand, I can't recall a single person, who has actually won this award. It is given to amateurs who have delayed, put off or deferred making or completing any changes in their equipment, operating skill, club participation or license class. The amateur eligible for the award must apply for themselves. Of course, by doing so , one is automatically disqualified for the award, having accomplished something in the process.

Good Luck Award Hunter!

1204. K5P Special Events Station for HAMCOM 2012

Yahoo group: laterisersgroup
Date: 2012-05-04 16:34:09 UTC
From: K5GTX
Topic: 1204 Message: 1204

Calling all Operators!

The Plano Amateur Radio Klub will be sponsoring the HAMCOM 2012 K5P Special Events Station, June 8 ☐ 9.

The purpose of the Station is do demonstrate what an SES is, how to set one up, and have a little fun! We will be operating a Station at HAMCOM from inside the Plano Center as well as supporting those who wish to operate under the K5P call sign from remote locations in the local area.

We need your help!

· Two people to help man the booth, operate the on-site station in two hour shifts.

· Two people to help setup the antenna and booth on Friday

· Two people to help tear down the station on Saturday

· A show case antenna to be used at the site.

· A Billboard to show pictures from the PBF Station and some of the QSO Cards

· A flyer to discuss how to setup a Special Event Station (I will be writing this up and would like feedback on it)

· A table / chairs to be used at the convention so we can at least sit down!

· A QSO Card to be sent electronically and via mail

We are having a design contest for the QSO card ☐ the contest will close on May 25th ☐ submissions should be sent to K5GTX@.... A winner will be selected from the entries and announced on June 1.

More information will be posted on the Plano Amateur Radio Klub site (www.k5prk.net) in the near future. Any questions or suggestions should be directed to K5GTX@...

The following schedule is provided:

Onsite Operation

Friday, June, 8 ☐ 1300Z (8:00AM CDT) ☐ 2300Z (6:00PM CDT)

Saturday, June, 9 ☐ 1300Z (8:00AM CDT) ☐ 2300Z (6:00PM CDT)

Offsite Operation
Friday, June, 8 ☐ 1300Z (8:00AM CDT) ☐ 0500Z (12:00PM CDT)

Saturday, June, 9 ☐ 1300Z (8:00AM CDT) ☐ 0500Z (12:00PM CDT)

Band Plan

The following band plan is proposed. It is dependent on operators and QRM and, of course, band conditions.

You might want to view this link and leave a comment between May 6th and May 13th to win. Amateurradio.com is giving away 500 free full color QSL cards from KB3IFH.

http://www.amateurradio.com/win-500-free-full-color-qsl-cards/#comment-26285

I've ordered cards from KB3IFH and can attest to the quality of his product. Made in USA too.

1209. HELP NEEDED: Work party this Saturday for Walter AE5IT

Yahoo group: laterisersgroup
Date: 2012-05-11 00:31:39 UTC
From: Damon Koch
Topic: 1209 Message: 1209

Walter AE5IT can use some help this Saturday.
I'm sorry for the short notice, and I know some folks will be out in Frisco at the tech center, but I could use a few hands with the following list.

Walter says,
1. Grind stumps (I'll rent the grinder Friday night)
2. Two big trees, 3 or 4 small ones need to be cut down (anyone got a chain saw?)
3. Tree branches hauled off (we can dump them on my neighbors property)
4. Haul off rotten shed lumber. (A roll off container was $450, and I can't afford that. It might take 3 trips, but we can load my truck and take the trash to the transfer station or landfill)
5. Under my front porch there is a water pipe I had to dig up and repair. I need it covered with dirt
6. Mow and weed eat yard (My mower is working fine now)

I know this is VERY short notice, but if anyone can help, I really appreciate it. If you can help, even for an hour, please reply to me.

73,
Damon K5OCH

1211. RE: [laterisersgroup] K5P Special Events Station for HAMCOM 2012

Yahoo group: laterisersgroup
Date: 2012-05-11 15:17:56 UTC
From: K5GTX
Topic: 1204 Message: 1211

If anyone has ideas, suggestions, etc. I WELCOME THEM!!!

A further discussion on this is the location of the radio/table. After speaking with a couple of people, the idea is to put the table in the NW hall and have a 20m antenna come in there. Because the 20m is probably the best band to use during the day, we would setup the radio to be on 20m to do voice. I was thinking of using the Flex 5K as the radio because of the □eye□ candy from the Screen, but I am not sure of that. I would like to see what you thought of that as well. And finally, what antenna should we use for it?

Any ideas or suggestions or correction please let me know! I don□t want to be a lone ranger on this. I would like to see us put the best foot forward at this project.

Thanks! Greg

Calling all Operators!

The Plano Amateur Radio Klub will be sponsoring the HAMCOM 2012 K5P Special Events Station, June 8 ☐ 9.

The purpose of the Station is do demonstrate what an SES is, how to set one up, and have a little fun! We will be operating a Station at HAMCOM from inside the Plano Center as well as supporting those who wish to operate under the K5P call sign from remote locations in the local area.

We need your help!

* Two people to help man the booth, operate the on-site station in two hour shifts.

* Two people to help setup the antenna and booth on Friday

* Two people to help tear down the station on Saturday

* A show case antenna to be used at the site.

* A Billboard to show pictures from the PBF Station and some of the QSL Cards

* A flyer to discuss how to setup a Special Event Station (I will be writing this up and would like feedback on it)

* A table / chairs to be used at the convention so we can at least sit down!

* A QSL Card to be sent electronically and via mail

We are having a design contest for the QSL card ☐ the contest will close on May 25th ☐ submissions should be sent to K5GTX@arrl.net. A winner will be selected from the entries and announced on June 1.

More information will be posted on the Plano Amateur Radio Klub site (www.k5prk.net) in the near future. Any questions or suggestions should be directed to K5GTX@...

The following schedule is provided:

Onsite Operation

Friday, June, 8 ☐ 1300Z (8:00AM CDT) ☐ 2300Z (6:00PM CDT)

Saturday, June, 9 ☐ 1300Z (8:00AM CDT) ☐ 2300Z (6:00PM CDT)

Offsite Operation
Friday, June, 8 ☐ 1300Z (8:00AM CDT) ☐ 0500Z (12:00PM CDT)

Saturday, June, 9 ☐ 1300Z (8:00AM CDT) ☐ 0500Z (12:00PM CDT)

Band Plan

The following band plan is proposed. It is dependent on operators and QRM and, of course, band conditions. It should be noted that we will not be on all of these bands at the same time. These are proposed to support those operating from home.

Phone ☐ SSB ±QRM

10 M: 28.450

15 M: 21.325

17 M: 18.140

20 M: 14.227

40 M: 7.230

80 M: 3.830

Digital ☐ SSB

PSK: 10 M: 28.070

20 M: 14.070

30 M: 10.140

40 M: 7.070

80 M: 3.580

JT65: 10M: 28.076

20 M: 14.076

30 M: 10.139

40 M: 7.076

CW: 20 M: 14.060

40 M: 7.060

73 to all,

Greg Evans

Topic: 1204 Message: 1215

Greg,

I am waiting to find out if I get to volunteer for HAMCOM to get in free, but I will help in any capacity that I can. I have a bad back, so I'll need to take care of it and not lift much. I have a 5' X 2'5" folding table that we can use, but it will need a cover on it to make it look better than it is. I have 2 metal folding chairs and 2 camping type chairs that we can use. They look good. I will also be taking pictures from and of the special event station. I will help man the event station for two hours if needed. I have a hand truck too, I there is a need for it.

Do you have permission to run a feedline into the building? The Elecraft rep last year said they weren't allowed to do that.

From: Andy Knepler
Topic: 1204 Message: 1218

You guys are welcome to use my Mosley TA-63. It's is being stored at my old house which is only about a mile from Hamcom. It's good for all bands 20-6 meters. I have the 40 meter add-on kit, but I would not recommend using it for this event as it makes the antenna much larger and more cumbersome, and requires the use of ropes to keep it from sagging. When I took it down I color coded everything, and only pulled the elements off of the boom, so it should go back together pretty quickly. We would need a large support mast though, and I don't have one to offer up. I do have an Alliance HD-73 rotor, we might need that depending on whether the support mast can rotate. Let me know if you are interested.

Thanks,

Andy Knepler

Subject: [laterisersgroup] HELP NEEDED: Work party this Saturday for Walter AE5IT

Walter AE5IT can use some help this Saturday.
I'm sorry for the short notice, and I know some folks will be out in Frisco at the tech center, but I could use a few hands with the following list.

Walter says,
1. Grind stumps (I'll rent the grinder Friday night)
2. Two big trees, 3 or 4 small ones need to be cut down (anyone got a chain saw?)
3. Tree branches hauled off (we can dump them on my neighbors property)
4. Haul off rotten shed lumber. (A roll off container was $450, and I can't afford that. It might take 3 trips, but we can load my truck and take the trash to the transfer station or landfill)
5. Under my front porch there is a water pipe I had to dig up and repair. I need it covered with dirt
6. Mow and weed eat yard (My mower is working fine now)

I know this is VERY short notice, but if anyone can help, I really appreciate it. If you can help, even for an hour, please reply to me.

73,
Damon K5OCH

1220. Armed Forces Crossband Test

Yahoo group: laterisersgroup
Date: 2012-05-12 03:52:12 UTC
From: Stan
Topic: 1220 Message: 1220

Tomorrow -Saturday (5/12) is the annual Armed Forces Crossband Test. It is the one day of the year when we can work military stations all over the country.
They will transmit on their normal frequencies out of band and listen within the General part of the amateur bands. Tune them in and they will tell you exactly where they are listening.
It's a great opportunity to practice working split mode (also used by many DX stations). They also have some nice QSL cards and you don't even need to send for many of them,
they will just send them to you. I participated in this event last year and had a lot of fun. More information is available here providing specific stations and frequencies:

http://www.arrl.org/news/coast-guard-to-join-armed-forces-crossband-communications-test

Be sure to click the "here" link at the end of the article to get specifics on all of the stations. I hope you get a chance to give it a try!

73,
Stan

If we can keep Damond from putting up a 6 meter antenna maybe it will stay open.
KF5FEA,Rusty.

Topic: 1221 Message: 1223

Now don't you worry about 6 Meters. It is after all the "Magic" band.
It will open and close on a regular basis
and may even change the direction of an opening in mere minutes from now
until early August.
It is quite resilient and robust. Even someone with Damon's very
prodigious (and even legendary) band killing skills
would struggle to have much impact. Think of squeezing a handful of
Jello. Squeeze one place and it just squirts out another. :-)

Too bad. This was a one shot deal on the day before her departure to San Pedro, Calif. According to the club web site the ship is to become a museum ship. SO maybe next year she will be on the air on MSWE 2013.

W6BB is the club call for ythe Univ of Cal at Berkley ham club. You can google W6BB to get their website and infor on the IOWA.

Oh well! I had read the other day about the refurb of the ship, which has been in mothballs for years. They spent some serious bucks getting her ready! The museum ship experience they have planned seems pretty cool and singularly unique. Tonight seemed like a rather ad-hoc and poorly planned operation on the air, so not much we can do about that. Thanks to Damon for alerting us to it. I had already shut things down.
As you say, hopefully by next year it can be on the air for Museum Ships Weekend.

Topic: 1204 Message: 1249

I'll be there both days as an ARRL volunteer as the parking lot volunteer
to assist the mobility challenged. Got a call last night from the ARRL
volunteer coordinator to confirm. I'm to be there Friday AM @ 0700. :)

Late Risers,

Please provide feedback on this proposed press release. I am sure I missed something or otherwise, so please look it over and send comments back to me today. Ted is planning to send this out in the morning.

73

Greg

Calling all Operators!

In conjunction with HAMCOM 2012, the biggest Ham Fest in Texas, the Plano Amateur Radio Klub is sponsoring the HAMCOM 2012 K5P Special Event Station, June 8 ☐ 9, 2012.

The purpose of the Station is to demonstrate what a Special Event Station is, how to set an SES up, and have a lot of fun! We will be operating a Station at HAMCOM at the Plano Center.

We are encouraging hams to operate from home or other remote locations in the local area under the K5P call sign. Logs for the event should be forwarded to <mailto:K5GTX@...> K5GTX@... by June 15. QSLs will be available by sending a SASE and electronically.

If you are attending HAMCOM, we would like to invite you to make guest contacts or help us man the booth.

Updated information will be posted on the Plano Amateur Radio Klub site (<http://www.k5prk.net> www.k5prk.net) and we encourage signups for manning the booth to support operating the station and supporting visitors of the station.

The following schedule is provided:

Onsite Operation

Friday, June, 8 ☐ 1300Z (8:00AM CDT) ☐ 2300Z (6:00PM CDT)

Saturday, June, 9 ☐ 1300Z (8:00AM CDT) ☐ 2300Z (6:00PM CDT)

Offsite Operation
Friday, June, 8 ☐ 1300Z (8:00AM CDT) ☐ 0500Z (12:00PM CDT)

Saturday, June, 9 ☐ 1300Z (8:00AM CDT) ☐ 0500Z (12:00PM CDT)

Band Plan

K5P will be operating primarily on 14.320 (± QRM) at the Plano Center. Remote Operation is encouraged. Operators at remote locations can access a suggested band plan at <http://www.k5prk.net> www.k5prk.net.

73 to all,

Greg Evans

1255. Re: [laterisersgroup] K5P Special Event Station for HAMCOM 2012

Yahoo group: laterisersgroup
Date: 2012-05-27 17:06:17 UTC
From: Stan
Topic: 1252 Message: 1255

It looks good!

I have two minor grammatical suggestions. 1. I think it reads better if we add the word "also" to sentence 4. As in "We are* _also_* encouraging hams to operate from home..."
2. Sentence 6 should read "supporting visitors* _to_* the station...", not of the station.

I also have a question about offsite operation. We have the special callsign for 48 hours, so why limit the hours of use? If you don't want anyone to use it before Ham-Com officially opens on Friday, well okay. But why restrict operation early Saturday morning? It may not make any practical difference, but some folks get up early. If they wanted to play before going to Ham-Com, what's the harm?

Just my 2 cents,

Stan

I personally don't see that we need a whole lot more publicity. It is listed in the June QST and included in all of the Ham-Com publicity. Given the fact that the station will be setup outside, operation is likely to be sporadic at best. Unlike K5B, home operation will also be spotty,
as most folks will be at Ham-Com. If someone is doing some significant operation, we just need to spot them. As we learned from K5B, if you spot it, they will come!!

The purpose of the PR is more "window dressing." I have a list that
includes all ARRL officers in the region, the clubs from the region and
the newspapers.
It demonstrates the PARK is active and vibrant.

I was amazed that my last release about the Balloon festival showed up
in a UK newspaper!

Ted,

I'm very happy to leave the PR game to you. My point was basically twofold:

1. Additional PR is not critical to any on-air success of K5P.
2. Let's be careful not to over-hype something that may not
significantly materialize in on-air operation.

1261. Fwd: [laterisersgroup] K5P Special Event Station for HAMCOM 2012

Date: 2012-05-27 21:37:18 UTC
From: Greg Evans
Topic: 1261 Message: 1261

Thank you guys for the feedback. And that was a duh on my part to not limit it on those days to the remote ops so I have updated accordingly the end times and start time on Saturday...

This is why I wanted to have others read this just in case.

Ted, if we don't have additional feedback this evening, the below is ready to be sent out.

Thanks to all of you and Happy Memorial Day,

Greg

Greg, thanks for making the suggested changes!

Sorry, but I have only one final nit to pick.

On the ending time of home use of K5P, you have: *Sunday, June, 10 – 0459Z (11:59PM CDT)*
There is a tendency for folks to get confused with times. I would not want someone to get confused
and only see the Sunday and 11:59PM and try to operate on Sunday here in violation of our allocation of the special call.
Since the call is assigned by local time, I suggest we eliminate the Zulu time and just show local -
Friday, June, 8 -(8:00AM CDT) to Saturday, June, 9 – (11:59PM CDT)
or if you prefer, show Zulu time completely separate.

I'll go away now and Happy Memorial Day to all!.

73,
Stan

Once you have everything fixed, I would run it past Fred just to keep him (Hamcom) in the loop and also to see if he has any constructive comments.

Looks good to me with the fixes others have suggested.

1267. Logging program.

Yahoo group: laterisersgroup
Date: 2012-05-28 14:34:12 UTC
From: kf5fea
Topic: 1267 Message: 1267

I need to get a logging program for my new computer, I think I had M1NN last time. Just wanted to see if anyone had other suggestions or if I should go back with the old one.

From: K5HM
Topic: 1267 Message: 1268

Rusty,

I use N1MM but it is primarily designed as a contest logger, not for general logging. I use N1MM for Contests and then I downloaded my contest logs into N3FJP.

If you want something for general use, try N3FJP Amateur contact log (http://www.n3fjp.com/). You can download it for free and use it for up to 30 contacts before you have to pay. It has built in rig control and DX spotting. Cost is $25.00 one time. Pretty reasonable and they have a good Yahoo Group for support. The biggest weakness of N3FJP, IMHO is the award tracking. It does not distinguish between eQSL, paper and LOTW confirmations. If that is not a big thing for you, then N3FJP would be my recommendation.

If you want something more feature packed, you could try Ham Radio Deluxe. I've been using that for a year now. It used to be free but the new owners have made it a $60/year subscription. It has a long learning curve and the manuals are all out of date. So I have wasted a lot of time looking for a way to do something. It works OK but I'm not going to stay with it.

Right now, I am taking a look at DX Labs (dxlabsuite.com). It is free and is more robust than N3FJP. I've heard good things about it. But who knows, I may still go back to N3FJP when it is all over.

Rusty,

For general logging, I use XMlog. It's free, it's simple, and it does everything I need. Don't have the link handy,but if you google XMlog it'll find it.

I saw a presentation on the upgrades to Ham Radio Deluxe and it includes a bunch of cool features to logging. Better ways to keep track of your contacts towards awards, visual indication if they have confirmed or not, etc.

Version 5.2.2 is still free, but 6.0 will be $59.95. I would go with 5.2.2 now and get 6.0 in August when it comes out. I will check into a group buy for the club to knock a few bucks off. They said there would be a discount, but they did not know how much.

The new team said they knocked out 480 of the 600 bug reports so far, and are working on enhancements. I have the CD if you want to load 5.2.2.

They will be presenting at Hamcom at 4:00 p.m. Friday. Check it out.

Kip

1272. REMINDER: Work Day at Walter AE5IT's house Saturday June 2

Yahoo group: laterisersgroup
Date: 2012-05-29 22:30:07 UTC
From: Damon Koch
Topic: 1272 Message: 1272

Hi Everyone,
This is a reminder that the work day at Walter's house is this Saturday, June 2.
I talked to Walter a few minutes ago, and he'll have a stump grinder and coffee waiting. I plan on starting at 9AM so folks can still go to breakfast.
The weather looks like it'll be a nice day, hopefully cooler than last weekend.

We can still use a chain saw or two. If you have one, please bring it. Also bring work gloves.

We need as many people as possible to work on the following:
mow the grass
cut down some trees and dispose
grind stumps below grade
cut up and haul off construction debris
fill in a hole from recent plumbing work

Walter's house is 5520 Lea Lane, McKinney Texas
RDF beaconing on 146.565

Thank you for volunteering to help! Bring a friend.

That is interesting.

Looks like a nice balloon though!

Kip

1277. Sci-Tech center tower status

Yahoo group: laterisersgroup
Date: 2012-05-31 00:05:21 UTC
From: Kipton Moravec
Topic: 1277 Message: 1277

I had to rent a U-Haul truck and moved the Tower bracket from where we built it to the powder coating place in Mesquite. They think it will be finished around Tuesday. Then we have to get it from there to Frisco and find a time to install it. They estimated $550 to sand blast and powder coat it.

We are still missing the eight 3" square washers we were going to make from 1/4" steel or aluminum fro the bolts going through the wall.

We need to do something. At this point I think we should use Aluminum
because it will probably not be powder coated and it will not corrode.

Maybe a trip to Garland Steel and see what they have for drop offs?

1280. K5P HamCom Special Event Station

Yahoo group: laterisersgroup
Date: 2012-05-31 01:29:36 UTC
From: K5GTX
Topic: 1280 Message: 1280

Hello and thank you for registering for the Special Event Station.

We will be putting together a schedule over this weekend for manning the Station. We may also be assisting the Boy Scouts with overflow from their station. We basically will need people to help man the station, operate and help others operate the station and answer questions.

If you have specific times/dates that you would like, please let me know as soon as possible so that I can work the schedule out.

More details will follow about the event soon. See you at HamCom!

73,

Greg Evans

Hi Greg:

Is there a physical list to which this email references?

Thanks,

Darren

1282. PARK Field Day yahoo group

Yahoo group: laterisersgroup
Date: 2012-05-31 01:54:59 UTC
From: Anthony
Topic: 1280 Message: 1282

I've tried two test postings to the Field Day group. I haven't seen my posts, and no one has replied to them. Am I getting through?

The all-thread through the wall is 5/8". I thought you recommended 3" square for the plate on the other side of the wall. That sounded good to me. I think 3" square will distribute the pressure on the wall much better than just a washer.

I looked for fender washers and they do not make fender washers for 5/8"
A fender washer for 1/2" is 2" diameter.

1291. K5P Special Event Station

Yahoo group: laterisersgroup
Date: 2012-06-04 00:50:41 UTC
From: Greg Evans
Topic: 1291 Message: 1291

Hello and thank you for volunteering for the K5P Special Event Station. The station at the Plano Center will be located on the north west side of the building. I will be setting the station up on Friday Morning. Michael has graciously offered to provide the Chairs and a Table to setup on. We may need a second canopy to provide additional shade, so if anyone has one, please let me know. The Station will be operating at the Plano Center on 20m (14.320 adjusted for QRM). This keeps it simple for us to operate and helps us focus on discussing the Special Event Sation and showing others about setting one up. We will have literature available on the table to hand out. We will be keeping paper logs (to keep things simple) at the site and the logs will be provided. You are encouraged to invite people to make contacts and participate. We still need additional coverage during the event. Below is the tentative schedule. Please let me know if this needs to be changed or you are available to cover additional time slots. K5P Schedule On-Site Schedule

Friday
7:30-8:00 AM Setup Greg Evans - K5GTX
8:00 - 10:00 Greg Evans - K5GTX Jacquelyn Sword
10:00 - 12:00 BJ Watkins - KE5UMC
12:00 - 2:00 Michael Payne - KE5TJL
2:00 - 4:00
4:00 - 6:00 Paul Coppage

Saturday
8:00 - 10:00 Andy Knepler
10:00 - 12:00 Noreen O'Connell - K5XPO
12:00 - 2:00 Tony Campbell - W5ADC
2:00 - 4:00 Jim Champion - AE5YD
4:00 - 6:00 Thank you and I look forward to seeing you at HamCom and the K5P Special Event Station! Greg EvansK5GTX214.505.6738

A man's trash can be other man's treasure:

I got two pass-thru porcelain insulators, 25 cents each.

And a mid-size rolling inductor, 14uH, for $10.00

Also there was the K5P station operating. No reply to their CQs around 10 AM.

They had a SteppIR vertical with just 3 radials covering from around 0 to 30 degrees azimuth and the building blocked all the SE quadrant.

I offered to help with the CW but there was no key.

I went to a conference about how to interpret the weather radar images, thinking it was about rain or snow scatter operation. I believe I was the only non storm-chasing ham there. Anyway, it had some interesting information, there is always more things to learn.

I got a key with that Rx only Yaesu tube radio.
With all that I've got going on, doubt that I'll get to CW anytime soon.
I'll put it in the Jeep so that it will remind me to show up at the next
club meeting.

1298. Work Session At SciTech Center in Frisco.

Yahoo group: laterisersgroup
Date: 2012-06-13 02:01:05 UTC
From: Kipton Moravec
Topic: 1298 Message: 1298

We are shooting for a start at 9:00 a.m. Saturday. I will be going directly from breakfast.

Here is the plan.

We have the brace we made which needs to go to the top and 8 holes need to be drilled through the 8" walls.

The tower, rotor and mast need to be put together on the roof.

The C3SS Force 12 antenna needs to be assembled probably on the ground by a team of 3 or 4 people. It is usually a lot of parts.

Everyone needs to bring tools, especially sockets, and some big wrenches. A 18" or 24" 8 crescent wrench would be helpful for the 5/8" nuts.

It looks like Texas Towers will have everything we need by Friday for us to pick up. Is someone available to get the stuff from Texas Towers on Friday before they close? You will need a truck.

We are getting from Texas Towers:
Rohn top section with sleeve
8 foot mast
EB1 Balun (1.8 - 60 MHz)
C3SS from Force 12

Is anyone available to get a trailer to Mesquite to pick up the mount we made and take it to Frisco? They also close at 5:00 p.m. The longest piece is 12' long and 5' wide.

Rusty can you get the guy with the crane to be there Saturday?

Who can help?

Kip

1299. Pre Ice Cream Social Fox Hunt

Yahoo group: laterisersgroup

Next Sunday, June 17, I'm organizing a Fox Hunt an hour before the Ice Cream Social. We'll meet at 5:00 pm at Town Lake Park on Wilson Creek Parkway in McKinney. Wilson Creek in between El Dorado and Virginia on the east side of SH 75. The parking lot is on the east side, between the park and the baseball fields. Bring your beams, HT's, and attenuators, and we'll go find the rabbit!

At 6, we'll go have Ice Cream, and then maybe we'll have another hunt after.

1306. Free Tower and 6 Element Beam Available

Yahoo group: laterisersgroup
Date: 2012-06-18 19:20:19 UTC
From: Darren Mende
Topic: 1306 Message: 1306

Hi All:

There is a non-ham gentleman located in Arlington that has a ~50 tower (looks like Rohn 25) with a 6 element HF beam and rotor attached. The antenna is available for no charge, but will have to be removed along with the tower.

The gentleman's name is Vance Welch and he can be reached at vancewelch at rocketmail dot com. If you know of anyone interested or that may be able to help this gentleman, please forward the message.

I will post photos in the "Photos" section and make them available via email.

Thanks and 73,

Darren

Subject: [laterisersgroup] Free Tower and 6 Element Beam Available

Hi All:

There is a non-ham gentleman located in Arlington that has a ~50 tower (looks like Rohn 25) with a 6 element HF beam and rotor attached. The antenna is available for no charge, but will have to be removed along with the tower.

The gentleman's name is Vance Welch and he can be reached at vancewelch at rocketmail dot com. If you know of anyone interested or that may be able to help this gentleman, please forward the message.

I will post photos in the "Photos" section and make them available via email.

Thanks and 73,

Darren

Guinness Book of Records look out!

The Brazos Valley ARC would like to challenge area General Class and Technician licensees to step up and sit for the Amateur Extra Exam on a single date.

The tentative date is July 15th. Leading up to that date we will be offering weekly training on Wednesday evening in person or through a virtual training session on-line. The training and exam has been tentatively located at the Elks Lodge Hall near West Airport and Murphy Road in Stafford TX. More information to follow.

I would like to encourage your members to step up to this one time challenge. I realize that each club offers training and VE testing sessions. Not wanting to create any issues, I suggest that each organization could have its own VE session on the same date or decide to come and participate in the VE Session at the BVARC location. We'll arrange it so that examiners from different clubs get credit for participating with their candidates.

FYI, The record for the greatest number of people to sit for the Technician test at one time is 114. Set last year by Cal Poly students in Berkley, Calif. There is no similar record for Amateur Extra. Lets make this a ham radio first!

Let Matt know if you are willing to participate either as a club, as a VE or as a presumptive Amateur Extra Licensee.

Please direct all inquiries to Matt Tatro at matttatro@...

Ok guys . . . one of my favorite special events is coming up this weekend.
It is the 4th annual 13 Colonies Special Event.

You can celebrate the 4th of July in a unique ham radio way. Beginning June 30th - July 5th, special event stations K2A - K2M. one for each of the original 13 colonies will be on the air. More info is at http://www.13colonies.info/

Work one or all and get a unique QSL or certificate for this uniquely American holiday. Better than fireworks.

And remember, God Bless America.

1331. 200th Anniversary of War of 1812

Yahoo group: laterisersgroup
Date: 2012-06-28 17:00:28 UTC
From: K5HM
Topic: 1331 Message: 1331
Attachments: 2 described; binary payloads are missing from this source WARC

History Buffs Attention!

The War of 1812 was viewed by many Americans at the time as a second American Revolution to establish our rights as a sovereign power. For the British, it was merely a sideshow to the larger war with Napoleon that was going on at the time.

This summer there will be several special event stations with distinctive call signs to commemorate British and Canadian victories over the Yanks. If you are a WPX chaser or like collecting Special Event QSL's here are a few to look out for.

VX3ROYL - Special Event Call Sign to mark the 200th anniversary of the Escape of the Royal George, a British corvette, from an American fleet during the War of 1812. I worked this guy last night on PSK31. Info on QRZ.com

XM31812 - Commemorating the Battle of Stoney Creek July 13 - 15
www.wix.com/xm31812/xm31812

XL31812 - Commemorating the Battle of Fort Malden August 3 - 5
http://www.arrl.org/special-event-stations

CG3B - 200th Anniversary of Friendship and Peace between US and Canada AFTER the War of 1812. July 1 - July 31

1332. Ham RAdio and the 2012 Summer Games

Yahoo group: laterisersgroup
Date: 2012-06-28 17:21:13 UTC
From: K5HM
Topic: 1332 Message: 1332
Attachments: 2 described; binary payloads are missing from this source WARC

The Radio Society of Great Britain and Ofcom have reached agreement on the optional use of special call signs during the 2012 Olympic Games in the UK. For the period of the Olympic Games and Paralympic Games (July 21st to Sept 9th) UK amateurs will be on the air with the special prefix added to their normal call sign.

The letter O will be added to calls, or replace the regional identifier. For example (where aaa represents the final alpha block of the callsign):

M3aaa becomes MO3aaa
G3aaa becomes GO3aaa
GM3aaa becomes GO3aaa
2E0aaa becomes 2O0aaa (Two Oscar Zero aaa)
2M0aaa becomes 2O0aaa (Two Oscar Zero aaa)
GX3aaa becomes GO3aaa

Calls in the series GB2012aaa will also be available for Special Event Stations relating to the Olympics. Licenses will also be issued for four flagship stations using the prefix 2O12a where O is the letter O, and a is a single letter relating to the location of the station.

Two of these stations are:

2O12L - London

2O12W - Barry, Wales

Cheerio! Good Show!

1333. Route 66 On the AIr

Yahoo group: laterisersgroup
Date: 2012-06-28 17:54:11 UTC
From: K5HM
Topic: 1333 Message: 1333

If you are a fifties person, and many of us are, you remember Route 66. The legendary highway between Chicago and Los Angeles, passing through parts of Texas. .

That's right, The Mother Road, the Main Street of America, was officially removed from the United States Highway System on June 27, 1985 after it had been decided the route was no longer relevant and had been replaced by the Interstate Highway System.

They're kidding us right? No longer relevant? Who can forget those great cars with the fins, convertible tops, continental kits and the chrome? The boat anchors with real tubes and Heathkits, Hallicrafters. What about all those greasy diners along the way with jukeboxes. playing classic rock and roll on real records and gas at 30 cents a gallon? And James Dean, Marlon Brando, Sandra Dee, Frankie Avalon, Annette Funicello. . .and, the King, Elvis (I know he's still out there).

Now you can re-live the romance and legend of Route 66 during this 12th Annual Special Event, Route 66 On The Air, September 8th - 12th, 2012. A series of special event stations with call signs W6A through W6T will be operating from locations along the Mother Road. QSL to each station separately, they are worth collecting.

More info will be available on www.w6jbt.org <http://www.w6jbt.org/> soon. Meantime mark your calendars.

(Note to self: Lay off the 5 hour energy drink).

Subject: [laterisersgroup] 13 Colonies Special Event

Ok guys . . . one of my favorite special events is coming up this weekend.
It is the 4th annual 13 Colonies Special Event.

You can celebrate the 4th of July in a unique ham radio way. Beginning June 30th - July 5th, special event stations K2A - K2M. one for each of the original 13 colonies will be on the air. More info is at http://www.13colonies.info/

Work one or all and get a unique QSL or certificate for this uniquely American holiday. Better than fireworks.

And remember, God Bless America.

73,

Ron, K5HM

Sure, tell me after I have my antenna on the ground. :-)
Guess I'll have to be happy to have scored P3EU in Cypress on 20M this evening.

How's everyone doing with the 13 Colonies Special Event?
Ron, I heard you working one station a little ahead of me. K2E maybe?
So far, I've scored 9, but the remaining 4 have been pretty scarce.
Conditions on 20M were pretty marginal this weekend, but at least some sun spots are back.

Sorry I have not checked the list earlier.

Things are pretty hectic. I arrived in Taipei yesterday, and have been working all day.

What is happening on the 3"x3" or 4"x4" squares for the 5/8" rods to go through? Do we have something yet?

Kip

I had French Polynesia confirmed but this station has a different IOTA number (OC-067); it helps me with my IOTA. Have 85 confirmed. 15 to go!

I spent a good portion of the weekend working the Canada Day Contest. Made 43 Canadian Q's. I didn't work any US stations in the contest by design. Was looking for provinces. Nailed VY0RAC (Nunavut), CQ Zone 2. Helps my WAZ pursuit. Still need to get Yukon on 20 though. Then I will qualify for the WACA Certificate (Worked All Canada, Ay?)

13 Colonies: I watched the DX Clusters during the Canada Day contest so I could find the 13 Colonies stations. When I found one , I would switch over and work them, then go back to the contest. I've got 8 so far plus the WM3PEN bonus station. I could hear K2M, K2G but couldn't work the pileup. Too tired.

Ditto for 1A0C (Malta). Could hear them clear on 20 but was too tired to have patience for the pileup. Station was working split. A lot of bad manners and language; guys tuning up on the frequency and worse language directed at hams not observing the split.

I too spent a lot of time switching between the contest and the special event. Sadly about the only band worth anything here was 20M. The pileups were pretty bad, but I managed to get K2M and K2G.
Never heard or even saw a spot for K2B.

The pileup for 1A0C was so ridiculous I didn't even try (though it did prompt me to figure out split on the new rig!). The only reason I was able to work P3EU in Cypress was because he was going by call area.
I never heard any VY0's during the contest (though I've worked Zone 2 before). As luck would have it though, I worked Larry, VY0HL in Nunavut on 6 meters last week during an opening.
I wouldn't be surprised if it was Larry using the RAC call for the contest. There can't be just a ton of hams in Nunavut.

Sun Spot numbers are up, so let's hope for better propagation soon!

1353. Field Day 2012

Yahoo group: laterisersgroup
Date: 2012-07-03 15:05:57 UTC
From: K5GTX
Topic: 1187 Message: 1353

Dear Fellow Field Day'ers

I would like to take this opportunity to thank each and every one of you for your contribution of hard work, time, and blood that made this Field Day a success. Because of your sacrifices, I believe that it was a rewarding experience for all of us.

Our goals this year were to have fun and to improve our operation over last year. I feel that we accomplished both.

1) Having fun! Field Day is an opportunity for all of us to get reacquainted with each other. Our daily lives tend to take us away to from the things we enjoy about Amateur Radio and away from the friendships we develop in the hobby. Let's face it, Amateur Radio is a unique hobby that forces us to interact with other Amateur Radio Operators - whether it is on the radio or in person. It's those times that make it special. Because of this unique nature of the hobby, it encourages us in other aspects of our day to day lives. As an example, a neighbor told me one day that since I had been in ham radio, I had become more open and conversational than before. I never thought of it that way before. But then again, I probably would not have built as strong of a friendship with my "Elmer" if it wasn't for Ham Radio. I invited him out to Field Day - he spent over four hours on Saturday helping set up and talking with new friends. Then he went home and got on the air because the experience had gotten him excited about ham radio again!

We had more foot traffic this year than last - more use of GOTA and more public visitors. I had the privilege of working with a young man who wants to do a Science Fair project on Ham Radio because of what he learned at Field Day. All of us that worked Field Day should feel proud and a sense of accomplishment - this is what Field Day is all about!

2) Improved Operation! With new band filters, a new table layout, a renewed effort at captaining the bands, and the configuration planning of the antennas, we did not stomp on transmissions of others and helped smooth the flow of our efforts. Yes we did have some periodic interference and some other problems (including those blasted bird annoyer speakers that annoyed the bipeds more!), but we managed it. While not everything went perfectly, considering the number of people and the amount of equipment it went very well, in my opinion.

3) Set Up and Take Down! I was completely blown away how we managed to get everything up and running with time to spare and then take everything back down in an hour. Proof that many hands make a lot of work easier!

Special thanks goes to:

1) Tony (W5ADC) - He knows antennas and just makes it happen - 'nuff said! And I love his generator!

2) Rusty (KF5FEA) and Scott (AE5SG) - The Food Meisters! Water, Food, ICE, picnic supplies - and then cooked it!

3) Darren (K5QB) - For his help and support. Without Darren, I would be bald now.

4) Michael (KE5TGL) - Photography - Taking great pictures so that we will remember Field Day for a lifetime. (And there were a few others that took pictures too, including Seal Team 6).

5) Ted (KD5VFB) - Public Relations - He sent out an impressive Press Release and it made it into the local papers! And we had elected and government officials visit. His work on the Tri-fold and brochures were a very nice touch!

6) Eric (KE5VBO) - Network - It just worked! The logging and the local network that he put in worked wirelessly - in spite of the doubts.

7) Marvin (KA5HMI) - Blood, Sweat and Signs - Yes Marvin Shared his blood with the PARK sign at the front entrance to the park while setting it up. Marvin is proud of his Field Day War wound - just ask him! And the signs looked great!

8) Kip (AE5IB) - Support - Thank you Kip!

9) All of the rest of you! - This includes the ones I should have listed but forgot to.. We could not have done it without you. You brought equipment, supplies, food, drinks, knowledge and your great friendship! You came out in droves and I sincerely hope you learned something and had a great time! (BTW, the next time you see Jake, ask him if he has seen any more stowaway creatures in the Pod Comms Boxes?)

Lessons Learned:

Well there were a few. And there is new opportunity for expansion as well. We will gather the feedback you give us and try to incorporate it next year. But it is important that YOU provide us with constructive feedback! It's the only way we will know on what we need to improve on! And for those of you who did not attend, you are always welcome to join us and provide input!

This was my second Field Day and it was a great experience that I will always remember. I cannot thank each and every one of you enough for that!

Sincerely yours and 73

Greg Evans

And...

Thanks very much to Greg for taking on a new challenge and successfully engineering a positive result. FD is all about the group effort, but it takes someone to herd all of the cats!!

Thanks Greg!!!

Darren

1356. Ham needs our help with wire antenna

Yahoo group: laterisersgroup
Date: 2012-07-04 20:20:36 UTC
From: ke5tjl
Topic: 1356 Message: 1356

Hi, guys! Bill Crook, from the PARK club, has serious health problems and needs some help in putting up a G5RV antenna at his home in Plano, Texas. Could a couple of guys help me in stringing up his antenna sometime? I know there are other things going on on the weekends, but maybe some of us could work on it during the week. I will go look at his house this week and see what is needed and then see when it is convenient for Bill to be there. I sure would appreciate any help anyone could commit to. Thanks in advance!

I have two Heil circular 8-pin to Heil headset adapters. I think they are used with Yaesu and Tentec radios. The model is a AD-1-Y. If you can use one or both of them let me know. The price will be very attractive.

Yes, he said he was running an amp, but even more impressive than his signal was his skill at working a pileup.
He clearly had a lot of experience working contest pileups because he was typically pulling 2 calls at once and working them back-to-back before calling QRZ. It was totally no nonsense. I bet he was working at least 100 Q's an hour early on.

1369. Adding a radio to the shack....question

Yahoo group: laterisersgroup
Date: 2012-07-09 18:31:02 UTC
From: k5wdy
Topic: 1369 Message: 1369

Old timers,

I am going to add a 2 meter radio to the shack so I don't have to sit in my truck to listen to various nets.
My question is-
Will I be missing out on anything as far as ARES nets, tech nets,etc..
by not getting a dual band radio?
I have yet to use 70cm but I'm pretty new to this and just don't know whats up.

Thanks,

Woody
K5WDY

From: rusty delaney
Topic: 1369 Message: 1370

There isn't a lot of activity on 70cm here. If cost is an issue then a 2 meter will be fine for weather/good news/and tech nets.
KF5FEA,Rusty.

Woody,

Here is my 2 cents worth, fully acknowledging that I am not a great
expert on everything that happens on repeaters.
Part of this answer depends on your budget and if you are buying a new
or used radio. If buying new, most radios will be dual band,
so you probably won't be paying a big premium to get both bands and you
will get a ton of memories and all the latest features.
On the other hand, if buying used, mobile 2M rigs in the 25-50 watt
range can be had for under $100 and are perfectly adequate to use as a base.
They may not have as many memories and may be more basic in
functionality, but sometimes that's a good thing!

As for activity, few folks would argue that the bulk of it is on the 2M
repeaters. The 440 repeaters are sometimes used as backup, or for
working a specific event,
but I'm not aware of any scheduled nets on a 440 repeater. Anyone know
of any 440 nets?

One interesting thing about the 440 machines is that they are sometimes
linked to other repeaters. The Rosston repeater in particular comes to
mind.
I once heard a guy I went to college with using a 6M repeater in
Southern California, which was linked to the Rosston 440 repeater and he
was talking
to folks as far away as Sherman. I'm quite sure some others in the area
are linked as well. There's also the repeater to the north of us
discussed at the PARK
meeting a couple of months ago that stores and forwards photos -
basically a UHF SSTV simplex repeater. So there is some activity.
Still, most 440 repeaters
are primarily time announcement stations and generally the time is
wrong. :-)

Everyone, please chime in if I've missed something.

73,
Stan

Rusty is right, you really don't need 70cm because I never hear anything on it. 2M will do you well for nets, etc.

Old timers,

I am going to add a 2 meter radio to the shack so I don't have to sit in my truck to listen to various nets.
My question is-
Will I be missing out on anything as far as ARES nets, tech nets,etc..
by not getting a dual band radio?
I have yet to use 70cm but I'm pretty new to this and just don't know whats up.

Thanks,

Woody

Thanks for your input.
Looks like i'm going to Tx Towers tomorrow for a 2meter radio.

I really appreciate the help.

From: Greg Evans
Topic: 1369 Message: 1375

I believe that the 440 repeater that we or McKinney has is used as the 10 Meter Link to the Texoma HamSwap net on Saturday mornings as well. But it is rare that I get on 440. Jay Ulrich, who is in the area, has a number of repeaters that link multiple bands together (VHF/UHF and I think 220) together. But it seems, as Stan indicates below, there is more linking than individuals using 440 for local traffic. 73Greg

1379. Get active.

Yahoo group: laterisersgroup
Date: 2012-07-13 21:35:19 UTC
From: kf5fea
Topic: 1379 Message: 1379

Having seen a few post and heard a few comments on field day and other club activity's lately, I would like to say that consecutive criticism is always welcome and a good way to fix problems or address concerns of club members but it is not enough. If you would like to change something or have an idea for something you would like to see the club do you need to go to board meetings. They are open to all PARK members.
At the board meetings is where you can share your ideas on how to handle problems or express interest in putting on a class or giving ideas for programs you would like to see at the general meetings.
There are lots of opportunity's to run projects or assist someone else running a project. Kip has been very clear about if someone wants to do a project for the club as long as you are willing to lead it the club is willing to back it.
Another good place to share ideas is at the breakfast on Saturday mornings. Both are a good place to sit down and kick ideas around. You can find other people with your interest and have time to talk without the distraction of being on a meetings schedule.It is also a great place to bring a friend who might be interested in getting into ham radio.They get a chance to talk to members in a more relaxed atmosphere.
The club is always looking for volunteers for the good news net. A good place to practice running nets.
If you really want to make a difference in the club get active with leading projects,teaching classes,being a board member, or sharing ideas where everyone can help to make the changes we need to.
I think this club does a great job of putting on lots of events and classes. There are a large number of members who volunteer their time to help others in our club and community. Lets not forget that when the club puts on an event like field day there are a lot of plans, volunteered time, and work done before the event happens.
Thanks to everyone who helps out.
KF5FEA,Rusty.

The Worker - The skills of Young Park (a Hawaii resident)

The workshop - just like yours.....

P51 Mustang

Corsair

Now remember this photo below. The fingers and tweezers.

Using a tweezers, the controls can be moved. All cables and linkages are in place to work the wing control surfaces as well. Young Park has since carved a pilot's face and hands from solid aluminum and built an articulated pilot to sit in the cockpit./(Photo: George F. Lee, Honolulu Star-Bulletin)
/Here's pic of fingers and tweezers to give scale..... Sooooo small!!! Remember this as you look at the pics....All the controls work as designed, by cables, chains, linkages and levers.

All these controls WORK!!!!!..... And that means they work the parts of the aircraft via rods and chains as in the original aircraft!!!! Every single part hand made and fitted. It blows you away, doesn't it???

Don't forget the tiny scale..... Go up again and look at the pic of the fingers and tweezers!

Machine guns and bullets.....Detail of three ..50 Cal. Machine guns and ammo cans.
Ammo cans are loaded outside the aircraft and then simply set into place in the wing.
Their doors become the top surface of the wing. This allowed for rapid reloading by the ground crew.

Mr. Park generously donated the first (cutaway) Corsair model to the Joe Martin Foundation. It can be seen in person in its display at the Foundation's museum in the Sherline building in Vista ,

California .. A collection of photos showing how the model was built and all the historical data on the Corsair Mr. Park collected to build it has also been donated and is available for viewing. In 2005, Mr. Park also donated the second corsair and it is also now on display in the Foundation's museum.

Showing the extent of his carving skills, Mr. Park sculpted a pilot's head and hands out of
solid aluminum. The articulated figure is dressed in a custom made uniform and can be placed
in any position to give a good sense of scale to the model.

P51 MUSTANG

Inside the left wing you can see the .50 cal ammunition threaded into the three wing guns.
Each round is machined in 3 parts?brass cartridge with copper bullet and primer and is
held together with a small copper feed jacket.

Engine exhaust ports..... Pic taken during assembly.

Control wires are being threaded around their pulleys underneath the cockpit during construction. (Y. Park photo)

The radiator air intake sits under the fuselage ready for installation. Much of
the detail of some of the parts is hidden once it is assembled. (Y. Park photo)

The wing being made..... LOOK how SMALL it is

Each panel is hand formed over a wooden shape. The metal is annealed to the proper softness and then pounded and bent into shape.
The plane is made up of many individual panels, and the fits between panels are just about perfect. (Y. Park photo)

Here we see the panel above in it's final position. Looks easy now, doesn't it? (Y. Park photo)

The form for the air intake and the final part. As is often the case in machining and model making, fixtures, moulds, formers and jigs to make the final parts can take a long time to make and are never seen by the public viewing the finished model. (Y. Park photo)

It took me 5 minutes to tie my shoes this morning.

I joined I'm going to do things because I like to facilitate our group having fun, learning new things, and making friendships. For me I get the opportunity to hang out with some really cool people and and get motivated to try new things.

I feel that field day went very well because so many people helped out starting months before the event, during and after the event. Not everything was perfect but it went very well. It is because of all the help that I am really looking forward to next years field day.

The point is that volunteering to help with different events is rewarding in itself and should be the reason why anybody will volunteer. You will always get something positive out of the experience.

1386. Very Short Time Awards

Yahoo group: laterisersgroup
Date: 2012-07-21 17:34:49 UTC
From: K5HM
Topic: 1386 Message: 1386
Attachments: 2 described; binary payloads are missing from this source WARC

For those of you that are interested in awards and read my last post on Awards you can get, the web site, http://www.dxawards.com/REALSHORT.htm gives a listing of awards you can earn quickly. My personal favorite is: Grateful Russia to the Heroes of 1812 award.

This award is a special plaque sponsored by the Club of Radio Fans Power Engineering Specialists of the MEI Smolensk Branch. This award is really easy to earn; you just need one contact from the U.S. to R1812SM

CIS countries and foreign countries for contacting stations of the Smolensk region during the period from August 1 to August 31, 2012. You may use modes of CW, SSB, RTTY, PSK and all bands (including WARC). Amateur stations on all other continents need one QSO/SWL with memorial radio station R1812SM, or three radio stations of the Smolensk region. QSL are not needed to earn the award. Claimed Contacts with R1812SM will be verified.

Wait, this is the best part . . . The award is a plaque (not a certificate) To get the plaque, for radio fans/observers of CIS countries and foreign countries - - equivalent of $US20. The plaque is all in Russian, except for your call sign of course. For a picture of the plaque, visit http://smolradio.ru/index/gerojam_1812/0-344. Also doubles as a paper weight or coaster.

You can't make this stuff up. I gotta have one.

This is incredible, but no ham radio?

73.
Stan NW5Q

The Germans once again with extraordinary technical abilities and exceptional detail
have spent more than 500,000 hours in Hamburg and created this miniature world.
This several minute video has everything from planes, trains, fires, accidents, couples making out in the forest, dead bodies in creeks, etc.,

Only the Germans.....Click below and enjoy 5 minutes of extraordinary detail.

From: K5GTX
Topic: 1392 Message: 1392

I need a topic for tomorrow night's technet.. Any Suggestions? I know it is hot, but..

Also, I want to set the Park in the Park for August - I was envisioning something indoors, like a kit building event or hands on demo or something else? Or maybe a class on some digital mode? Ideas???

Thank you for your help! And please check into the net at 9:00 pm tomorrow night!

I would like a hands on instruction on soldering connectors on coax. I have a 40' coax that I need connectors on, and the last times I tried, everything began to melt when I put connectors on. Got a little heavy handed with the soldering iron. I'd like to do this inside somewhere cool.

A topic could be how and what to say when on HF when contesting, rag chewing, etc., and Q codes and when and what to say for a lot of us who haven't picked that up yet. For new hams and not so new ones.
Perhaps what ever got worked up could be written up and emailed to everyone. Just a thought.

Subject: [McKinneyARC] CAR PORT SALE THIS SATURDAY

Hi all,

Well, in preparation of clearing most of my shack planning for a move, I was all set up in the North parking lot last Saturday according to the MARC announcement and had no idea that the group went somewhere in the East parking area of the college. Anyway, my car is still consumed with all the items I had for sale and I plan to unload them this coming Saturday in my car port at 9222 Olive Street (South of Princeton) in the Branch area. Olive Street in off of CR 546 just North of the 546 & 3286 intersection (near the Branch Store). The sale will be from 9 AM to 11 AM.

What I have for sale are several VHF and UHF radios- 2M, 220 MHz, & 440 MHz. Plus some HF accessories and a large variety of misc. electronic gear plus about 100' of new 9913 coax on the original roll.

I'll have my handheld on the MARC repeater for any directions needed to my place. Or you can call me on my cell phone at 972-732-2113 should you have questions.

Looking forward to seeing you Saturday, 73,

Don Fuller, WA6EE

1402. Frisco Sci-Tech Center

Yahoo group: laterisersgroup
Date: 2012-07-31 03:05:08 UTC
From: Kipton Moravec
Topic: 1402 Message: 1402

I am back in town and need to get back to install the bracket for the tower at the Sci-Tech Center in Frisco.

This is a joint project between PARK and MARC.

The mount is a saddle type, custom made. The inside part is installed, the outside needs holes drilled through the precast 9" wall, from the outside and the metal meeds to be moved in place, and bolted to the wall.

We have a lift so we can get to it on the outside to drill.

I need at least 6 more people.

I am thinking of starting at 6:30 a.m. so we can get done before it gets too hot. I would like to be done by 10:00 a.m. this Saturday (August 4)

If you are able to help, contact me as soon as possible at kip@...

Thanks,
Kip

Gary and all,

Here are the directions to the Sci-Tech Discovery Place in Frisco. Take Dallas tollway North to Cotton Gin Road and exit there. On your right, there you will find Sci-Tech. The entrance is over to the right of the buildings, as best as I can recall. There is a Google map link at the bottom of this email.

Hope this helps,

So my friend Bill gets this e-mail from someone who has obviously hacked
someone's e-mail account.

The first e-mail:

```
>
>
>hello,
>
> I'm writing this with tears in my eyes, I came
> down here to Madrid Spain for a short vacation
> unfortunately we were mugged at the park of the
> hotel where we stayed. All cash,credit card
> cell were stolen off me but luckily for us
> we still have our lives and passport safe.
>
>I've been to the embassy and the Police here but
>they're not helping issues at all, Our flight
>leaves in less than few hours from now but we
>are having problems settling the hotel bills
>and the hotel manager won't let me leave until i settle the bills
>
>I'm freaked out and i need your urgent help with (2,000euro)
>
>-------------------------------------------------------
>Greg Chartrand - W7MY
>
```

And then, Bill's Answer.

Greg,

Wow, are you in luck today!!
We are also vacationing in beautiful Madrid and
visiting my brother-in-law, Iggy Consido. He
just happens to be the Director-General of the
CNP (the national police). Tell you what. It's
late tonight, but meet us at CNP headquarters at
8am tomorrow morning and we'll see what we/he can
do to help you out. At the front counter, ask
for the office of Director Consido. We'll be waiting for you!

73! Bill

I have a safety harness I will bring for the man-lift, but anyone who has their own and would like to operate the lift is more than welcome to bring it. Hard hats are always a good idea especially if you are working the ground crew.
We will need to back the lift over the curb to get it in position (it isn't self propelled) so we will need boards to stack at the curb.
I will bring the water left over from field day. We have about 2 cases left. More drinks might be a good idea.
The lift needs to be back by noon, so we will need to leave by 11:00am with the lift. Hopefully we will have the job done before then.
Remember to drink lots of water tonight.
KF5FEA,Rusty.

1423. loaner radio proposal

Yahoo group: laterisersgroup
Date: 2012-08-05 03:26:51 UTC
From: wganz@texoma.net
Topic: 1423 Message: 1423

Problem:
We get about four new HAM radio licensees per monthly meeting but only one returns.

Discussion:
I've seen a number of these new HAM 'operators' with HT's and this could be part of the problem in that they're not able to talk to the world as they're led to believe. Articles I've read indicate a significant number of people are getting HAM licenses for emergency purposes which is why they get the HT's to hear the weather reports and to generally communicate after a severe storm incident. There is a considerable let down when they're not able to hear or talk with the entry level HT's.

Recommendation:
My recommendation is to kick start these new HAM operators with a loaner 2 meter set up to get them more involved. Currently am getting four older 2 meter mobile rigs to make a complete usable setup in a box. This would consist of the vintage 2 meter mobile, a power supply, and ladder line antenna with about twenty feet of coax. This older 2 meter mobile ideally would have about 25 watt PEP to enable them to successfully participate in both the simplex and duplex nets on Wednesday and Thursday nights respectively.

The older units are to be functional without significant machinations to turn on and change frequency as required. These units should be already set up for the club's repeater. A cheat sheet for each radio should be in each box. Each box would be clearly marked as club property and since they're older won't be as attractive for them to keep. Something could also be put on the lid as a reminder to return to the club in six months.

Had thought of getting labels from both Texas Towers and Main Trading Company to put on the sides as free advertisement for these local firms to pay them back for the favors they've done for the club over the years. Plus, this would be a reminder for the person to get their own rig and would be a visual of what would be required to get them operational.

Current Status:
I've got a Kenwood 9130 already and the USPMO has been sent to get an ICOM 27H. Searches of QRZ.com and QTH.com have been done to find two additional radios. These two radios will be bought as the extra hours come available at the hospital for me to work.

Where I'm requesting help:
The boxes to put them in.
* My preference is to have all of them in the same box for a uniform and more professional appearance.

* If anyone has set up a similar box, I'd like to get their input on what box to get and their assistance in assembling them once all four radios with the necessary other parts are in hand.

The ladder line antenna:
* My preference is to have a rollup ladder line antenna with the coax attached to reduce the part count and reduce having parts go missing. This antenna ideally would be tuned for the club's repeater frequency. It is my opinion that if our club is providing the radio setup, then having everything set to our frequency isn't necessarily a 'bad thing'. Having the antenna already attached to the radio, the new user then only has to open the box, uncoil and hang the antenna, plug it it, and would be on the air with us.
* If anyone is proficient with making and tuning a ladder line antenna, I'd like to get a list of material required so that I can procure it to have them made up.

Please post any comments, suggestions, idle thoughts, or other input that would help get this project into full swing. Also cross posted in the club's forum.

First thing I did when I got my tech was to buy an HT with a mag mount antenna and put it in the car. With the Plano repeater, I got plenty of coverage with 5 watts.

You just need something other that a rubber duck antenna. For just a few $$ they could be growing into active members. A mag mount or even a J-pole antennas is the simplest thing they can do. Think of the satisfaction they will get of having accomplished something on their own.

No need to go to all the trouble to loan them a station in a box, when they could be learning themselves how to set up a station. What they need is experience an a coach to guide them. If you just lend them something they don't understand they will quickly lose interest when the loaner period is over. Give them a challenge that is within their grasp and they will be excited.

IMHO new guys need to get on the path to General and Extra right away. Don't let them lose the momentum of studying. If you want to get these guys excited about ham radio , let them work some DX one afternoon. Invite these guys to a PARK in the Park and set up a portable HF station.

Will,

As the first recipient of your loaner, I would like to thank you for letting me use your radio for a couple of months. It allowed me to get on the air fairly quickly and start to get to know more people in PARK.

From my perspective, I do not know if this has to be as complex as you indicate right off the bat. Your vision is a good one and you could grow and evolve the set-up for the rigs over time into that fully-ready, fully-mobile, bug-out box type loaner rig, but just having a radio, power supply and an antenna for a new member to use for a short time would be a worthy and valuable endeavor.

Although I know you already have the 3 items listed above for the first rig, there is even something to be said for the loaner not being a complete rig. That way the new member would have to think about and plan for what they need to get going. When you loaned me the radio in June, I had to think about next steps and figure out what type of power I needed and what type of antenna to get (or make). A helping hand is great, but having to struggle a little bit never, ever hurt anybody (giving a fish versus teaching to fish, if you will).

Separately, I do not know if we have that many new members each month who are in need. That seems high to me from my short time in the Klub. Maybe someone else knows more about how many new members we get each month for which a loaner rig might be of value.

73,
Mike

I had three thoughts...

"peak" power measurement on AM?
Once the carrier hits, I thought it just stayed there.

Would it work on SSB?

How much?

My dad's looking for some extra power to work from Alaska and the
workmanship in that little box was impressive.

Better yet, put a steel cable through some lanyard hole on the radio and
on there, put an etched steel dog tag with Ownership info, and Elmer info.

This way, they know who to give it back to, and if they have a question,
there's a contact phone number on there for them to call, about anything.

And I say steel so it's actually annoying and forces them to deal with
the Elmer info. :) Plus it makes the loaner radios easy to spot.

You can put retailer info on the back as well.
Heck, I bet MTC would sponsor a couple of the 2m HTs just for this with
their contact info on the back.

Set up the radio with all the local repeaters, as well as 2m CALL
pre-programed into the memories, and simple instructions on how to turn
it on, change frequencies, and how to set it to scan.

This gets them started, listening, eventually calling, conversing, and
then, when they want to get their own, they have phone numbers for two
people- to buy it, and help program it.

Paris, Texas that is.

Two weekends from now. The 18th of August. The iron horse(aka da' Jeep) will depart from Poor Richard's cafe promptly upon completion of breakfast, draining of bladders & filling of gas tanks, topping off of thermos, and other needed preps to get us from Plano to Paris then back. The target is the Main Trading Company which advertises that they close at 1PM.

There are seats for three other Fellow Adventurers.

DISCLAIMER - Permission slips from spouses are not required. There will be plausible deniability for anything that is inside of a shopping bag. All receipts/invoices/sales slips must be destroyed prior to return to Plano. And the phrase must have practiced and able to recite with a straight face, "No Honey, that old radio has been there for months."

General e-mail etiquette is that you post the photos somewhere and then provide a link to let people go look at them - IF they are so inclined.

Not everyone has megafast bandwidth, nor do they have e-mail providers that will accept huge e-mails (if they don't classify them as spam first), OR they are using mobile devices and have to worry about every kilobyte that comes down because of their data cap and overages, and then you are making people wait for their mail program to download a "large e-mail full of images" without asking them first.

Like with everything else... ask first.
Or just point and say, they're over there if you wanna look.

From: Anthony Burokas
Topic: 1444 Message: 1444

I have a White Mountain SSB radio that I think is under performing, but I have neither the technical know how to test it accurately, or the time to learn how to do it with the certainty that I would like.

If there's a Small Wonder Labs fan out there who could lend a hand and go over the radio, make adjustments, etc. I have the radio and the manual, and even parts from a second radio.

Let me know.

Thanks!

Mr. Burokas,

Thanks for bringing this to my attention and I'm sorry if the offending email was too large.... but the pictures were scaled down from 70 megabytes to 4 megabytes. I can just imagine your distress if I had sent the photos in their original sizes!

On the subject of general etiquette, if I had a beef with someone, I wouldn't conduct it in this forum, I would go to the person and discuss it privately, either in person or personal email.

If you were to withdraw from the laterisers group, then you probably wouldn't get those photos in your email. I don't have a beef when some of the others send multiple photos.

My daddy once told me if you go around urinating in everybody's boots, after a while, there won't be anymore boots around to urinate in.

Have a great day and may God bless.

1446. My note about posting etiquette

Yahoo group: laterisersgroup
Date: 2012-08-07 19:47:01 UTC
From: Anthony Burokas
Topic: 1446 Message: 1446

It's been brought to my attention that my note about posting etiquette may have ruffled some feathers.

I apologize to Michael and the group if my note came across wrong. I've received of a lot of photos of the tower work, from three different senders already, and my cell phone data plan has been blown, so I'm looking at overages.

Because so many people were taking pictures, I felt posting to the list was warranted before _more_ pictures were mass e-mailed. It wasn't meant as a critique of any one individual. I noted what should and shouldn't be done, and why, for the benefit of everyone who isn't on a mega-unlimited everything mobile plan.

Again, apologies if people felt singled out. That was not my intention.

Photos can also be uploaded directly to the group files area, into an album, and then a link to that album can be shared with all. There are several albums there already from Hamcom, field day, and more.

Anthony,

I know nothing of the smart phone or plan you have, but given the limitations you apparently have with your data plan, it may behoove you to explore the e-mail management options on your phone. Though I have unlimited data and don't need to use them, my Blackberry has settings that will allow me to restrict the size of an e-mail to be downloaded, as well putting restrictions on downloading of attachments. The e-mail client on my laptop also allows similar controls. This might prove to be most effective solution to your problem.

1449. Yahoo Group ? [was: etiquette]

Yahoo group: laterisersgroup
Date: 2012-08-07 23:30:45 UTC
From: mwriedel2002
Topic: 1449 Message: 1449

Perhaps a solution to being overwhelmed with emails containing picture attachments would have been to set up a Yahoo Group for the Antenna raising at the FSC, even if it was only for what we perceive as a one-time project.

We could then have uploaded the pix; participants could have viewed them online and downloaded the ones of interest.

It would have also provided us with calendaring reminders, etc.

This group already provides calendaring, and creating photo albums for anyone to view can be done by anyone at any time, and no one gets notifications about the albums unless they are manually sent out.

And that's the point. Creating an album and then sending a link means the 43 members of this list (really, only 43?) don't have to each configure their mail programs to handle a constant barrage of what they didn't ask for.

It's just more proper to either ask first and then sent the photos direct to those who want them, or create an album, and then send an e-mail to the list announcing that the album is there for those who want to view it.

Think of it another way, if everyone still had fax machines, would it be apropriate to send all 61 images as a 61-page faxe to each and every member overnight?

Would a "most effective solution" be to tell those who didn't ask for he 61 page fax, to go and change the settings on their fax machine to avoid such long unwanted faxes in the future?

Or rather should we use the tools we have so that as many nice big images can be uploaded, by whomever wants to add to the album. Then it's easily visible for those who choose to go see it, when they are ready to go see it, using the tool best suited to the task (a computer on broadband instead of a cell phone.)

Plus, the album stays there, much more easily findable years down the road.

That this club already has a separate Field Day group, ostensibly to keep list members from gatting too much unwanted mail.

And that's my point.

At my previous club, we purchased several 2m HTs specifically s loaners. We sold the lithium in batteries they came with to defray the purchase cost. We included an AA battery holder, this way there was no charger to lose and powering the device was the responsibility of the borrower. We loaned them out a month at a time, requring the borrower to return to meetings to re-borrow or return the radio, or else another club member would drop by for a casual visit and to pick the radio up. :)

Anthony,

You labor under the misconception that this group is affiliated with
PARK. It is not.
This is the group for folks who go to breakfast at Poor Richard's Cafe
on Saturday morning.
Yes, many of us are PARK members, but neither the Plano Klub nor its
Board has any say
or control over this group. That's also why there are only 43 members.
PARK does not
have any official Yahoo group other than ones for special interests such
as Field Day, etc. as you mention.

From: K5HM
Topic: 1449 Message: 1457

The group was started and has grown because its members have two things in common: Ham Radio and a good breakfast.

As Stan pointed out, it is not affiliated with PARK although many of its members belong to PARK and was not designed to serve as an official PARK yahoo group. The group has grown from its original three to over forty members, I believe as a result of that and our willingness to place friendship ahead of anything else.

We never intended to have rules about stuff or where it goes. We always expected folks to stick it where they thought it would do the most good. We never worried about offending anyone since we always believed that everyone in the group had good intentions and a thick skin.

This group has always been known for its relaxed attitude and rapier like wit in discussing most topics. And, if anyone didn't quite do it the "right way" well, "c'est la vie". As my old buddy Ralph says, "Listen Kid (everybody is a kid to Ralph), life is too important to be taken seriously.

No matter how right one may be and now matter how often you may try to convince all you are right, people will do what they want to do anyway. I believe this topic has gotten too serious. So, my suggestion is to close the book on this and move on.

And, if if I ever feel the irresistible urge to post a full text copy of the Magna Carta or the Texas Constitution I will give you all a heads up in case you are worried about cell phone data overages.

In deference to members who may have such concerns, you do have the ability to edit your laterisers membership profile so that you do not receive e-mail notices. Then you can read the laterisers group posts on your web browser from home and not worry about data overages on your phone.

Dan,

You don't have to leave. Most of our members are PARK members. We just get together for breakfast and conversation on Sat. Morning.

If you haven't been to a breakfast meeting, you are certainly welcome. Since you are newly licensed, you might enjoy meeting the group folks in person. We are always happy to help a newcomer to ham radio. One of the biggest problems new hams have is getting connected to a group of people with similar goals. We all want to help you grow in the hobby.

In any case, what could it hurt? The food is good and the enjoyment is free.

1463. MARS DXPedition

Yahoo group: laterisersgroup
Date: 2012-08-09 20:04:44 UTC
From: K5HM
Topic: 1463 Message: 1463
Attachments: 2 described; binary payloads are missing from this source WARC

Late word has just been received that MARS has been approved for DXCC credit following the successful landing of the MARS Curiosity Rover The ITU has issued the prefix, LGM0 (little green men), although no one on MARS has been reached that can issue a license at this time.

Check out the photo in the link below. According to the Southern California DX Association, MARS represents the ideal DXpedition site: No Food, No water, No shelter and no antenna restrictions. Funds are being raised to send a dxpedition at the earliest possible moment. The US government has agreed to the use of a volunteer guide, Mr. Zork Arghh, who landed here some years ago and has been living in government housing at Area 51 for sometime.

The New Mexico Amateur Radio society reports that Mr. Arghh passed his Extra Class exam some years ago but his call sign has been redacted from the FCC ULS database for security reasons. And besides, no one can pronounce his real Martian name. Zork is apparently excited about going to MARS but plans to return to earth when the DXpedition is over. When reached for comment, he said "zoop beboop gratch qwnz BigMac grzopl qwxchty and Fries zipzap."

Film at 10.

73,

Ron, K5HM

Crater Vista

08/09/2012 12:00 AM EDT

This is the first 360-degree panorama in color of the Gale Crater landing site taken by NASA's Curiosity rover. The panorama was made from thumbnail versions of images taken by the Mast Camera. Scientists will take a closer look at several splotches in the foreground that appear gray. These areas show the effects of the descent stage's rocket engines blasting the ground. What appeared as a dark strip of dunes in previous, black-and-white pictures from Curiosity can be seen along the top of this mosaic, but the color images also reveal additional shades of reddish brown around the dunes, likely indicating different textures or materials. The images were taken on Aug. 9, 2012, by the 34-millimeter Mast Camera. This panorama mosaic was made of 130 images of 144 by 144 pixels each. Selected full frames from this panorama, which are 1,200 by 1,200 pixels each, are expected to be transmitted to Earth later. The images in this panorama were brightened in the processing. Mars only receives half the sunlight Earth does and this image was taken in the late Martian afternoon. Image Credit: NASA/JPL-Caltech/MSSS

For anyone interested in cheap SDR, and a cool site in general,
http://hackaday.com/2012/03/20/software-defined-radio-from-a-usb-tv-capture-card/
It details how to build an SDR for 64-1700 MHz for around $20 using a cheap Chinese USB capture card.

And back because it's so hilarious, The Basic Fundamentals of Electricity video. In it, you can learn about the early pioneers of electricity who became household names; people like James Watt and Bob Transformer.

HF Operation Basics - 2pm August 25, 2012 - Lucas

If you are a new ham, or new to HF, you will find this seminar helpful. This will be an interactive session covering:
Solar Activity, Solar indexes, Propagation and Basic Propagation Tools, 6 Meter Weak Signal Activity, Internet Tools,

Tips on Finding and Working DX, The DX Code of Conduct, HF Operating Tips, Logging and Logging Programs, QSL Cards,
Electronic QSL's, and how to confirm your contacts.

73,
Stan
NW5Q

The Lucas Fire Department is located at:
165 Country Club Road
Lucas, TX 75002

1497. K5P Special Event Station during Plano Balloon Festival

Yahoo group: laterisersgroup
Date: 2012-08-19 03:23:52 UTC
From: Michael Payne
Topic: 1497 Message: 1497

Come one, come all! Come and signup for the 2012 K5P Special Event Station during the Plano Balloon Festival. We would like to invite you and other licensed Amateur Radio Operators to have fun operating the K5P special event on September 21-23, 2012. This is being put on by Plano Amateur Radio Klub (PARK) and McKinney Amateur Radio Club (MARC). Both clubs will be participating in the joint effort and a good time will be had by all! An online signup sheet will be on the K5P Yahoo Group. Just go to Yahoo Groups and search for K5P. The K5P event will run from 4:00 p.m. on Friday, September 21st until the station shuts down at 12:00 p.m. (Noon) on Sunday, September 23rd. There will also be a signup sheet at the PARK club meeting on Monday night on 8/20/2012. If you are working the PBF, there is also time to work the K5P special event, even if just for a little while.

Please click on the Database link on the left side and then choose the Operator Volunteers database to sign up online for the shift you would like and your contact information.

73,

Michael KE5TJL

1498. Road Trip AAR

Yahoo group: laterisersgroup

From: wganz@texoma.net
Topic: 1498 Message: 1498

Stuart and I departed at 0800 for The Main Trading Company located in Paris, Texas. Ninety miles later we were there at 0920. Found a clean well stocked store there.

Scored a Wouxan KG-UVD1P for $119 which is the Internet advertised price. Plus got some other goodies along with a MFJ power supply and exchanged the 5/8th wave 2 meter mag mount antenna that had 'issues' without a quibble towards a Comet 5/8th wave NMO antenna. Spent about an hour there.

I was satisfied with dealing with them and can recommend them to others. They had a demo Wouxan dual bander mobile there and the owner, Richard, said that the new units will be somewhat under the $299 intro price and may be down to $250 though this isn't set in stone until the units start shipping. We made it back to Plano in almost exactly 4 hours from the time we left.

1499. Re: [laterisersgroup] PARK HF Operation Basics Seminar Saturday Aug 25th

Yahoo group: laterisersgroup
Date: 2012-08-19 20:54:55 UTC
From: Michael Long
Topic: 1490 Message: 1499

Just FYI...

For making your way to and from the HF Operation Seminar next Saturday, 25 Aug, please be aware that there is fairly major road construction on Bethany at Angel Parkway (FM2551). On a Saturday at about 2pm the construction slow down may not be too bad but there is always the possibility of a slow down or a closure. Fortunately, there are alternate routes to the firehouse.

The construction is at point A on this map. The firehouse is point B on the map if you zoom out.
https://maps.google.com/maps?saddr=Co+Rd+263%2FW+Lucas+Rd&daddr=Country+Club+Rd%2FFarm+to+Market+1378+S&hl=en&ll=33.085825,-96.619992&spn=0.012207,0.021307&sll=33.069607,-96.616945&sspn=0.048838,0.08523&geocode=FYLY-AEdXLI9-g%3BFT_b-AEd7iM--g&t=h&mra=dme&mrsp=0&sz=14&z=16

You can take McDermott east until it ends at Country Club. Turn south/right on Country Club and the firehouse is just a short drive south.

https://maps.google.com/maps?saddr=Farm+to+Market+Rd+2170%2FW+McDermott+Dr&daddr=Country+Club+Rd%2FFarm+to+Market+1378+S&hl=en&sll=33.088378,-96.612911&sspn=0.097656,0.17046&geocode=Fd4X-QEddNI8-g%3BFT_b-AEd7iM--g&t=h&mra=dme&mrsp=0&sz=13&z=13

If you are coming from East Plano or Parker, use Stinson to come north to Bethany instead of FM2551. The map starts on Parker Rd near Southfork Ranch just past FM2551.

https://maps.google.com/maps?saddr=Farm+to+Market+2514%2FE+Parker+Rd&daddr=Country+Club+Rd%2FFarm+to+Market+1378+S&hl=en&ll=33.061335,-96.617374&spn=0.097686,0.17046&sll=33.066658,-96.608963&sspn=0.09768,0.17046&geocode=FWpi-AEdCfY9-g%3BFT_b-AEd7iM--g&t=h&mra=dme&mrsp=0&sz=13&z=13

Hope this keeps you from getting caught in construction traffic on Saturday.
If you need help figuring out how to get to our little firehouse here in Lucas, please don't hesitate to ask.

Mike

Subject: [laterisersgroup] K5P Special Event Station during Plano Balloon Festival

Come one, come all! Come and signup for the 2012 K5P
Special Event Station during the Plano Balloon Festival. We would
like to invite you and other licensed Amateur Radio Operators to
have fun operating the K5P special event on September 21-23, 2012.
This is being put on by Plano Amateur Radio Klub (PARK) and
McKinney Amateur Radio Club (MARC). Both clubs will be
participating in the joint effort and a good time will be had by
all! An online signup sheet will be on the K5P Yahoo Group. Just
go to Yahoo Groups and search for K5P. The K5P event will run from
4:00 p.m. on Friday, September 21st until the station shuts down
at 12:00 p.m. (Noon) on Sunday, September 23rd. There will also be
a signup sheet at the PARK club meeting on Monday night on
8/20/2012. If you are working the PBF, there is also time to work
the K5P special event, even if just for a little while.

Please click on the Database link on the left side and then choose
the Operator Volunteers database to sign up online for the shift
you would like and your contact information.

73,

Michael KE5TJL

1511. FCC Releases Recommendation on CC&R's

Yahoo group: laterisersgroup
Date: 2012-08-21 15:40:46 UTC
From: Stan
Topic: 1511 Message: 1511

The FCC just released its report on antenna restrictions. No big surprise, they recommend doing absolutely nothing.

http://transition.fcc.gov/Daily_Rele...-12-1342A1.pdf
<http://transition.fcc.gov/Daily_Releases/Daily_Business/2012/db0820/DA-12-1342A1.pdf>

The conclusion of the report reads:

3. Recommendations

39. Private land use restrictions. Some commenters recommend that CC&Rs be preempted if they prohibit antennas that are within certain limits. Others suggest that private land use restrictions on amateur antennas should be permitted only for safety considerations, and not for aesthetic reasons. As noted above, however, other commenters believe that it is not necessary to preempt private land use restrictions in order to promote amateur emergency communications, given the ways that even amateurs subject to CC&Rs can communicate effectively and the nature of amateur emergency communications. MMoreover, while commenters suggest that private land use restrictions have become more common, our review of the record does not indicate that amateur operators are unable to find homes that are not subject to such restrictions. Therefore, at this time, we do not see a compelling reason for the Commission to revisit its previous determinations that preemption should not be expanded to CC&Rs.

40. Other impediments. As noted above, the Commission has already preempted state and local regulations that do not reasonably accommodate amateur radio communications and do not represent the minimum practicable regulations to accomplish the local authority's legitimate purpose. The Commission has also addressed regulations regarding possession and operation of amateur radio equipment while driving. Commission rules that may be an impediment to enhanced amateur service emergency communications can, as the ARRL notes, be considered through the Commission's rulemaking process. Consequently, we do not believe that Congressional action is necessary to address any of these issues.

IV. CONCLUSION

41. The amateur radio community and the emergency response and disaster communications communities all agree that amateur radio can be of great value in emergency response situations. Amateur radio carries with it a wide range of advantages that allow it to supplement other emergency communications activities during disasters. This has been demonstrated time and again in a wide

variety of emergency and disaster situations. Amateur radio emergency communications require not only stations in a position to originate the emergency message, but also an alternative to the commercial communications infrastructure impacted by the emergency. This alternative infrastructure is the network of amateur radio operators and their stations that relay messages, build and maintain repeater stations and repeater networks, operate HF message networks to send messages greater distances than are practical with mobile or transportable transmitters, and develop new technologies to improve the reliability of these networks.

42. That value could potentially be increased, however, through cooperation among DHS, public safety, emergency management <http://forums.qrz.com/#>, and amateur radio emergency communications associations and groups to develop future training protocols. We also recommend that DHS work with state, local, and tribal authorities to develop disaster area access policies and qualifications for trained amateur operators who provide emergency communications support.

1512. RE: [laterisersgroup] FCC Releases Recommendation on CC&R's

1513. FW: [BVARC] FW: [laterisersgroup] FCC Releases Recommendation onCC&R's

Yahoo group: laterisersgroup
Date: 2012-08-21 19:19:41 UTC
From: K5HM
Topic: 1513 Message: 1513
Attachments: 2 described; binary payloads are missing from this source WARC

What we all should have learned by now, after many years of obfuscation from the FCC and the state legislature is . . . that it is all about the money, honey! You have got to pay to play.

Unfortunately like some other groups of which I am familiar, we are notoriously disparate. The collective Ham attitude is generallyone of, if the problem doesn't affect me directly then it is not my problem. The result is that interest groups like developers, commercial radio interests and HOA's get to pick us off like clay pigeons.

The Texas legislature meets only once every two years. That is our best hope. Regrettably, in spite of the best efforts of the Texas Ham Pac, the results in the last session were, glacial in progress. Yes we got the right to put up a vertical if we don't call it an antenna. That's like don't ask don't tell.

The fact is the legislature is solidly in the pocket of developers ,real estate interests, etc. They do not give a damn about the community after they leave it. Most professionally managed HOA's want to create the image that they are preserving the value of the community so developers will choose them for future projects.

After this year's hamfest, I sought out my District Representative, Dwayne Bohac and tried to volunteer. He never called me after repeated tries, I went to his web site to learn that he is endorsed by every developer, builder and Realtor in Harris county!

So then I went to try and hook up with Senator Dan Patrick, a Tea party member and staunch conservative is likewise hooked up with the same crew. You would think as a conservative who claims to promote self reliance and neighbor helping neighbor, he would be all in for EMCOMM. Good luck with that. Again no response.

Ok, so I went for the non-incumbent Republican in the primary, who got slaughtered. I even thought about voting democrat until I saw Bohac's opponent, The guy was a nut job.

I regret that unless, the Ham community gets behind the PAC with some big money; starts thinking about ALL of us and not just those guys that are stuck with the CC&R problem, no significant progress will be made in my lifetime. Too bad. Just remember that even though you don't have a CC&R problem, there will always be something else you can get picked on about.

For all the time, I can remember, hams have been practically invisible except during a disaster. Then we are needed. 5 days later we fade to

black. We need to get busy in our communities and sell the idea that hams are indispensible. We have to be omnipresent not just present. It all about the marketing and marketing takes continuous effort.

Until Hams can come out of the closet, I will be developing my 10 element 5 band invisible Yagi. Which is actually made from the structural members of Wonder Woman's invisible plane. I just took delivery on my Ronco Inflatable Antenna Mast with RDF (rapid deflation feature).

39. Private land use restrictions. Some commenters recommend that CC&Rs be preempted if they prohibit antennas that are within certain limits. Others

suggest that private land use restrictions on amateur antennas should be permitted only for safety considerations, and not for aesthetic reasons. As noted above, however, other commenters believe that it is not necessary to preempt private land use restrictions in order to promote amateur emergency communications, given the ways that even amateurs subject to CC&Rs can communicate effectively and the nature of amateur emergency communications. MMoreover, while commenters suggest that private land use restrictions have become more common, our review of the record does not indicate that amateur operators are unable to find homes that are not subject to such restrictions. Therefore, at this time, we do not see a compelling reason for the Commission to revisit its previous determinations that preemption should not be expanded to CC&Rs.

40. Other impediments. As noted above, the Commission has already preempted state and local regulations that do not reasonably accommodate amateur radio communications and do not represent the minimum practicable regulations to accomplish the local authority's legitimate purpose. The Commission has also addressed regulations regarding possession and operation of amateur radio equipment while driving. Commission rules that may be an impediment to enhanced amateur service emergency communications can, as the ARRL notes, be considered through the Commission's rulemaking process. Consequently, we do not believe that Congressional action is necessary to address any of these issues.

IV. CONCLUSION

41. The amateur radio community and the emergency response and disaster communications communities all agree that amateur radio can be of great value in emergency response situations. Amateur radio carries with it a wide range of advantages that allow it to supplement other emergency communications activities during disasters. This has been demonstrated time and again in a wide variety of emergency and disaster situations. Amateur radio emergency communications require not only stations in a position to originate the emergency message, but also an alternative to the commercial communications infrastructure impacted by the emergency. This alternative infrastructure is the network of amateur radio operators and their stations that relay messages, build and maintain repeater stations and repeater networks, operate HF message networks to send messages greater distances than are practical with mobile or transportable transmitters, and develop new technologies to improve the reliability of these networks.

42. That value could potentially be increased, however, through cooperation among DHS, public safety, <http://forums.qrz.com/> emergency management, and amateur radio emergency communications associations and groups to develop future training protocols. We also recommend that DHS work with state, local, and tribal authorities to develop disaster area access policies and qualifications for trained amateur operators who provide emergency communications support.

Find an empty frequency near by, reduce power to maybe 10 watts and tune up. Identify yourself as required by the regs. When you are done QSY to the station yu want. BTW, if its DX, you might want to listen first to see if the DX is operating split. Usually they'll say Up 10 or something like that. That keeps the DX freq clear so you can hear if he comes back with your call. Of course there are those who just jump in like dimwits and QRM the DX.

There is an idiot in every pileup.

1535. Tesla.

Yahoo group: laterisersgroup
Date: 2012-08-27 23:48:51 UTC
From: kf5fea
Topic: 1535 Message: 1535

I saw in the news how they have raised funds to turn Tesla's old building in New York into a museum. It's great that they are doing that for Tesla. He didn't get enough credit for his vision in his time.
With that said I think it might be time to honor a local hero who didn't get the recognition that he deserved.
I'm talking of a man who's last name is known to everyone in the world of electronics. Most people who don't know electronics have also heard his name but don't know who he is. Our lives would not be the same without him.
I'm talking of course of Bob Transformer. Won't you help me in setting up the proper museum fitting of a man of his caliber? I will start scouting out some land to develop for this project.
I will keep you posted. Long live Bob Transformer!

We didn't really cover it Saturday, but tuning up on 20 meters is sort of special. You can just tune to 14.313, crank up the power to max and take your time getting things to tune.
It can be a challenge to get things properly tuned, so don't feel bad if it takes several tries to get it right. ;-)

Nice to see the interior cabling coming along!

Actually, I took the first 160 images or so, but you can probably throw
60% of those away- dupes, out of focus, etc. And keep the "good ones."

1546. An interesting post

Yahoo group: laterisersgroup
Date: 2012-08-30 15:55:57 UTC
From: K5HM
Topic: 1546 Message: 1546

Came across this post on a PSK reflector:
When I begin a QSO, my power will be at about 40w but by the end of the exchange, I have dropped to 20w and have to increase the volume to get back to 40w.

Any ideas on what is happening here?

And the response:
Try holding your breath during when transmitting. The power level should remain constant.

I really, really, really want one of these..... it would be nice to have in traffic! I'll buy the future HT if they can keep the specs the same.

Michael
KE5TJL

/*baojie bj uv55 mobile two-way radio, dual band mobile base radio, 45w dual band mobile radios */

Multiple Function VHF/UHF Dual Band Vehicle Radio
Frequency range: 136-174/400-470MHz
Output Power: VHF:45W/UHF:35W
128 memory channels
Dual frequency display
DTMF signaling system
50 Groups CTCSS and 105 Groups DCS
Wide (25KHz) and Narrow (12.5KHz) selectable
Setting FM radio
All calls, group calls and selective calls
Inspection, Monitor, Stun and Kill
Communication through repeater
U/V inter-band communication
Distant urgency alarm
ANI code switch
Busy channel lockout
3 kinds of scan mode
Mute mode
DTMF sidetone switch
Weight About: 1200g
Dimension: 160*43*137mm (projection not included)

Transmitter
RF output power VHF 45W/UHF 35W
Spurious and harmonics 70dB
Modulation Wide: 16K0F3E Narrow: 11K0F3E
FM Modulation Noise Wide: 45dB Narrow: 40dB
Audio distortion Less than 3%
Frequency Stability ? 2.5ppm
Receiver
Sensitivity(12dB SINAD) Wide: 0.18uV Narrow: 0.22 uV
Selectivity Wide: 70 dB Narrow: 60dB
Inter-modulation Wide: 70 dB Narrow: 60dB
Spurious response 75dB
Audio power output 4.0W/8?
Frequency Stability ? 2.5ppm

General
Frequency range 136-174MHZ 400-470MHZ
Memory channels 128
Bandwidth Wide: 25kHz Narrow 12.5kHz
PLL channel stepping 5, 6.25kHz
Operating voltage 13.8VDC? 15%
Current drain Standby: Less than 0.4A Receive: Less than 1.0A
Transmit: Less than 0.8A
Operate temperature range -- 30? C-+60? C
Weight 1200g
Dimensions 160*43*137mm

$219 is a great price for a dual bander.
The Wouxan dual bander mobile is suppose to be ~$250 when it makes it to
the channel. Wonder if the price will drop even further?

Before you all go sending your money to a foreign country, you ought to find out if the rig has been certified for sale in the U.S. by the FCC.

You want to be real careful about not using the stun or kill feature while driving. It can be very distracting.

1555. Frisco tower project.

Yahoo group: laterisersgroup
Date: 2012-08-31 22:19:31 UTC
From: kf5fea
Topic: 1337 Message: 1555

I talked to Barry today and he is good with September 8th. He said we might need a come-a-long or something like it to pull the tower up. Any suggestions? He is also getting the poles and cable extinctions we need.
Let me know if there is anything else we might need.
KF5FEA,Rusty.

Yup. An HT with 45w 2m and 35w on 440 would be great.
But the battery would probably die quick and it'd get hot as heck.

1566. Route 66 Special Event

Yahoo group: laterisersgroup
Date: 2012-09-05 05:19:08 UTC
From: Stan
Topic: 1566 Message: 1566

Just to let everyone know, the Route 66 special event stations will take to the air starting this weekend (Friday 7pm CST) and going through next weekend.
For those who have never participated, this is a fun event with cool QSL cards and a nice certificate. It is one of my most favorite events of the year.

Swiped this from a qrz.com posting:

The 13th annual /*Route 66 On The Air Special Event is coming September 8-16, 2012 */. This is one of the years best events and this year we will have 17 stations along with 3 rovers. For further information please visit the event's official website at www.w6jbt.org <http://www.w6jbt.org/> and click the Route 66 On The Air link. It will show you how to order a certificate and/or, decal along with QSL information.

Below is a list of the participating clubs:

W6A Santa Monica, CA
W6B Los Angeles, CA
W6C San Bernardino, CA
W6D Victorville, CA
W6E Barstow, CA
W6F Kingman, AZ (additional rover station)
W6G Flagstaff, AZ
W6H Albuquerque, NM
W6I Amarillo, TX
W6J Elk City, OK
W6K Oklahoma City, OK
W6L Tulsa, OK
W6M Riverton, KS
W6N Joplin, MO
W6O Lebanon, KS
W6P St. Louis, MO
W6Q Chicago, IL
W6S ROVER 1 (Arizona)
W6T ROVER 2

Hope to hear you on the air...when you get your "KICKS ON ROUTE 66"

Jeff Richardson, W6JJR
Coordinator, Route 66 On The Air
Hosted by: Citrus Belt Amateur Radio Club
San Bernardino, CA

We can work at Frisco this Saturday. I think we can finish everything this time. We need to finish the cable work inside, tune the antenna, and change the 2 clamps out on the mount.
We can start at 10:00am- after the K5P meeting.
Thanks to everyone who has helped out so far.
KF5FEA,Rusty.

I can't make it. I won't make breakfast, either.
Opening tournament for high school hockey this weekend.

I think we need to change the date so I can be there. :-)
If you need my ladder, I can figure out a way to get it to Damon. I could get it to Scott but I don't think he would appreciate strapping it to the top of his car.

Yahoo group: laterisersgroup
Date: 2012-09-15 23:17:55 UTC
From: kf5fea
Topic: 1337 Message: 1611

Thank you to everyone who helped on this project. It was a huge undertaking and couldn't of happened without all the time and work that everyone put into it.
We got the beam up and tuned. We were able to play with the radio on HF for a short time today. We also have the 2 meter radio working.
I hope having the radio at the Si-tec center helps to inspire some of the kids to go on and become hams in the future.
I really enjoyed seeing all the new hams helping out and hopefully learning a few things about putting up a station. I learned a few things from them as well. Kevin, that ground rod trick is still amazing to me! Thanks once more for all the time and effort that everyone put into this. I will try to keep you posted on when the dedication party will be scheduled.

Wow! It's surprisingly narrowbanded on 20 meters, but looks pretty good on 10 and 15.
Force 12 also claims it will work with gain on 17 and 12 meters with a tuner, but from that plot, I really don't see it.
Thanks for sharing!

Well I came up short, but I got 17 of them. Never could score W6F or W6N.
I heard each of them only once with a weak signal and a huge pileup.
Thought I was going to be
three short, but W6B appeared out of the blue on 15m this afternoon with
a big signal and only modest interest.

Congratulations on the wedding! Guess we won't need to be looking for
you in the TXQP.

Look at this photo. There is something laughable about three guys returning from five months space, landing in a cloud of dust in a remote desert in Kazakhstan near a ghost town. The only thing missing in the photo would be a couple of grazing yaks. Probably no self respecting yak would be caught dead in Kazakhstan.

1624. W6N back on the air 7.266

Yahoo group: laterisersgroup
Date: 2012-09-17 20:36:46 UTC
From: Damon Koch
Topic: 1624 Message: 1624

W6N is back on the air with a new antenna. If you didn't get to work him, he's on 7.266 for the next few hours. Solid S9 signal to Dallas.

73,
Damon K5OCH

Thanks Damon! I tried the Tulsa trick, but he couldn't hear me with the antenna on the ground, so I had to pop it back up.
He was working a whole bunch of North Texas and little else. I heard Scott work him and thankfully my antenna was still on the ground, so he was only S9. :-)
Now if W6F would come back on for the 2 day extension, I might get a sweep.

1632. The Answer was right in front of me, literally.

Yahoo group: laterisersgroup
Date: 2012-09-18 03:56:19 UTC
From: K5HM
Topic: 1632 Message: 1632
Attachments: 2 described; binary payloads are missing from this source WARC

I always had a high noise level on 20M, about S8. I thought it was generic to my Houston QTH. Didn't have it when I lived in Plano.

Tonight I discovered that whenever I fired up Ham Radio Deluxe, the noise level on 20M jumped to S8. When I shut down HRD, the noise level went down to about S1. Tried that repeatedly about 10 times and Voila! Noise up, noise down, Noise up, Noise down. A perfect correlation. I never got the connection before because I usually always have HRD running whenever I start up the rig. And at my Plano QTH, I wasn't running any rig control, DUUUHHH! No wonder.

It is logical to conclude, that the CAT cable from computer to radio is carrying RFI from the PC. So tomorrow, it is off to Ace Electronics for some snap on chokes. I plan to buy out all they have . As the old pill popper once said, " If one is good for you, two is better and five is mellow, man."

And that's the way it is.

Reporting from the Dark Side,

73,

Ron, K5HM

Ron,

Great discovery! I usually run S2-3 on 20 if it's not real noisy.
While a lot of ferrite will help, don't forget that it's actually a
combination of both turns and ferrite.
If you don't achieve success by just snapping on the chokes, you may
want to try a binocular configuration with multiple turns of cable.
It's much more effective for
blocking common mode currents which are probably causing your noise. I
hope you are able to solve your problem. Good luck!

1636. 6M + 2M antenna

Yahoo group: laterisersgroup
Date: 2012-09-19 16:25:42 UTC
From: Damon Koch
Topic: 1636 Message: 1636

The antenna build at the club meeting a while back was a great success. The 6+2 ladder line antenna in the October QST (page 49) would be a great build for a club meeting. We could even change it to a 10 + 6 for HF rigs that need a separate input for 2M. Make doing the math and tuning part of the challenge.

73,
Damon K5OCH

Both FR5HA (Joseph) and FR5MV(Ray) were on 20m PSK tonight Booming in 599 calling CQ USA.

Reunion Island is in the middle of the Indian Ocean NW of Madagascar.

Sounds like a title for an Errol Flynn movie, "Northwest of Madagascar", "Where men take what they want and the women are warm and friendly." - think I'll write a novel.

But I digress . . . Reunion is 10,546 miles from Houston as the crow flies. The Earth is 24,900 miles in circumference so that's almost halfway around the world.

The Gap Titan did the job tonight. Around the world on 30 watts. And for those of you that don't do PSK . . . well, you missed it.

Ron,
Congratulations, that's great!
I won't personally care about psk until they lose the brag button.

Last November, I worked Mauritius on 10 meter SSB - 10,621 miles from here.
Pretty much as far as you can get from Dallas and not get your feet wet
in the Indian Ocean.
100 watts and a wire. Propagation is your friend!

I wanted to drop a short note to say Thank You to all that helped out with the Special Event Station and provided your time and support. And I want to thank the McKinney Club for providing the CSU. I am grateful to all of you for your efforts. I also want to say that all of us that worked the station had a great time. We had quite a number of pile ups and it was great to visit with fellow operators. The Special Event Station is one of the best opportunities for us to learn from each other. It is a great time to share with others how we do things and get feedback. Typically, when we are operating as individuals, we just don't get the feedback that is quite valuable. I for one, learned a lot about technique from both Stan and Ron. And there was no other way I was going to get the experience, except by working side by side with them. And yes, my wife and I worked a lot of PSK and had several pileups. It was so exciting to have multiple calls coming in without having to CQ. The October issue of QST has a very interesting article that asks a very simple question: 'Yes, but did you make any friends today?' I, for one, know that I did! 73 to all,Greg EvansK5GTX

I agree with everything you said. As a newbie, there is so much to learn and much of it is so much easier to learn by example. I only worked K5P for a very short time with Rusty elmering, but even so I learned a lot, mostly that I have a lot to learn about operating HF, and will start out listening.

For those who don't know, you can listen without a radio via http://www.websdr.org, where several people have hooked their software defined radios to the internet, allowing us to tune in and receive all over the world on our computers. I look forward to the next time I work HF; it was a lot of fun, and thanks for the opportunity.

Thanks for your comment Bill. You can learn a lot by watching but there is nothing like jumping in the deep end of the pool. I remember when I gave my first CQ on phone in 1955. I had just gotten my general. I was so nervous, I hoped no one would answer :-). I got over my fright and I know you will too. Now they can't shut me up.

Welcome to a great hobby and a great group.

Topic: 1655 Message: 1655

I know a lot of Plano ops have been helping out with installing the station at the Frisco Sci-Tech center.
I also know that the Plano group is planning a JOTA setup and ops are planning to help out there.

But for anyone not yet committed, I invite you to schedule some time to staff the brand new Frisco Sci-Tech station. We plan to be open Saturday October 20 from 10a - 3p, and Sunday, October 21 from 12p - 4p.

If you can give a few hours on either day, come by our Facebook group where we're discussing who can be there for what hours. Share your knowledge & experience and try out the brand-spankin'-new station.

Ten-Tec Omni
ICOM-2820,

the latter of which will need some programming for the area repeaters. The Sci-Tech center is already at about 650' in elevation. Then there's a nice antenna way up over the roof.

If you want to get involved with this event, the Facebook group is http://www.facebook.com/groups/447281415314583

If you don't want to get involved, you are still welcome to stop by, say hi, and check it out. :)

1663. Magnetic Storm

Yahoo group: laterisersgroup
Date: 2012-10-01 21:37:40 UTC
From: Stan
Topic: 1663 Message: 1663

Anyone out there wondering what happened to the bands today? Well, there was a large surge in the solar wind last evening that triggered a significant magnetic storm (3 on a scale of 5).
While things have since settled down, it takes a while for the ionosphere to recover. Checking the bands a few minutes ago showed 10,12, and 15 meters essentially dead.
17 and 20 seemed noisy and rather empty as well. Best DX I could hear was Cuba on 17 as opposed to over the weekend when there were 10 and 12 meter openings to
Europe, Africa, South America, Australia, Japan and the South Pacific Islands. Hopefully things will recover in the next day or so to resume what is historically the best time of year for DX.

Darren,

Sorry you missed it. It was a decent though not great opening. Still, looking at the solar numbers, it was a bit surprising.
Some of the Australian stations were peaking S9 or so at times.
Managed to work 5 VK's (including my first VK3) and 3 ZL's so I'm not complaining.

Stan

1675. Cystic Fibrosis Public Service Event

Yahoo group: laterisersgroup
Date: 2012-10-08 01:32:49 UTC
From: Walter Lemons
Topic: 1675 Message: 1675

MARC, and all radio amateurs, have been asked to help again this year with the Cystic Fibrosis Cycle for Life bike ride on October 13. The ride will start at Myers Park in far north McKinney, and roughly follows the route of the Collin Classic. The event should be over about 2:00 PM.

Help is needed with all positions; Net Control, SAG, Shadows, Rest Stop monitors, and Tail End Charlie.

Please follow this link to the signup form:

Stan, thanks for the great resource. Just a couple of lingo questions.

What is "Authenticity Guaranteed (AG)" with regard to (e?)QSL's?

What is a QSX slot (in the DX code of conduct section)?

I looked up WARC bands myself: http://en.wikipedia.org/wiki/WARC_bands

Thanks again.

Stan, anyone can upload a document to the PARK website. It's really not very complicated, and can be done once you're logged in. Each upload has to be approved by the webmaster before it's posted. BTW, if you'd like to pick up some slack with the webmaster job, I'm sure Erik would welcome the help. I'm willing to bet you'd be shocked how much time it takes to keep it up to date.

Andy

1688. Re: [laterisersgroup] Re: HF Operating Basics - NW5Q Stan's presentation

Yahoo group: laterisersgroup
Date: 2012-10-09 22:04:46 UTC
From: Stan
Topic: 1675 Message: 1688

Hi Bill,

I hope you find it helpful.

Authenticity Guaranteed is the way eQSL verifies that you are who you claim to be.
They have several ways (explained on their website) to accomplish this, but the easiest
is probably to just scan your license and email it to one of their people they have setup to check such things.
As I recall, the process was pretty fast. Took them only a couple of hours to respond to my e-mail.
You can of course use eQSL without being AG, but then your confirmations do not count toward any of the awards.

Many times DX stations, particularly DXpeditions, will operate in split mode. For instance, the recent DXpedition to Conway Reef (3D2C) on 10m was transmitting on 28.495 and listening 5-15KHz up. So they were constantly tuning from 28.500 to 28.510 to hear stations calling them.
So for that particular item in the DX code of conduct, you should not tune up on the DX (28.495) or in the QSX slot where he is listening (28.500-28.510).

Hope that helps

73,
Stan
NW5Q

Registered Station List

We have the latest registration list, as of October 8, posted at
Registered Stations
<http://scouting.us5.list-manage.com/track/click?u=56ce1526bb2372707f5868e21&id=ae3ad8865e&e=1e0acb66a5>.

You can download a spreadsheet from this same page that includes
detailed information on each station including email contact information
for setting up schedules. The current total is 196 stations. You should
be able to make some great Scout to Scout contacts during this year's event.

Amateur Radio Newsline

Check out the latest issue of Amateur Radio Newsline posted at Report
1834
<http://scouting.us5.list-manage.com/track/click?u=56ce1526bb2372707f5868e21&id=d49a60c1d4&e=1e0acb66a5>

for an interview with Jim Wilson, K5ND, encouraging amateur radio
operators to get involved with the Jamboree on the Air. It's the last
item at 28:45 into the newscast.

JOTA Reports

Just another reminder that the week after JOTA we'll be forwarding an
email to every registered station with a link to the online reporting
system. This link will be for your specific station. The general
information you've already posted will already be in place. We will be
asking you to provide the following: number that attended your event,
total number of contacts, number of states, number of countries, number
of amateur radio operators at your station, highlights of your event,
suggestions for improvement, and we'll provide a way to upload or email
some of your best photos. So be sure to collect this information during
your event. For all those who complete the station report, see above,
we'll be forwarding a certificate that you'll definitely want to add to
your Scouting and amateur radio collection.

I'll jump in here just to suggest an alternative solution for the long term which can make site management easier.

I am the webmaster for the Lone Star Miata Club. (and I'm a ham radio op) and their site had the same problem- one webmaster with the knowledge and passwords, but not the time to keep up with the site. For us it was that the person had personal issues and had to focus on an illness in the family. Whatever. It is difficult to keep up with life and also manage a site, especially when a lot of things on the site need work.

So I moved everything over to Wordpress.
Wordpress is known as "blogging" software, but that really just means it's a Content Management System. (CMS). The advantage to using a CMS is that you author it on the server. No one needs special software to build the site. Anyone who logs in has all the assets (images, backgrounds, etc).

You can use Wordpress on their servers (nearly free) or use it on your own hosted servers (most hosting companies offer Wordpress).

Also, you can enable multiple, different permissions to work on the site. Some people can be authors, to write and post new updates. Others can have administrative access. Etc.

I built the LSmiata site, but the current president now does all the posting. I can also post, or clean up the page if things aren't flowing right. If we were to break out different duties (someone is in charge of organizing drives, someone else meetings, someone else the newsletter) each of those people can be given specific permissions to post to the site directly. This way, you eliminate the bottleneck of one person that everything has to go through.

I encourage you to check out the Lone Star Miata site for an example of what I was able to do in a couple hours. Updated news (the blog) and several static pages. I know the PARK web site is a lot more, so I offer this just as food for thought.

My own site, IEBA.com is also a Wordpress CMS,
but not hosted on Wordpress' servers.
Check it out for more info on me, and a completely different way how a CMS can look.

Andy,

I am fully aware of the document upload process. I am equally aware that it is pointless if no one ever checks for uploaded files to approve. And I'm sorry, but taking more than 6 weeks to get a document on the website is simply embarrassing.

No matter, the problem in this case has been solved!

Stan

1692. Re: [laterisersgroup] the web site.

Yahoo group: laterisersgroup
Date: 2012-10-10 13:41:44 UTC
From: Michael Long
Topic: 1675 Message: 1692

Anthony,

We do not need an alternate solution. This is not an issue with the tool that is used. Wordpress is a good CMS, no doubt, but so is Joomla! which is the CMS used to create the PARK site. Some would argue that Joomla! is a better CMS than WP, while some would not. Icom-Yaesu-Kenwood; Ford-Chevy-Dodge; Joomla!-WP. Take your pick.

The issue appears to be that we have one guy who is overloaded having the entire responsibility for upkeep and maintenance of the site on his shoulders. That is not a good situation for him, for the klub or for the site. This is not a micro footprint site that can be handled without much effort. I think Andy and Erik realize that, but maybe the rest of us need to, as well. You do address that in your post and you are spot on about that.

We need a number of people, 2 or 3 probably, to act as administrators who can take care of day-to-day tasks for upkeep and maintenance. The tasks could even be broken out fairly easily. One person to manage the calendar, one person for forum and document admin and one person for logins, front page and link maintenance. That is just a one possibility, there are any number of ways to break it out.

Just my $0.02,
Mike

Yes, usually it's okay to start, but having multiple people able to manage a site helps greatly. And any CMS is better than traditional HTML site authoring tools (IMHO). I'll check Joomla out as there are issues with Wordpress I'd like to avoid. No one system is perfect for everyone. Thanks for the info!

1697. Anyone want a free hot tub?

Yahoo group: laterisersgroup
Date: 2012-10-15 17:22:07 UTC
From: Damon Koch
Topic: 1697 Message: 1697

Anyone want a portable spa? It's nice enough, but I believe the pump is dead. It's a 4 person spa, maybe 5'x6'. Comes with the steps and insulated cover. I'm offering it here before it goes on craigslist. I believe it was manufactured in 2005. I have it on a dedicated 20A 110v circuit, but the manual says it'll run on a 15A.

1698. PARK High Altitude Balloon for JOTA this Saturday

Yahoo group: laterisersgroup
Date: 2012-10-19 02:47:57 UTC
From: Kipton Moravec
Topic: 1698 Message: 1698

The PARK Balloon SIG Will be launching a High Altitude Balloon on Saturday for the JOTA stations.

We have a number of ways to follow what is going on including Facebook and Twitter. We will also have Streaming video from a camera pointing out the side towards the horizon.

We invite all Scouts to try to contact the balloon's cross band repeater. The footprint should be a couple of hundred miles. We expect the balloon will go between 80,000 and 100,000 feet.

To: info@mckinneyarc.org
Subject: Support Requested: Youth in Ham Radio

Greetings,

My name is Jeff Demers, N1SNB.

I wanted to take a quick moment to tell you about a new program to support youth activity on the HF bands.

Chances are, if you were like me, getting on the air after getting your first license was a little challenging. Parents were bugged. Pennies were saved. Numerous “compromise” measures were taken to get that first station on the air! My company, Amateur Radio Supplies LLC, of Haverhill, Massachusetts seeks to help a few lucky young hams get on the HF bands and make some contacts! Do you know any deserving young hams? We will be giving away 3 complete HF stations per year in order to support activity on the ham bands,

Details at: http://www.amateurradiosupplies.com/youth-s/222.htm

My sincere hope is that you can spread the word to your club membership. Link the giveaway from your club website, mention it in your newsletter - anything you can do - to help make sure this program is a success is greatly appreciated. The more kids we can get on the air, the better!

If you have a young ham to nominate, email us. Otherwise individuals are invited to apply right from our website: http://www.amateurradiosupplies.com

Your support is greatly appreciated. The future of ham radio depends on youth activity. Please help spread the word.

73!
Jeff Demers, N1SNB
President - Amateur Radio Supplies

You probably have a big investment in the radio equipment you own and this isn't going to be your cure, but for others new to the hobby, there is a good way to do this. A solution would be to purchase a Kenwood TS-2000 HF radio, and also purchase the Kenwood TH-D7A**handheld. Both units have Skycommand System II Plus built in and the handheld can remotely control the TS-2000. This is pricey, but a viable alternative.

Admittedly, it it s handy-talkie solution, :)

But I was more looking for a real HF experience. Either the faceplate or
a dedicated device (7" android tablet & a jog wheel).

1717. UTD Professor doing Ionosphere research (GNSS, propagation, etc.)

Yahoo group: laterisersgroup
Date: 2012-10-26 19:56:09 UTC
From: wfahle
Topic: 1717 Message: 1717

I'm on a UTD mailing list, and saw this article about a new professor in at the Space Sciences Center of UTD who is particularly interested in ionospheric research pertaining to GNSS. http://www.utdallas.edu/news/2012/10/25-20351_New-Profs-Research-Looks-Skyward-for-Insights-on-I_article-wide.html?WT.mc_id=NewsEmail

I introduced myself and asked if he had any interest in meeting with the PARK club, and he did; he said his field of research began in the old days with amateur radio and similar signals. He's also interested in any signals of opportunity for research. I think there is an opportunity for mutual benefit here, as he is looking for sites for GPS research equipment like the one pictures above.

Our group meeting is not for a couple of weeks so I took the liberty of inviting him to breakfast, which he accepted. I'm not sure yet if he will come tomorrow or next week, he seemed excited to get started. I will be there tomorrow morning either way. It should be interesting; maybe we can invite him to give a talk at the monthly meeting.

Sounds like a WSHF scenario. Here's hoping some amateur radio can pull
the entire northeast together. If they need relays, start posting freqs.

1720. Antenna Rotators for Sale

Yahoo group: laterisersgroup
Date: 2012-11-03 21:06:36 UTC
From: Anthony (Tony) Campbell W5ADC
Topic: 1720 Message: 1720
Attachments: 7 described; binary payloads are missing from this source WARC

Before I publish this widely I thought I would give you a chance on these rotators if you are interested. Both are used but in working condition.

Alliance HD-73 $120

Hygain AR-22XL $80

The funds will go toward more field day antennas or balloon stuff, so the money will stay local.

Let me know,

Tony

Date: 2012-11-03 21:13:09 UTC
From: Anthony (Tony) Campbell W5ADC
Topic: 1721 Message: 1721

The Sci-Tech Discovery Center will be holding its first monthly operating event on November 10th from 11 am until 2 pm. This will be a regular monthly event. We will be looking for volunteers from the area to staff these operating times on a recurring basis. In order to participate you will need to complete your background check and volunteer application. This is a simple process required of all volunteers. You can look on the Sci-Tech website for additional information.

The contact at the Sci-Tech Center is Tamera Hurdle 972-546-3050 x101 Operations Manager. I believe they are closed on Monday's but it only took two days for me to obtain my approval, so you should still have plenty of time.

http://www.mindstretchingfun.org/support-sci-tech/volunteering-opportunities.html

All are welcome to participate after the application has been approved,

Tony

Tony,

There is no need to cover the whole band. I don't know the bandwidth of the filters, but by far the most important part of 10m for FD is 28.3 - 28.5, so 28.4 is probably a good center frequency.

Actually, I was testing all of the filters from last field day just to make sure that worked. And, I am in the process of building a Triplexer that would allow us to operate three radios into one antenna. One radio would be on each of the bands, 10, 15 and 20m. It looks like it would work great. I will publish the data later today.

I have the test data that I can show you later today. I don't have a beam in the air, but I do have the hexbeam that we could put up if necessary. One of the next steps is to hook this up to some radios to make sure that we can see the level of isolation between bands. That will be a project for one of these days pretty soon.

Oh yeah, the hex beam. Duh!

I recall the ARRL did some testing with diplexers and triplexers and the biggest difficulty was determining how much RF the receivers could tolerate without damage. Those specs are not generally available for most radios.

Wow! The triplexer isolation is pretty phenomenal, but isn't the
insertion loss rather high?

Most of the loss is the filters that are hooked used with the Triplexer.

That would be impressive indeed.
I remember the hexabeam.
I have a Butternut vertical that could be used as well.
But can one driven element radiate energy on three frequencies at the same time?
Is that 300w hitting the element?
And what of the (energy from) SWR for 20m coming back on the other coax lines to the other radios? I'd expect a tuner at each radio would be needed. Or would the bandpass filter eat up the excess SWR energy?

Technically I don't think there's anything prohibiting different RF from radiating, but it's not something I've seen before.

Topic: 9 Message: 1739

Well, 2 DB down, but with no cross-band interference?
I'll take that over 2 DB louder, with constant interference.

Now, the question is if we can get narrow filters to isolate, say, 20m voice and 20m PSK. The triplexer would also work nicely for a PSK station to be able to switch bands if one goes dead and not have to worry about hammering other stations.

Also, if you're a Downton Abbey fan, the very first episode opens on a CW key and a train running down the tracks with clear authentic Morse at about 5-10 wpm (that part's probably not authentic); I won't spoil it for you if you've not seen it; it's fairly easy to transcribe.

Hello Dave,

My name is Clyde Dominy, N5IF, and I am asking for help for Stuart Swarts, K5STU. Stu lived in Cleveland, Tx., and was a member of the Sam Houston Amateur Radio Klub for many years. Stu is blind, completely, and is now 70 years old. His son moved him to Plano last week so he would be closer to him. He now lives in an apartment building near Sams and Walmart. He is on the 3rd floor and not allowed to have an HF radio there so all he has is an HT. He needs someone to assist him programming the HT for your local repeaters. I would greatly appreciate the help anyone close to him could give.

Stuart's phone number is 972-985-2808.

If no one there can help, please let me know and I will look further.

Thanks & 73,
Clyde Dominy, N5IF

I thought I'd try to help the gentleman. I called him this morning and we are taking steps to get it done. He has a HT but it is locked up and he is getting someone to remove the lock from the filing cabinet. When we find out what brand and model he has, then we'll be looking to find someone who might loan us a cloning cable and software. If no one has the software available and he can't afford it, I might ask folks for a donation to help him out. But first things first..... get it unlocked and find out what we are working with, then hunt resources.

73,

Michael KE5TJL

1752. Missed breakfast for Azle hamfest

Yahoo group: laterisersgroup
Date: 2012-11-12 21:06:22 UTC
From: wfahle
Topic: 1752 Message: 1752

Howdy y'all Bill K5WL here, I went to the Azle hamfest and picked up an ICOM IC-735 this last Saturday. I have tested it with a temporary setup (made first 3 cw contacts last night!) on the kitchen table, which for some reason Heather doesn't want to be permanent. Any tips for a new HF-er with antenna restrictions? The QTH is in an HOA and has radiant-barrier roof, so attic antennas are out, I think. I have two choices for hamshack, one on the ground floor and one on the second floor interior. I know the second floor will complicate the RF grounding setup, any other reasons to avoid it?

As for antennas, my current thinking is to set up a permanent coax cable running from the shack to the outside wall and through a grounded lightning arrestor, which will be covered and weather protected most of the time when not in use. In use, I will run coax from this point to a portable antenna, such as a hamstick dipole or buddipole, or a buddistick type vertical, or a fishing pole type vertical (elevating a wire with a non-conductive telescoping pole) raised only when in use. Also thinking of a A/Bing a roofline wire dipole offset by insulators, but I'm not sure how much the radiant barrier is going to interfere with this. Other ideas? Warnings?

Great timing! This month's club meeting topic is show and tell. I know Tony W5ADC has a ton of ideas and proven concepts for portable antennas, and many of them can be easily adapted to stealth applications.
Tony, can you bring your vertical base that you brought to the JOTA last month?
I have a 10-17M stealth vertical that I can bring. It works fine on 10M, shut up Scott.
Stan NW5Q is also HOA limited, and he gets away with his OCF dipole.
Maybe a loop antenna around the perimeter? I'm not sure how the radiant barrier would mess with it if the wire were to run along the eaves.
Regarding your feedline, getting it outside isn't too bad. What I did was run LMR400 through the attic to a bulkhead in the soffett. It sounds like yours is a two story house, so perhaps running the feedline from the soffett through some schedule 40 to outlet height, then take a 90 degree elbow connector to a bulkhead connector inside a weatherproof outlet box? Then it's an easy attachment for feedline going to the stealth antenna in the yard, and if you paint the schedule 40 and outlet box to match the house color, the HOA won't have anything to complain about.

Subject: [laterisersgroup] Missed breakfast for Azle hamfest

Howdy y'all Bill K5WL here, I went to the Azle hamfest and picked up an ICOM IC-735 this last Saturday. I have tested it with a temporary setup (made first 3 cw contacts last night!) on the kitchen table, which for some reason Heather doesn't want to be permanent. Any tips for a new HF-er with antenna restrictions? The QTH is in an HOA and has radiant-barrier roof, so attic antennas are out, I think. I have two choices for hamshack, one on the ground floor and one on the second floor interior. I know the second floor will complicate the RF grounding setup, any other reasons to avoid it?

As for antennas, my current thinking is to set up a permanent coax cable running from the shack to the outside wall and through a grounded lightning arrestor, which will be covered and weather protected most of the time when not in use. In use, I will run coax from this point to a portable antenna, such as a hamstick dipole or buddipole, or a buddistick type vertical, or a fishing pole type vertical (elevating a wire with a non-conductive telescoping pole) raised only when in use. Also thinking of a A/Bing a roofline wire dipole offset by insulators, but I'm not sure how much the radiant barrier is going to interfere with this. Other ideas? Warnings?

1755. Ameritron AL-811H Amp for Sale

Yahoo group: laterisersgroup
Date: 2012-11-13 03:12:29 UTC
From: Anthony (Tony) Campbell W5ADC
Topic: 1755 Message: 1755

Before I spread the sale widely, I thought I would give these groups of chance. Yes, this is the amp that I won recently. Since most of you know my HF operating habits, you know it will sit idle for a long time. I did just complete a check out of the unit and it appears to work just fine and generates the rated power. I looked around and $550 seems to be a below market price. I really want to purchase a doppler direction finding system, so I need to sell this first.

Let me know if you are interested,

Tony

http://www.arrl.org/news/usps-seeks-to-phase-out-ircs

I sent the following e-mail to president Kay Craigie, N3KN of the ARRL. I also filed a comment with the USPS. If you agree with my position, I ask that you likewise write to President Craigie with a similar message and file a comment with the USPS.

President Craigie,

With regard to the announcement by the USPS and the "phase out" of IRC's, I wonder if the ARRL has filed a comment regarding this proposed change.

Personally, I am a regular user of IRC's and would be severely hampered in my QSL activities without this tool. I am a regular user of LOTW, which does provide an alternative to the exchange of paper cards but some award systems, notably the RSGB IOTA awards accept only paper cards as proof of contact. I am sure you are aware of the problems of sending US currency to many third world countries and the value of IRC's in this regard.

I did not see anything in the link below that indicated the League had filed a comment with regard to the change. If it has not, there is still time do so and urge the ARRL to at least file a comment before November 23rd.

++

I also filed a similar comment with the USPS on http://www.regulations.gov/#!submitComment;D=USPS-2012-0101-0001 . The comment period ends on November 23rd, so I urge you to at lest file an individual comment to the USPS.

I am a licensed radio operator in the FCC Amateur Radio Service and I regularly make use of IRC's to obtain written confirmation of international radio contacts. Foreign postal rates are much higher than in the US and it is often necessary to supply funds for return postage from other countries to the US.

The only alternative to IRC is to send currency. In many countries, postal tampering is so rampant the envelopes often never reach the intended their intended recipient if they are suspected of containing US currency.

I urge the USPS to continue to support the issuance and sale of IRC's.

Respectfully,

(Name) (Call Sign)

Doomsday is almost here! And it is not too late for you to help with the celebration. We need volunteers to get N0D on the air. If you are wiling to operate N0D from your home station for one hour or more on any of the three days, please send an e-mail to N0D.doomsday@.... Let me know what band and mode and time period(s) you selected.

You can help celebrate Doomsday, the end of the world by signing up to operate with the special call sign, N0D on one or more of the three days of the official Doomsday Celebration.

1. December 20th, Pre-Doomsday Celebration
2. December 21st, The real deal or
3. December 22nd, If we are still here. Plans for December 22nd are a little iffy right now.

You won't have to leave the comfort and safety of your personal bomb shelter and it will be a timely test of your Doomsday communications. Remember, it just might be your last QSO.

We designed a unique QSL for Doomsday, you can see it on our the Doomsday website at http://www.nowzerodays.com/qsl.html

73, N0D

N0D-Now Zero Days

Special Event Station for Doomsday!

The End of the World!

Topic: 1756 Message: 1758

Ron,

Frankly you are barking up the wrong tree. Thanks to the Republican controlled congress, the USPS has been put in an untenable financial position. Surely you've heard about it.
In 2006, they were mandated to fund 75 years worth of pensions in a mere 10 years, something no other business on earth has ever been required to do. In the current legislative term,
the Republican controlled House refused to take up any action to address the financial issues of the USPS. As a result, we will continue to see them implement cost cutting measures
like eliminating IRC's, which I am sure are not profitable. Many in Washington want to eliminate the USPS altogether, then where will you get IRC's?

No, you really should be writing your Congressman and Senators demanding that they address the financial issues of the USPS.
The USPS serves the entire nation and doesn't get a single penny of taxpayer support. Fedex on the other hand only serves about 75% of the US population,
yet gets $12B a year in subsidies from the government. How does that make sense?

How about we address the problem, instead of just complaining about the symptoms?

Really, to operate barefoot with a radio on a few basic bands using resonant antennas or one of the many verticals that offers coverage on multiple bands, A small table in a corner (maybe a second hand roll-top desk) will suffice. Getting the signal from inside to outside will be the biggest challenge and a second-story window (with no balcony) makes that a bit easier and safer than a ground floor window.

I've used mag-mount mobile HF antennas on iron picnic tables to start, but wire antennas always come up as winners when it comes to radiated power, and hidability. :)

Stan,

I am not trying to move mountains.

I have little sympathy for the postal service and the predicament they put themselves into over the years. Besides, I'm pretty sure that my congressman or senator do not even know what an IRC is since they get free postage.

I have no problem drilling through soffet or even brick if it comes to that, and indeed the "shack" will just be a single desk in the office or a desk in the TV room (upstairs). There are noise considerations (mic, straight key, power supply) either way, but neither room is used very much in the later evenings when I'll mostly be on the air. As I said, RF grounding is complicated by the length of the grounding wires, so I'll have to do the capacitor/coax trick. The problem with a wire dipole will be getting it up to any height. As a new home, we have 7 foot tall trees. p.s., is 26 gauge magnet wire sufficient for transmit? Maybe I can elevate some of that. Thanks for the help.

Depending on how you feel about the social media and ham radio connection, this may not be your cup of tea.

#WATwitter QSO Party

Twitter is one of many social media sites that helps connect people around the globe by letting people send short 140 character messages. As it turns out, there are a great many amateur radio operators around the world who also use Twitter. Some of them use their call signs as their Twitter ID, or might use something else. How do you find Twitter-using amateur radio operators? Try searching <https://twitter.com/search> for a call sign, or look at the #hamr or #hamradio hash tags. <http://www.twitter.com/>
<http://www.twitter.com/>
The idea for the Worked All Twitter Thanksgiving QSO Party started in 2011 <http://bionic-nerd.com/index.php/worked-all-twitter/> when Connie Bird/NR4CB (@Bionic_Nerd <https://twitter.com/Bionic_Nerd> on Twitter) came up with the #WATwitter hash tag to help arrange QSOs with other Twitter-using amateur radio operators over Thanksgiving. That grew into Twitter hams trying to work other Twitter hams. Like the Worked All States or Worked All Continents, the idea behind Worked All Twitter (WATwitter) is to make contacts with as many Twitter-using amateur radio operators as you can.

Using Twitter to locate hams and then making contact? That does not sound like how I want to spend my time. I don't Tweet, although this makes me want to "inhale". Medicinally, of course. Aaaahhh, that's better.

Reporting from the DARK side,

True, but I find with any wire antenna, especially a dipole cut to length, that it radiates beter than any other compromise antenna.If you can throw some fishing line over the roof to the other side of the house, and then lean the antenna down at an angle from the roof, you'll be doing pretty good.

You can also do an end-fed antenna, fed at the top, and then use a tuner.

A ground is good. I have a ground at the antenna feed point, but then my coax runs through a bit of attic and then down into the center of my garage. My radio is not grounded. It still works.

My last house had the radio in a second floor bedroom. It wasn't grounded. It still worked.

1767. the Capacitor/Coax trick

Yahoo group: laterisersgroup
Date: 2012-11-15 00:53:28 UTC
From: Robert Speckmann
Topic: 1752 Message: 1767

Hi Bill (or anyone else who can comment),

Can you please describe "the capacitor/coax trick" ? I would like to have my ham shack on the 2nd floor, and want a good RF ground. I've only seen one very brief reference to this technique, but would like some more details. If you know of an internet location that describes this, I'd really appreciate it if you could send me a link.

Best regards,
Robert AE5LC

1768. Re: the Capacitor/Coax trick

Yahoo group: laterisersgroup
Date: 2012-11-15 23:57:39 UTC
From: wfahle
Topic: 1752 Message: 1768

There are (at least) two options. One is an "artificial ground" such as the MFJ 931, the other is to do what is probably the same thing but less expensive if you can find the capacitor (look at the very end, but the whole page is a good read about RF grounding):
http://kc.flexradio.com/KnowledgebaseArticle50426.aspx
Of course the MFJ will work for any band, whereas the article's method requires custom counterpoises and/or capactiors.

> I have no problem drilling through soffet or even brick if it comes to that, and indeed the "shack" will just be a single desk in the office or a desk in the TV room (upstairs). There are noise considerations (mic, straight key, power supply) either way, but neither room is used very much in the later evenings when I'll mostly be on the air. As I said, RF grounding is complicated by the length of the grounding wires, so I'll have to do the capacitor/coax trick. The problem with a wire dipole will be getting it up to any height. As a new home, we have 7 foot tall trees. p.s., is 26 gauge magnet wire sufficient for transmit? Maybe I can elevate some of that. Thanks for the help.

In use, I will run coax from this point to a portable antenna, such as a hamstick dipole or buddipole, or a buddistick type vertical, or a fishing pole type vertical (elevating a wire with a non-conductive telescoping pole) raised only when in use. Also thinking of a A/Bing a roofline wire dipole offset by insulators, but I'm not sure how much the radiant barrier is going to interfere with this. Other ideas? Warnings?

Interesting article, and good options to have in your bag of tricks, but I would suggest taking it all with a grain of salt. I think there are very few hams who have ground connections of a meter or less. I have an amazingly (and atypically) short connection and it is still easily 3 meters. Also, the counterpoise solution I view as totally impractical.

But let me suggest that you first run the shortest ground feasible to your 2nd floor shack and see how it works. I have several friends with 2nd floor shacks and they do not have RF problems. You may be pleasantly surprised, especially if you are only using 100 watts or so. Unfortunately, it is mostly trial and error with every situation being unique. Good luck and be aware that there are many folks willing to help if you have problems.

Several PARK members own these really handy Honda generators. If you are not aware of the recall info, here is the story.

<http://www.kimt.com/tags/American-Honda/default.aspx> American Honda, <http://www.kimt.com/tags/Generators/default.aspx> Generators, <http://www.kimt.com/tags/Recall/default.aspx> Recall

WASHINGTON, D.C. ☐ American Honda is recalling about 150,600 portable generators because the generator☐s fuel hose can leak, posing fire and burn hazards.

Honda is aware of four incidents of fuel leaks. No fires or injuries have been reported.

This recall involves Honda gasoline-powered portable generators with model number EU2000i and serial numbers EAAJ-2260273 through EAAJ-2485025.

The generators are black and red in color or have a camouflage design. They measure about 20 inches long by 11 ½ inches wide by 16 ½ inches tall.

☐Honda,☐ ☐EU converter☐ and the model number 2000i are printed on the side of the generator. ☐Companion☐ is printed on the side of some EU2000i models. The serial number is located on the lower right side, rear corner of the generator.

The generators were sold at Honda Power Equipment dealers, Camping World, Gander Mountain, Grainger, Hertz Rental, John Deere, National Pump & Compressor, Northern Tool, Scheels Sporting, Sportsman☐s Warehouse, Sunbelt Rentals, True Value, United Rentals, White Cap and Wholesale Sports store nationwide and online from October 2011 through September 2012 for between $1,150 and $1,400.

Consumers should immediately stop using the recalled generators and contact the nearest Honda Power Equipment dealer to schedule a free inspection and repair.

Call American Honda toll-free at (888) 888-3139, 8:30 a.m. to 5 p.m. ET Monday through Friday, or visit the firm☐s website <http://powerequipment.honda.com/support/recalls-and-updates> for more information.

The way I understand it, it is about sound quality you produce and getting rf burns, rather than work/not work. I heard one guy talking about how every time he keyed up his circuit breakers would blow (due to RF detected in special spark-sensing breakers), so it may not just be burns. Also, if your ground is 30 feet long and you mainly work 80 meters, no problem. But 10 meters is supposed to be more of an issue, where a 10ft ground is "too long". I don't know, I understand that we don't "have" to do many things, but it is a permanent installation with a fairly cheap solution (those kV capacitors are a buck), so I'll a/b it with ground and no ground and keep you posted as to whether I can tell a difference.

As for antennas, I agree completely about dipole. In person, Stan suggested that whatever I do, I keep it away from the house if possible. I had been running one leg of a 40m wire dipole along the eave of the house and the other in open space across the yard (couldn't even get it to tune without at least one leg in space). Instead I put both legs out into the back yard with only the apex near the house (90 degree horizontal v 6ft high), and man what a difference, on both send and receive. This may work (I'd still have to take it up and down); I'll have to see if I can at least CW DX this weekend, but I was 599 into Wyoming on send and receive on first try, with the receive blowing away any S/N ratio I had before.

On grounds... I've been trying to remember the last time anyone hammered in a ground stake for their radio during field day. I cant think of one.

Thanks Stan & Bill,

These eases my fears. It's nice to know that others have 2nd floor ham shacks that work fine. (Some articles make it sound much worse). Thanks Bill for the link. This is exactly what I was looking for. This should provide the food for thought that I was looking for.

Grounding for some is very much akin to a religion and folks tend to evangelize. Problems can and do occur, but they are thankfully pretty rare. I fail to see a problem with just giving this a try. Take your radio to your 2nd floor location, hook it up temporarily and see how it works. If you don't have a problem, great! If you do, RF problems are just not very subtle (you will know very quickly) and will then need to be addressed. .
Still, it may not be all that hard as now we know some tricks to help.

As Anthony rightfully points out, rarely are radios at Field Day ever grounded as it's just not very practical. That is of course a temporary situation.
But at the same time, RF issues don't generally occur and there's a heckuva lot of RF, so there's no reason to assume you will have a problem at home.

My one friend regularly runs a KW or more from his 2nd floor shack without any problems and without any special grounding tricks.
Still every situation is unique and your mileage may vary. I suggest you think of it as an experiment, see what happens and have fun!

My brother in law Ben, who is the tallest of all of us, at 6□4□ is a long-practicing Vegan. And his wife, though not Vegan, is a recent convert to those who ascribe to the ills of gluten, and has become gluten-free.

The good news is that they both practice their diets rather quietly, and aren□t those obnoxious people loudly telling everyone else how wrong they are with their diets and that everyone should be like them. I mean they have to be, because the rest of us are obnoxious, proud eaters of gluten and carnivorous omnivores, if such a thing is possible.

So when my brother in law hosted the pre-Thanksgiving family dinner with the parts of the family that don□t go down to Julian for the holiday, he prepped his animal free dishes of vegetables, and his wife□s gluten free dishes of non-glutenous vegetables and salmon, not ever concerned that there were barbarians at the gates.

The rest of us were on our way with our gluten-rich side dishes of veggies and casseroles and mashed potatoes and the like. But the biggest offender of all was Ben□s father-in-law and my hero, who brought the meat to the pre-Thanksgiving meat-fest, in the form of 6-dozen fried shrimp, a 15 pound rib-eye roast that was cooked to perfection, and a 25 pound pork roast with a pineapple Hawaiian glaze that was about the size of a basketball if the basketball had a diameter that was 50% larger.

My mouth waters again just thinking about it. And so the rest of the family descended upon Bens house like a fleshy gauntlet of ravenous orcs. Though there were only about 20 of us, excluding the meat and gluten free, we laid the smack down on the shrimp and the two roasts that dominated the center of the table. Like the Grinch□s heart, my stomach grew three sizes that day. And as I ladled the pineapple sauce onto my last bite of tender pork roast, I looked at the meager remnants of cous-cous and sautéed vegetables on my brother in law□s plate, and thought, poor sap, how can people live like this? And then, after two slices of gluten-rich pie, as I lay on the couch, unable to move, my brother was outside playing a game of basketball with the kids. And I thought, □Yeah, this is living ..□

Have a gluten-rich day!

I didn't have time to get the ground set up this weekend, but after I do I will have some coax and a 1kv capacitor left over which I'd be happy to pass along at a breakfast or something. When I transmit my laptop mouse stops working, so I think I do have an RF problem.

I have completed the ground, and I have the results from the a/b test. The noise level went from 5.5 on the s-meter to about 3.5, with the only difference being turning off the unit, installing the ground, and turning it back on. I should record the difference. I have about 40 ft of rg-8x coax and a spare capacitor that I will bring to the next breakfast for Robert, or the first taker if he's not there. The computer mouse problem seems to have cleared itself up before I installed the ground, so that remains a mystery.

Bill,

That's interesting. The coax/capacitor ground clearly cut down your common mode noise. That is a very good thing, though it has only a limited correlation with RFI.
Placing ferrites at the ends and middle of your feedline will also cut down on common mode currents. Was this measurement taken on one particular band or multiple?
I'd also be curious to know what antenna you are using?

Stan

Topic: 1752 Message: 1782

Bill & Stan,

Thanks for the experimenting, data gathering, sharing & discussing. I find this interesting & helpful as I try and fill-in all the pieces of this jig-saw puzzle.

I'm not really a morning person (not even a "lateraiser") so I have yet to make it to Poor Richard's. However I'll try and make it this Saturday. If I don't make it, feel free to donate the coax & cap to another worthy person (I can scare up some coax and a 1kV cap if necessary). But I'd definitely like to hear how you routed your coax, your ground rod setup, your antenna, etc and anything else I can glean.

best regards (& Happy Thanksgiving)
Robert
AE5LC

Bill,

That's interesting. The coax/capacitor ground clearly cut down your common mode noise. That is a very good thing, though it has only a limited correlation with RFI.
Placing ferrites at the ends and middle of your feedline will also cut down on common mode currents. Was this measurement taken on one particular band or multiple?
I'd also be curious to know what antenna you are using?

Stan

The noise level went from 5.5 on the s-meter to about 3.5, with the only difference being turning off the unit, installing the ground, and turning it back on. I should record the difference. I have about 40 ft of rg-8x coax and a spare capacitor that I will bring to the next breakfast for Robert, or the first taker if he's not there. The computer mouse problem seems to have cleared itself up before I installed the ground, so that remains a mystery.

1785. Need cable and software for Icom IC-T2H handheld for blind Ham Stu Swarts

Yahoo group: laterisersgroup
Date: 2012-11-26 21:54:16 UTC
From: ke5tjl
Topic: 1785 Message: 1785

Does anyone have a cable and software for an Icom IC-T2H handheld that they are willing to lend for a while? This is for Stuart Swarts that came to us from a amateur club in Cleveland, Texas. Stuart and his wife, Lois, both have their general ticket. They are blind and could really use our help. They want to join the club to be with fellow hams, even though they don't have their HF rig anymore. We need to set up their HT for our repeater, and any other that repeaters that are suggested, or which are reachable from a HT at their apartment. They live in a 3rd story retirement apartment at Coit and 15th street. Any help or suggestions would be greatly appreciated.

1786. Need Recommended Repeater Information

Yahoo group: laterisersgroup
Date: 2012-11-27 14:39:51 UTC
From: ke5tjl
Topic: 1786 Message: 1786

I want to ask everyone to send me a list of repeaters (about 10 or so) that could be received from the area of 15th Street and Coit in Plano, Texas. This is for the two blind amateurs who want to surf the repeaters and join our club.

I have programmed the PARK, MARC and Dallas into Stu's handheld, but I don't know what other repeaters that he would be able to access with his 5 watt HT. Any help would be greatly appreciated. Thanks a lot!

73,

Michael KE5TJL

Richardson, Mesquite for starters.

The RWK is a wide area repeater in North Texas

147.120(+) Mhz

(no tone required)

The repeater is normally open to all local hams.

WJ5J/R 145.310 PL 110.9 Hz

1789. K5STU, Stuart Swarts HT

Yahoo group: laterisersgroup
Date: 2012-11-28 05:03:52 UTC
From: ke5tjl
Topic: 1789 Message: 1789

Thanks to Stan, William and Anthony for their valuable input on the repeater list that I programmed on Stu's Icom IC-T2H 2m handheld today. Thanks for everyone's involvement from the very start.

I downloaded a manual on the HT, and as manuals go, this was a little confusing when it came to program it. I did find a 'cheat sheet' on the internet that in six steps, you can program the radio quickly. I made a file of the repeater frequencies for Stu and he will write them in Braille, and give him the files for the manual, cheat sheet and repeater list. After I call Stu in the morning and arrange a time, I'll return his HT back to him tomorrow afternoon. Does anyone have a 18" flexible 2m antenna that we could give to Stuart? His antenna for his HT is 6" long. I think that he might still need a j-pole antenna to sit on his window frame with enough coax (with BNC connectors) to reach anywhere in the living room. Anyone want to see what they could do for Stu and his wife, Lois?

Again, thanks to everyone!

73,

Michael KE5TJL

Great job, Michael. Your dedication to helping Stuart is very commendable.

I have a extra 2m mag mount in my attic on a cookie sheet that he could use. The coax on that is 8-10 feet or so.

We could make a 2m ground plane pretty easily if he has a place to hang it from.

Mike

Topic: 1789 Message: 1792

Yes, thanks Michael. I want to add that today I discovered I've been missing out on a fantastic 1000ft 250w north texas repeater in Aubrey (linked to California somehwere) with a monster footprint because the repeater directory had the frequency off by .01Mhz. It should be 145.26, not 145.27, pl 100.0. I've sent the updates to the repeater directory folks and verified on-air that I can reach it from my Work in Dallas all the way home to Little Elm (of course) on an HT. Previously I could barely hear it in Little Elm.

http://www.k5rnb.com/repeater.html

Check it out.

1793. FW: imaginative event release

From: K5HM
Topic: 1793 Message: 1793

Doomsday Press Release

N0D - - Special Event Station celebrating The End of the world!

That's right, the end is finally near. According to one of the three Mayan Calendars, the End of the world will occur on Dec 21, 2012. To celebrate this literally once in a lifetime event, Special Event Station N0D (Now Zero Days) will be activated on 10-80 meters for three days during and after(?) the end of the world. December 20; is a celebration of the end of the world. December 21, the day of destruction, we will be on the air as long as possible. December 22nd, that is a little iffy right now.

N0D team will be working available satellite passes beginning December 15th, 2012, through the end of the world and possibly beyond until December 22nd. The team will be using the Official Doomsday call sign, N0D. This will provide cosmic, even intergalactic coverage for the end of the world as we know it.

Amateur radio stations around the crumbling globe are invited to contact N0D, who will be operating from secret, undisclosed locations. Our operating schedule may be a little erratic as destruction rains down upon us. Those who may be looking skyward for the end of the world, N0D will be operating on several satellite passes.

You can celebrate Doomsday by contacting N0D directly on the air. Amateurs can also become an official Doomsday station by registering on our website. You will be given a registration number and the authority to identify yourself as "Official Doomsday Station" followed by your Doomsday number.

QSL with SASE to KK5W. If Doomsday actually does happen, we regret that a QSL will not be possible so hold on to your SASE until the 22nd at least. Check out our website for a preview of the N0D QSL card.

Amateurs can also become an official Doomsday station by registering on our website. You will be given a registration number and the authority to identify yourself as "Official Doomsday Station" followed by your Doomsday number. Official Doomsday stations will receive the Doomsday Station Certificate.

It is not entirely clear exactly how it will happen. Will it be a cataclysmic shift in the earth's magnetic field, Global Warming on steroids, earthquakes, volcanoes floods, global thermonuclear war, meteor collision, the 10 plagues of Egypt UFO invasion who knows ? There are scientists, soothsayers and philosophers on both sides of the question. Either way it will be an event worth remembering.. . .or maybe there will be no one left to remember it?

More information is available on the Official N0D website, www.nowzerodays.com <http://www.nowzerodays.com/>

You can also e-mail the N0D team at N0D.Doomsday@.... Check our website for the latest updates. www.nowzerodays.com <http://www.nowzerodays.com/>

From: Robert Speckmann
Topic: 1799 Message: 1799

Attention Ted Gurley,

Since you seem to have interest in Morse code (in music anyway), I thought you might find this interesting. (Sorry if this is a repeat).

The NASA Mars Rover Curiosity has, as part of its tire tread pattern, the Morse code symbols for JPL, so as the rover moves along it leaves them in its tracks.

2 Nights Before Christmas

Ron Litt, K5HM

Two nights before Christmas and up at the shop,

Santa was checking his sleigh for the big hop.

His APRS was already on line,

So the gang down at NORAD could track him 5 - 9.

The new HF rig was tuned up on 20.

He knew that 100 watts would be plenty.

"I'll be on VOX for this flight", he said in his head.

I have to be able to look straight ahead."

So sideband it is for the big night tomorrow.

I hope the CW guys won't be too full of sorrow.

The two meter rig was already encoded,

with every repeater that could be uploaded.

They'll know when Santa's near; they won't be surprised,

and make sure the kids have all closed their eyes.

He stopped for a moment then gave a big start,

when he suddenly realized he was missing a part.

"Of course!", he shouted. "its my laptop PC!

I won't get far without it on my knee."

"Its got my log and my list and my flight plan too,

though I always have Rudolph to guide me through."

He pulled out his wallet once more to check,

that his FCC license was there for the trek.

"Well, it looks like I'm ready", they heard him declare,

"I'll be single op unassisted for the entire affair."

"I better get some rest now before the big night,

So I can be ready for the long flight."

And they heard him exclaim as walked off to bed,

"CQ, CQ, CQ . . . QRZed?"

Merry Christmas Y'all

2 Nights Before Christmas

Ron Litt, K5HM

Two nights before Christmas and up at the shop,

Santa was checking his sleigh for the big hop.

His APRS was already on line,

So the gang down at NORAD could track him 5 – 9.

The new HF rig was tuned up on 20.

He knew that 100 watts would be plenty.

“I’ll be on VOX for this flight”, he said in his head.

I have to be able to look straight ahead.”

So sideband it is for the big night tomorrow.

I hope the CW guys won’t be too full of sorrow.

The two meter rig was already encoded,

with every repeater that could be uploaded.

They’ll know when Santa’s near; they won’t be surprised,

and make sure the kids have all closed their eyes.

He stopped for a moment then gave a big start,

when he suddenly realized he was missing a part.

“Of course!”, he shouted. “its my laptop PC!

I won’t get far without it on my knee.”

“Its got my log and my list and my flight plan too,

though I always have Rudolph to guide me through.”

He pulled out his wallet once more to check,

that his FCC license was there for the trek.

“Well, it looks like I’m ready”, they heard him declare,

“I’ll be single op unassisted for the entire affair.”

“I better get some rest now before the big night,

So I can be ready for the long flight.”

And they heard him exclaim as walked off to bed,

“CQ, CQ, CQ . . . QRZed?”

Merry Christmas Y’all

1817. FYI - 2013 Morse Code Class Begins January 7th, 2013

Yahoo group: laterisersgroup
Date: 2013-01-02 03:21:53 UTC
From: Robert Speckmann
Topic: 1817 Message: 1817

FYI. The 2013 Morse Code class will begin on Monday 1/7/13, if anyone is interested.

The class is put on by the Dallas Amateur Radio Club. The class is held on the air. To attend the class all you need to do is tune your radio to the DARC repeater at 442.425 Monday thru Friday at 7:15pm (Hummm, last year they held it on their 2m repeater. Oh well, what-ever).

See the details below.

73

Subject: [CWDallas] 2013 DARC Morse Code Class on the Air Begins January 7th, 2013

This is a special notice sent only once. If you receive "web only" or "grouped" messages for CWDallas, your profile and notifications will continue. Again, this is a special notice, sent only once to inform you of the DARC Morse Code Class for 2013.

Here's the current information on the 2013 class. Anyone can sign up...

This is the Dallas Amateur Radio Club "Morse Code on the Air" class for 2013. The purposes of this class is to teach the art of Morse Code to hams interested in this form of communication.

This class is conducted "live" on the W5FC repeater in Dallas at 442.425MHz, every Monday, Tuesday, Wednesday, Thursday and Friday at 7:15 PM CT. On request there will be a "brush-up/practice" class on Saturday. (That class will have a pre-arranged schedule - most likely between 8 and 9PM CT.)

Scheduled completion (currently) will be March of 2013.

If you are a licensed ham, you may check into the net directly. You do not need to be a member of the DARC, just have an interest in CW.

You can also sign in via Echolink at W5FC-R and join RF participants in Q/A, read-back, and general comments.

You can also go to http://ustream.tv/channel/CWDallas

While you cannot see the net control, all the audio will be archived here, with class numbers and objectives of each class.

Archived audio copies from each class are available on archive.org, and the links are located in the "Links" section of the CWDallas Yahoo! Group. You can search archive.org with "CWDallas" and find the classes for 2013.

This class is sponsored by the Dallas Amateur Radio Club. For more information about the club please go to our website: http://www.w5fc.org

1818. Looking for a Used HT

Yahoo group: laterisersgroup
Date: 2013-01-06 22:41:10 UTC
From: Darren Mende
Topic: 1818 Message: 1818

Happy New Year!!

I am in the market for a dual-band HT and wanted to inquire with the group about the availability of any used units before I set out on the internet. So, if anyone has a dual-band HT they are looking to sell, please send me a private email with the details. Preferably, I'd like to have something with either wide-range receive or FM broadcast receive.

Thanks in advance!!

The Wouxan kg-uvd1p is duel band, has wide or narrow receive, and also has FM broadcast receive. With the computer disc and cable it is still cheaper new than some of the other brands used. The battery last a long time and so far it seems like a very durable radio. I would keep it in mind while looking for a radio.

1822. DHS Warning about JAVA and instr uctions to disable

Yahoo group: laterisersgroup
Date: 2013-01-12 15:57:56 UTC
From: Greg Evans K5GTX
Topic: 1822 Message: 1822
Attachments: 3 described; binary payloads are missing from this source WARC

The Department of Homeland Security issued an Alert about Sun's JAVA Software yesterday.

QUOTE <

A vulnerability in the Java Security Manager allows a Java applet to grant itself permission to execute arbitrary code. An attacker could use social engineering techniques to entice a user to visit a link to a website hosting a malicious Java applet. An attacker could also compromise a legitimate web site and upload a malicious Java applet (a "drive-by download" attack).

Any web browser using the Java 7 plug-in is affected. The Java Deployment Toolkit plug-in and Java Web Start can also be used as attack vectors.

Reports indicate this vulnerability is being actively exploited, and exploit code is publicly available.

...

Impact

By convincing a user to load a malicious Java applet or Java Network Launching Protocol (JNLP) file, an attacker could execute arbitrary code on a vulnerable system with the privileges of the Java plug-in process.

Solution

Disable Java in web browsers

This and previous Java vulnerabilities have been widely targeted by attackers, and new Java vulnerabilities are likely to be discovered. To defend against this and future Java vulnerabilities, disable Java in web browsers.

> UNQUOTE

This is serious issue that requires us to protect ourselves, your company and your customers, families and friends. Below, are instructions on disabling JAVA in the operating systems and internet browsers. Additionally, mobile devices are at risk as well and I would suggest that you disable java on those devices.

I will send out a notice when the new update is released.

If you have any questions, please let me know by email and I try to answer them.

Best regards,

Greg Evans

K5GTX

INSTRUCTIONS FOR WINDOWS USERS

Starting with Java Version 7 Update 10, a new security feature has been added to Java. Some web pages may include content or apps that use the Java plug-in, and these can now be disabled using a single option in the Java Control Panel.

NOTE: Be sure you have Java Version 7 Update 10 or the instructions below will not work. If you do not have Version 7 Update 10 of JAVA, you can either download from JAVA.COM the latest version or Remove it from the uninstall programs option in the control panel!

Disabling Java through the Java Control Panel will disable Java in all browsers.

Find the Java Control Panel

Windows XP

* Click on the Start button and then click on the Control Panel option.
* Double click on the Java icon to open the Java Control Panel.

Windows 7, Vista

* Click on the Start button and then click on the Control Panel option.
* In the Control Panel Search enter Java Control Panel.
* Click on the Java icon to open the Java Control Panel.

Windows 8
Use search to find the Control Panel

* Press Windows logo key + W to open the Search charm to search settings
OR
Drag the Mouse pointer to the bottom-right corner of the screen, then click on the Search icon.
* In the search box enter Java Control Panel
* Click on Java icon to open the Java Control Panel.

Disable Java through the Java Control Panel

1. In the Java Control Panel, click on the Security tab.
2. Deselect the check box for Enable Java content in the browser. This will disable the Java plug-in in the browser.
3. Click Apply. When the Windows User Account Control (UAC) dialog appears, allow permissions to make the changes.
4. Click OK in the Java Plug-in confirmation window.
5. Restart the browser for changes to take effect.

INSTRUCTIONS FOR MAC OSX USERS

If you do have Java installed on your system and would like to disable it, you can easily do so in the Java Preferences utility. When you open the utility you will be presented with a list of the Java runtimes installed on your system, and a check box next to each. By unchecking the runtimes you will prevent them from being used, and unchecking all will disable Java entirely.

Once disabled, if you have a program on your computer that requires Java, then the program will simply not run until you enable it again. Therefore, while disabling Java does require

an extra step when you want to run Java applications, it does put the control in your hands over what Java programs are allowed to run.

INSTRUCTIONS FOR ALL INTERNET BROWSERS

Disable the Java content in the particular browser

Internet Explorer

The only way to completely disable Java in Internet Explorer (IE) is to disable Java through the Java Control Panel as noted above.

Chrome

1. Click on the Chrome menu, and then select Settings.
2. At the bottom of Settings window, click Show advanced settings
3. Scroll down to the Privacy section and click on Content Settings.
4. In the Content Settings panel, scroll down to the Plug-ins section.
5. Under the Plug-ins section, click Disable individual plug-ins.
6. In the Plugins panel, scroll to the Java section. Click Disable to disable the Java Plug-in.
7. Close and restart the browser to enable the changes.

Note: Alternatively, you can access the Plug-ins settings by typing about:plugins in the browser address bar.

Firefox

1. Click on the Firefox tab and then select Add-ons
2. In the Add-ons Manager window, select Plugins
3. Click Java (TM) Platform plugin to select it
4. Click Disable (if the button displays Enable then Java is already disabled)

Safari

1. Choose Safari Preferences
2. Choose the Security option
3. Deselect Enable Java
4. Close Safari Preferences window

1825. Fwd: Museum Trains are Moving NOW !

Yahoo group: laterisersgroup
Date: 2013-01-18 14:14:37 UTC
From: Michael Long
Topic: 1825 Message: 1825

For those that worked on the Sci-Tech Center station project and
especially the roof crew who had a grand view of the dirt that is
becoming the new Train Museum, I received this message yesterday that
some of the train cars are starting to move north to the new museum.

Apologies, for sending this out late. I meant to send it yesterday.

1827. Greater Houston Hamfest March 23, 2013

Yahoo group: laterisersgroup
Date: 2013-01-20 18:56:29 UTC
From: K5HM
Topic: 1827 Message: 1827
Attachments: 2 described; binary payloads are missing from this source WARC

Laterisers,

Tired of seeing the same old stuff at local hamfests? Take the leap and come on down to Houston. See some new stuff, more stuff and new speakers and presentations, including me!

http://www.houstonhamfest.org/

Saturday March 23, 2013 from 8 AM - 1:30 PM

Online Registration: $6 includes 2 raffle tickets, VIP expedited entry door.. Pre-registration closes March 9th.
At the Door Registration: $10 includes 1 raffle ticket.

This year we'll be giving away an ICOM IC-7000 and tuner as the grand prize. It's a great rig for the new ham and makes a super base station or mobile rig (ask the guy who owns one . . . I earned DXCC with it). Last year Scott almost won the Flex-3000(It was another guy named Scott)!

Yes, this is a 200 watt radio, and requires 42 amps or greater.

1845. Diamond DXCC Challenge

Yahoo group: laterisersgroup
Date: 2013-02-01 04:37:11 UTC
From: K5HM
Topic: 1845 Message: 1845
Attachments: 2 described; binary payloads are missing from this source WARC

Laterisers,

I got my Diamond DXCC Challenge certificate in the mail today. This award was created to commemorate the 75th anniversary of DXCC. When it came out, I decided if to see if I could actually work 100 countries from the original 1937 DXCC list in the year 2012, as required by the rules. It seemed possible but not easy, using only wire antennas and 100 watts.

It was an interesting exercise and fun too. As an amateur student of history and geography, the political changes over the past 75 years created some unique challenges. A lot of entities that were around back then, don't exist today like the Canal Zone or Spanish Morocco. For Spanish Morocco, you had to work someone that was in Morroco but above a certain latitude. For the Canal Zone credit, you needed an HP station that was located within eight kilometers of the Panama Canal.

There were a lot fewer DXCC countries in 1937, so chasing the credits was trickier than it initially seemed. The Leeward Islands in the Carribean were one entity in 1937, today they are seven different DXCC countries. On the other hand, some entities that exist today, didn't count for any country. Gibraltar and Spain were counted as separate credits but Gitmo (KG4) didn't count for any country, not even Cuba! Kaliningrad, a Russian city on the east coast of the Baltic Sea was actually German in 1937 and called Konigsberg. If you worked Kaliningrad, you got credit for Germany, not Russia.

It was a race to the finish line for me. I barely squeaked in under the deadline but I made it. When I tried to explain the adventure and the mystery to the XYL, she said, "that's nice dear."

Wow! Just had my first PSK63 QSO with KJ6NON in California. I was thinking about the European PSK contest this weekend, which is PSK63, so I decided to try it.

Seems like the text comes at you like super speed, even though it is only twice as fast as PSK31. I couldn't keep up with the radio. Usually with PSK31, I can type ahead but with PSK63 I was tired after typing "Name Hr is". Its hard think ahead when you know the radio is waiting for you.

I'll have to build more macros so I have time to think.

Allow me to teach you a great, easy card trick.

You'll need 3 playing cards, 2 black-1 red. When you have them...click link, zoom in and WATCH VERY CAREFULLY.
Practice & you can amaze your friends & become the life of the party! (DO NOT TELL THE SECRET!)

First reports from MARS: What a disappointment! No wildlife, no plants. Not even a Wal-mart! Image shows Curiosity Rover perched on a rock on MARS. You can see the Morse letters on the tire tread. Zoom in on the far righthand tire. Does that count as a contact?

With all the radio gear on the rover, you think they could have included a small repeater for the ham bands.

Yes, what a disappointment that one of NASA's primary concerns wasn't an amateur repeater on Mars. :-) Of course, I would argue that it would be far better to have said repeater in one of the orbiters instead of a rover. Still, without your own Deep Space Network (anyone got a 70 meter dish handy?), the challenge would be pretty extreme and if that doesn't discourage you, the 3 to 21 minute delay (depending on Mars' distance from Earth), in each direction would make using any such repeater a pretty frustrating exercise even if you did manage to hit it. Besides, Mars isn't even on the DXCC list!

There were some folks expressing interest in a CW class on the K5PRK page. Though I've just learned it myself a few months ago, I have over 200 QSO's, WAS-CW and 25 countries (16 confirmed) on CW, and would be glad to do a session or two on how to get started and how to QSO on CW. Really that is all it will take, along with daily computer practice which I will talk about. It would take about 10 minutes to send this paragraph at 10 wpm, so

[AS] de K5WL

The only thing I need is a space and a time. I'm available next Wednesday or either of the next two Saturdays after breakfast, but busy from March through May after that. My house is too far from Plano for this, so if someone has a place we can meet, or if you are just interested in the class, reply here. I'll be at breakfast tomorrow and the meeting Monday to talk about this more. I know it's short notice but I can do it again this summer.

1869. Alternate Breakfast Choice

Yahoo group: laterisersgroup
Date: 2013-02-15 20:11:50 UTC
From: Stan
Topic: 1869 Message: 1869

This is not in any way intended to detract from the current late risers breakfast at Poor Richards. Certainly both the food and company are good there.
However, to call it a "late risers" breakfast when most folks are there well before 6:45 am is a bit of a stretch. For me personally, the novelty of getting up before the sun and
driving to breakfast in the dark has worn rather thin.

So some of us are trying an alternative approach. We are meeting at roughly 9:30am for breakfast at Two Rows Grill in Allen. (For those unfamiliar,
it is at US 75 and Bethany Drive on the northbound access road, right next to the Hilton Garden Inn.) The food and the prices are comparable and it
does not get crazy busy, so a leisurely breakfast is quite possible as no one is trying to rush us out.

If you just love getting up at (or before) the crack of dawn, then the original breakfast is always a good choice. But, if you would rather sleep in a little on your Saturday and still talk radio
over breakfast, please come check us out. Everyone is welcome.

73,
Stan NW5Q

Subject: [laterisersgroup] Late Breakfast This Saturday

This is just a reminder that some of us truly "late risers" will be meeting again for breakfast this Saturday at Two Rows Grill in Allen (US 75 & Bethany Dr.) at roughly 9:30am.
Sleep in a little and then come join us for a very leisurely time of good food and good conversation. Everyone is welcome!.

I would like to pass along my double congratulations to Gary. Not only did he become an Extra yesterday, but in the wee hours this morning he made his first contacts on 160 meters during the CQ WW contest. You can imagine my surprise when about 2:30 this morning I hear this very loud and familiar voice working a couple of stations that (much to my chagrin), I couldn't get to hear me no matter what. Well done Gary! And welcome to the challenges (and fun) of Top Band!

1893. Radio for Sale

Yahoo group: laterisersgroup
Date: 2013-02-25 01:19:01 UTC
From: Darren Mende
Topic: 1893 Message: 1893

Hey All:

I am selling one of my HF radios on eBay and thought I'd let everyone know about it. I am selling to save for a Kenwood TS 2000. The link is below. If you have any questions, let me know.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=300867027970&ssPageName=ADME:L:LCA:US:1123

From: Michael Payne
Topic: 1893 Message: 1900

Hi, Darren!

Welcome to the Kenwood branch of the laterisersgroup! About a month ago, I bought a Kenwood TS-480HX and like everything about it. Kenwood's have great sound and I really like the menu system. My 480 is 200 watts outputwhen using 55 amp or better power supply. I had been looking very seriously at the TS-2000, and almost went with it, but since I have a 440/2m that does crossband repeat, i decided to get the 480because of the additional 100 watts. Gary, KF5PLA, who just got his Extra, has a Kenwood and so do a couple of others. We might have to make everyone sit at a different tableif they aren't Kenwood fans!! I hope you enjoy your new radio when you get it and let me know when you do. Happy Trails and 73,

Michael KE5TJL

1901. K5P Meeting March 2nd

Yahoo group: laterisersgroup
Date: 2013-02-26 01:15:22 UTC
From: Greg Evans, K5GTX
Topic: 1901 Message: 1901

Due to several events occurring on March 2, I will postpone the planning meeting. I will send out a new meeting time/location later this week. Please consider helping the American Red Cross drill on Saturday morning. I did it last year and it was a good event to learn how to team up with other NGOs (Non-government Organizations) and do disaster reconnaissance. I will be attending a different meeting on Saturday morning, so I will not be able to help out with that event. Additionally the ARES training meeting is Saturday afternoon. Also, consider attending one of the breakfasts. Saturday, March 2nd is a busy Ham day!

Thank you and have a great week.

Greg Evans

> Welcome to the Kenwood branch of the laterisersgroup!

I'd love to sit down with a TS-2000 for a while. I've been considering selling what I got and "simplifying" with a TS-2000 with the 2m built-in. With the long-range goal of making it so I could remotely operate the radio from around the house with RigRunner.

It is with sadness that I announce the passing of our current President
Walter Lemons-AE5IT.
Today at Baylor Hospital of McKinney at 1:50pm Walter passed. Walter
fought until he could fight no more. His body just could fight off the
disease. Ham radio was Walter's passion and he now becomes a silent key.

The funereal announcement will be posted on the Yahoo Group once they
have been finalized.

1918. Reminder - Next Dinner Meeting - NEW LOCATION!

Yahoo group: laterisersgroup
Date: 2013-02-28 06:18:19 UTC
From: Stan
Topic: 1918 Message: 1918

I just want to remind everyone that our next dinner meeting will take place this coming Wednesday, March 6th at 7pm.
We are trying out a new location, which is both smoke free and handicap accessible. *We will be meeting at the Fuddruckers on the north side of Grapevine*.
Details may be found here:
http://www.dfwcontest.com/new-meeting-details.html

We have reserved a separate room for our meeting, so a headcount is not really necessary. However, this location can be a little bit tricky to find,
so I will provide a few details to help you. First, let me explain that if you are coming from the east, this is a mere 10 minutes or so from our previous meeting location in the Colony thanks to SR 121 and the light traffic in that direction, so don't let the Grapevine location deter you from attending.
It should also be a little bit closer (and hopefully easier) for some of the folks in the west to participate.

Now most of you are probably not familiar with this Fuddruckers, but I imagine most of you are familiar with the Bass Pro Shop in Grapevine.
If you are coming down SR 121 from the north, you can either exit to SR 26, or Bass Pro Drive. From the south, your best bet is probably Bass Pro Drive unless you
can more easily access SR26 at some point south or west.

Be aware that there is no access to Fuddruckers directly from the southbound SR 121 service road. If you come Bass Pro Drive, you can either enter the Bass Pro parking lot, or come north on US 26.
If you enter the Bass Pro parking lot, go to the north end and you can easily see the Fuddruckers. Similarly, if you come from either direction on SR 26, you will see a Whataburger
just to the north of Bass Pro. Turn in there and Fuddruckers is right behind it. I hope to see many of you there.

If anyone has any questions, please feel free to email me directly.

73,
Stan NW5Q

On April 20 & 21, I have committed to running a technician training at the Lucas Fire Station. Already have about 10 students from CERT and the FD. Looking for several instructors to breakup the training into digestible segments.

Also looking for a VE Team on Sunday afternoon

Looking for a show of (email) hands of who would like to assist. If you can simply let me know when you can be available, I will schedule blocks of time to be respectful of yours!

Here are the blocks:

Saturday 8:30 - noon, 12:45 -4
Sunday 8:30 - noon, 12:45-2:45
3pm VE Test

The more helper's I have the less you will have to do.

Please send me an individual email at tmgurley@...
<mailto:tmgurley%40swbell.net>

Thanks

Walter, as I write this I hope you are sitting at the big radio club meeting in the sky. I know some day we will be reunited at that event. Meantime, your friends who are still active in our current lives will carry on the good works.

73, AE5IT DE K5HM SK SK

I am honored to have had Walter as a friend and colleague in this great service. I last met Walter when he came to Houston about a month ago to consult with some doctors at the Medical Center here. I hope the few hours we spent together renewing our frienship were as heartfelt to him as they were to me.

All,

As you may know, Walter Lemon, AE5IT, president of the McKinney Radio Club, became a silent key Wednesday.

Tonight (Sunday) on the club's weekly net, there will be a callout to honor him. During the net, there will also be an opportunity for anyone wanting to do so to relate any memories of Walter they might have. We will try to record the net and present an audio copy of it to his family. Please feel free to participate in the net tonight and also to disseminate this message to those in the area who have known Walter.

The net is at 8:00pm on 146.74, PL 110.9.

Thanks & 73,

Bob

PS - A callout is a tradition of calling for the Silent Key followed by a message (in code) that the one being called is a silent key. Just follow along and you'll know what to do.

Michael,
Can you post the text below to the Plano bunch for me?

There will an estate sale at the residence of Walter Lemon-AE5IT on Saturday, March 16th from 10am until 2pm and on Sunday, March 17 from 1pm until 4pm.
Items for sale will range from tools, power tools, tool chest, assortment of ham related gear, butternut antenna, table saw, riding lawn mower and more.
Based on what his sister's are saying "they just want to get rid of it".

In case you might be using the ARRL.NET e-mail.

The ARRL IT staff has been notified that Microsoft is blocking e-mail to the more than 20,000 members who use the arrl.net e-mail forwarding service to forward e-mail to Microsoft domains (hotmail.com, msn.com, live.com and outlook.com). In addition, the blockage is also affecting those members of the ARRL's Field Organization and other ARRL volunteers who use an arrl.org alias e-mail address to have e-mail delivered to an address with a Microsoft domain. According to ARRL Information Technology Manager Michael Keane, K1MK, the IT staff is working to have these blocks lifted and e-mail delivery restored to normal operation as quickly as possible.

Incidentally, if you haven't worked Clipperton yet, it may be the easiest DXpedition you will ever get. It's 1700 miles more or less on our time zone, with a gob of operators in all modes and bands 24/7, greyline is good at sunrise and sunset, and the online support is very cool. It's an unpopulated island, so the only way to get it is from dxpeditions.

Look at this site: http://www.tx5k.org/ for operating frequencies, and in particular click on this link: http://www.dxa2.org/ to see in real time or later if you are in the log, and for what bands and modes. Enter my call for an example. It took me about 10 minutes to work them on two bands and modes. I hope this sets a standard for future dxpeditions.

Subject: [NS9RC] Want North Dakota on 20 meters?
To: "NSRC Group" <NS9RC@yahoogroups.com>

**

Here’s a unique opportunity to have some 20 meter CW fun, help some brand-new CW ops make their first contact, and get North Dakota confirmed on 20.

****

My friend Joe, N7IV, is conducting an interesting experiment Saturday. He has a group of 9 people interested in learning CW. He has tutors and plenty of coffee. Their goal is to learn the entire code and get on the air in one day! Joe has spent his career in education, so I’m betting they’ll be able to do it.

****

This story has another interesting aspect to it. They will be operating from the basement of the Red Cross Center in Minot. This building was badly damaged by horrendous flooding two years ago, and is just now becoming operational. (Google “Minot Flood 2011” to learn more about the flood and the damage it caused.)

****

The expectation is they’ll be on the air Saturday starting about 2:00 local time. They'll be on 14.050 using the call K0AJW. The exchange will be RST, Name, and QTH. Also, they will be going very slowly…Joe expects just a few WPM, so each QSO will take some time. And he said their rotor is still out, but the beam is pointed at Chicago. He also said about 3:00 he’ll probably take over, and promised to work stations at normal CW speeds until there are no more to work. They will QSL 100%.
So fire up those radios, break out the hand keys, and get on the air!

****

True enough, especially on 10,12,and 15m. But they do spend a lot of time working only outside North America. For instance, right now on 17m SSB they are only working Europe.
Last night I spent an hour on 40m waiting for them to work North American stations and then the pileup was pretty nasty. 80m was a mess too.
I have to give them credit though, for a portable operation they do seem to have good ears. I managed to work them on 160m SSB with 100 watts and my cloud burner antenna!

From: Damon Koch
Topic: 1933 Message: 1946

I got them on 17 early this morning. I was listening for a while over breakfast and they were working 18.165 listening 5 down. Some operators were being obnoxious so after threatening to go QRT 3 or 4 times, the guy called out an AE3 and said "you may as well QSY, I'm not going to log you." That didn't seem to work so next he just said "down 10". I flipped the VFO down 10 split, and worked him first call from the attic dipole.
It pays to be quiet and listen :)

Darren,
Unfortunately we aren't meeting for late breakfast tomorrow.
Most of us in the small core group that meets at Two Rows are going to
the Irving Hamfest.
The rest I think are going to Poor Richards. We'll probably start it
back up next Saturday.
Two Rows is on the northeast corner of Bethany and 75. Hopefully you
can join us then.

Au contraire Mon ami. Doomsday was a dud but the event was the most successful in club history. We had folks register from all over the world. Some even conducted their own special event using their Doomsday number. I think the certificate idea was a winner. I forget the QSO count but requests for cards are still coming in. I feel sorry for our QSL manager .

Too bad I don't get Popular communications. Can you send me the article?

Okay, just to clarify, my reference was to the actual event being a
dud. That is, we are still here! :-)
I'm pleased to hear the special event was a success. I personally never
heard a single station.
I'll be glad to get you the article.

cool.

John Amodeo (NN6JA) conducted a forum at the Dayton
Hamvention last year in which he discussed how they
put ham radio into the show.

It turns out that both the producers are hams. They
were all excited to have a rig on the set, but then
they decided that wasn't good enough. It had to work!
So they put it together as a station, rather than just
as a prop, including an antenna in the rafters of the
sound stage.

The ARRL even kicked in with books and certificates
to decorate the station portion of his office.

By the way, the callsign used... KA0XTT... know
where they got that?

1963. Late adventures on 20 meters

Yahoo group: laterisersgroup
Date: 2013-03-15 05:14:25 UTC
From: K5HM
Topic: 1963 Message: 1963

Ok, so I am tuning around 20 m tonight about 1030 PM and I hear Kuwait, 9K2GS like he was next door. So I call and call and call but getting nowhere against the east coast bozos who seem to have worked this guy at least nine times before. So I tune up about 20 Khz and there is Senegal 6V7S, so I do the same calling routine and nothing, nada, zip. Besides, I have Senegal anyway, so I turn off the rig and get ready to go to bed.

Now I'm just about ready to go downstairs when I decide to give it one more try. Turn the rig back on; I don't hear 9K2GS any more and 6V7S is silent but I do hear this JY station. It's late and I am not too alert so I figure its another Japan station. I have plenty of those in my log, so I almost pass him up. But it just might be Kyushu Island which I need for IOTA. Funny, though he doesn't sound Japanese.

So I call him and he comes back to me, we swap info and I put him in the log. Bam! It comes up not Japan but Jordan (JY4CI)! I only got a 4X4 report but my North/South antenna bears exactly 90 degrees from him! So not too bad for 7000 miles in the wrong direction!

And that's the way it was.

Good night and

1966. Late Breakfast is Back!

Yahoo group: laterisersgroup
Date: 2013-03-15 15:19:54 UTC
From: Stan Starks
Topic: 1966 Message: 1966

After missing a couple of Saturdays due to conflicts, some of us will once again be meeting for breakfast at Two Rows Grill around 9:30 am. Two Rows is located on the NE corner of US 75 and Bethany Drive in Allen. If you're missing that hour of sleep you lost last Sunday with the time change, you can get it back.
Just sleep in a little this Saturday and then come join us for breakfast. Everyone is welcome!

1969. FW: Geomagnetic Storm Warning

Yahoo group: laterisersgroup
Date: 2013-03-16 03:40:43 UTC
From: Stan Starks
Topic: 1969 Message: 1969

Could make for interesting conditions this weekend.

Space Weather News for March 15, 2013
http://spaceweather.com

INCOMING CME: A magnetic eruption on the sun during the early hours of March 15th hurled a coronal mass ejection (CME) directly toward Earth. NOAA forecasters estimate a 70% chance of polar geomagnetic storms when the CME arrives on March 17th. High-latitude and possibly even middle-latitude sky watchers should be alert for auroras this weekend. Visit http://spaceweather.com for more information and updates.

DON'T MISS THE STORM: Would you like a call when geomagnetic storms are in progress? Storm alerts are available from http://spaceweathertext.com (text) and http://spaceweatherphone.com (voice).

You are subscribed to the Space Weather mailing list, a free service of Spaceweather.com.

1971. Propagation Info - Weg Pages for Ionosonde / Ionogram

Yahoo group: laterisersgroup
Date: 2013-03-16 16:43:12 UTC
From: Patrick Soileau ND5C
Topic: 1971 Message: 1971
Attachments: 1 described; binary payloads are missing from this source WARC

Mike,

Here are some links to pretty interesting stuff
that I found regarding ionosonde and ionograms
after our conversation this morning.

I'd never heard of this stuff until a meeting a
few years ago at which time a Texas Army MARS guy
gave a nice presentation on NVIS. They use the
ionosonde info so they can determine which frequency
choices to make in order to establish HF communications
fairly "locally" (within the State of Texas, for
example, where they might want to talk to one station
300 miles away and maybe another station 900 miles away).

I've attached the presentation, but just in case
it doesn't make it through the list, here's the

URL at which I found the thing:

Texas Army MARS NVIS Propagation:
http://tcares.org/tcares/images/presentations/nvis%20propagation%20theory.pdf

In this area, the best source of information

appears to be the Texas Army MARS web site.

Texas Army MARS solar weather:
https://www.txarmymars.org/resources/solarweather.php
(contains current charts for Austin, TX)

Here's some more general stuff:

Basic information on ionosonde and ionogram:

http://en.wikipedia.org/wiki/Ionosonde
http://en.wikipedia.org/wiki/Ionogram

NOAA ionogram portal:
http://www.ngdc.noaa.gov/stp/iono/ionogram.html

More general info:
http://wiki.contesting.com/index.php/Measuring_the_ionosphere
http://www.wdc.rl.ac.uk/ionosondes/ionogram_interpretation.html

During our discussion, there was also some debate
as to which was closer to Dallas... the ionosonde

site in Florida or the one in Colorado. Here's
what I found:

```
     Distance from Dallas, TX:
          Boulder, Co     899 miles
          Eglin, FL       781 miles
```

All-in-all, some pretty interesting reading.

I have a sliding ladder that is 18ft high when extended (so you could reach up to 20ft easily if you stand near the top), but it is not stand-alone and must be leaned on something.

1980. RE: Last man standing and Ham radio

Yahoo group: laterisersgroup
Date: 2013-03-22 12:58:54 UTC
From: K5HM
Topic: 1980 Message: 1980

FWIW, I watched the recent episode of LMS, which supposedly □featured□ ham radio. My comments are below. I sent them to Gary Pearce, KN4AQ who produces the Ham Radio Now podcasts. Episode 69 of his show had an interview with John Amodeo, the shows producer.

73,
Ron, K5HM
k5hm.ron@...
www.qrz.com/db/k5hm

From: K5HM [mailto:k5hm.ron@...]
Sent: Friday, March 22, 2013 7:42 AM
To: 'Gary Pearce KN4AQ'
Subject: Last man standing and Ham radio

Gary,

I□m not a regular watcher of LMS but I watched it because of the ham radio episode. My review of the show is: ZZZZZZZZZZZZZZZZZZZZ. A sleeper, comatose; not my kind of comedy. The specific show had an unlicensed person, the daughter operating the radio without supervision. Apparently the radio in the basement had been left on with VOX activated. Yes, I know its Hollywood license but bad anyway.

The story line subplot about the daughter needing electronics to survive is lame. Ham radio is not featured in this episode, it is merely a show prop. The show folk could have come up with something better. Even I can suggest some better comedic scenarios, like Mike at Field Day with lots of Murphy□s law experiences. A bike race or Triathlon his company sponsored where ham radio is providing communications. Of course Hams are not part of the writing team.

Feel free to forward this on to Mr. Amodeo. I do not have his e-mail address or just hit the delete key, as I have done with Last Man Standing.

Well as the character Ham Salad famously told Fluke Starbucker in the
Star Wars spoof Hardware Wars. "Relax kid, it's only a movie!"
Or in this case a TV show.

You have to admit it was a nice Icom commercial. That IC-7700 sure
would look great on my desktop. Now if I could just get past that $9K
price tag.
Also, if you watch closely, she's actually using a PTT button, not VOX.

FWIW, I watched the recent episode of LMS, which supposedly "featured" ham radio. My comments are below. I sent them to Gary Pearce, KN4AQ who produces the Ham Radio Now podcasts. Episode 69 of his show had an interview with John Amodeo, the shows producer.

Subject: Last man standing and Ham radio

Gary,

I'm not a regular watcher of LMS but I watched it because of the ham radio episode. My review of the show is: ZZZZZZZZZZZZZZZZZZZZ. A sleeper, comatose; not my kind of comedy. The specific show had an unlicensed person, the daughter operating the radio without supervision. Apparently the radio in the basement had been left on with VOX activated. Yes, I know its Hollywood license but bad anyway.

The story line subplot about the daughter needing electronics to survive is lame. Ham radio is not featured in this episode, it is merely a show prop. The show folk could have come up with something better. Even I can suggest some better comedic scenarios, like Mike at Field Day with lots of Murphy's law experiences. A bike race or Triathlon his company sponsored where ham radio is providing communications. Of course Hams are not part of the writing team.

Feel free to forward this on to Mr. Amodeo. I do not have his e-mail address or just hit the delete key, as I have done with Last Man Standing.

1984. K5P Plano Balloon Festival Special Event Station Planning Meeting

Yahoo group: laterisersgroup
Date: 2013-03-22 16:58:46 UTC
From: Greg Evans
Topic: 1984 Message: 1984

The first planning meeting to discuss this years special event station (SES) is this Saturday. The SES is garnering more and more attention each year that we do this. And I hope for even greater recognition of the work that our clubs do at the PBF.

Why the Special Event Station? Because it is a way to demonstrate what we do for the community. Very few people know how hard we all work supporting community events. The SES is a great way to reach a large number of people and generate interest that can add to our ranks of Amateur Operators. Yes, there is a lot to do at the PBF itself; this is an added task. But not all of us can work the field or do recovery, so this is another venue to show your support. And for those of us who work the event, it is a chance to get together and do what we love for fun.

Please join me at 8:30 am on Saturday, March 23 at the Plano Super Bowl located on the SE side of the Parker Rd and K Avenue (HWY 5) (2521 K. Avenue) in Plano.

If you can't attend, but want to participate or offer suggestions or support, please let me know. We Need Your Help!!!

73 and thank you for your support!

Greg Evans

I was disappointed as well. I was actually surprised to hear it was still on the air as I have seen far better shows canned after a few episodes. Nothing is funny in this show.

But to clarify, she tried to speak into the mic but it didn't work till she found the remote key switch. So it wasn't VOX. But I sometimes leave my radio on as I do work about the house, so that wasn't _totally_ far fetched.

What I expected was her licensed friends to tell her she can't transmit without a license, or whomever heard her not ID would ask for her call sign. That part was very much glossed over and didn't need to be- most hams have their own call sign on some plaque, engraving, mug or certificate in their shack. If they asked, she could look around and give her father's call sign and they'd accept it and move on. How hard would that have been to write into the script? Not hard at all.

The ARRL press release mentioned that there are several licensed hams involved with the show, but apparently none of them were involved with shooting this scene or else they'd likely have tried to "fix" it.

Or maybe it was _way_ worse and this is as good as they could get it without getting fired.

From: k5wl_bill
Topic: 1970 Message: 1987

Stan, I'm hoping to work a lot of the WPX contest this weekend (Friday at 6p to Sunday at 6p with required 12 hours of off time). Would it be helpful to your contest club if I joined it and added my score, or would that just bring the average down? I'm going more for the DX and needed states than the score. I'll be in the rookie category.

Note to those new to contests: to work the WPX contest, just throw out your call, and be prepared to give a signal report (59) and a serial number staring with 001 (give 002 to your next contact, etc.). They will welcome the contact even if you don't submit a log; you don't have to "officially" sign up for the contest or anything. Unlike the ARRL DX contest, all stations work all stations, so call out to stateside or DX stations. You can skip the leading 0's, but they sometimes help the other station recognize what you are sending, since most of their contacts will quickly be in triple digits. Many of these stations will upload to LoTW for a free ARRL or CQWPX accepted QSL, EQSL for a free CQ-accepted QSL, and/or will send a QSL card through Clublog OORS if you pay for postage. They will also QSL direct/SASE or send through buro some time next decade.

Bill,

We would welcome you (and anyone else interested in contesting) to join our contest group. Membership is free and there are no dues. You can sign up online: www.dfwcontest.com
We have all levels of contesters, from category winners to beginners. Our group is as much about participation as it is scores. We have some very capable individuals who are excellent DXers as well as contesters. You will never have a better opportunity to snag some DX, or those missing states, than during a big contest. As I like to say, it is a target rich environment.

In this contest, the multiplier is callsign prefixes and you will hear a lot of special callsigns used. I really enjoy it because I am typically a multiplier for everyone. Best of luck to all who participate. It should be a lot of fun.

One correction however, with the recent time change the contest starts and ends at 7pm local time.

1995. Ham Test Online - New Amateur Radio License Class

Yahoo group: laterisersgroup
Date: 2013-04-01 16:31:30 UTC
From: Patrick Soileau ND5C
Topic: 1995 Message: 1995

This was stolen from the Ham Test Online Facebook page.... :)

Posted April 1, 2013:

I guess by now everyone has heard the news about the new "Ultra" class ham license!!!

Details are still sketchy, but the thing that surprises me the most is
that those Fools over at the FCC actually plan to take away spectrum
from existing hams to carve out frequencies for this new, higher class
of license!

Fortunately they're
giving us plenty of time to develop the new course, as the new
regulations do not go into effect until April 1, 2014.

We
will definitely be offering an Ultra course, but we don't yet have any
idea what it will cost. It's going to depend on the new curriculum,
which is not yet fully defined.

Keep watching (the Hamtest Online) Facebook page for updates!

John, W1AI

Note: The only truth in this post is the words "April" and "Fools"!

1997. TSPOTA KK5W

Yahoo group: laterisersgroup
Date: 2013-04-08 17:32:26 UTC
From: K5HM
Topic: 1997 Message: 1997

The KK5W (K5NGU and K5HM) team made a total of 145 contacts (133 SSB and 12 PSK) from Mustang Island (MISP). We set up and got on the air about a half hour after the start of the contest. We worked 27 parks using mainly 40, 20 and 15.
meters. Our claimed score is 8,478

Band conditions were great. Our best contact was Japan, and he had no idea what were contesting about. We made several contacts that helped our score just because we had the IOTA designator. The Missouri QSO party was running on Saturday, so we logged a few Q's from them to help our score. On 15 meters we ran into he Worked All Poland contest, they were happy to put us in their log, even though we didn't speak Polish, so we did likewise.

There was a constant on shore wind 24/7 of about 15-25mph, Sand eventually go into everything.

We ran into to two hams whose RV's were parked nearby and a troop of girl scouts who were camping there too.

We knocked off about noon Sunday because things slowed down and we had a three hour trip back to HOU.

Definitely a worthwhile trip and a fun contest. Note to Tom WK5DX - Need a shorter name for the contest because "CQ Contest Texas State Parks On The Air" is a mouthful after eight hours.

1998. Last 7 days. - Can you help build a special needs playground?

Yahoo group: laterisersgroup
Date: 2013-04-08 04:59:27 UTC
From: Anthony Burokas
Topic: 1998 Message: 1998

I apologize for the cross-posting, and for those who have heard this before. But we can use all the hands-on help we can get. This'll be the last time I post this.

At the last meeting for the building of Hope Park Frisco, a special needs playground in the area, I found out we are only 45% staffed with volunteers for our 9-day build. There are three shifts a day, and each shift is just four hours.

Can you give us just four hours? http://hopeparkfrisco.org

This park is being built for all kids, but it is designed to accommodate those with physical and developmental impairments. It's completely wheelchair accessible- both the bottom and top sections. It has interactive stations all kids can reach. From music, to lights and sound, as well as physical interactive elements will engage all kids.

If you have the time, and especially if you have any construction or set-building, or painting, or craft service, or even just hospitality, you can help us with building, painting, meals, or even sign-in and registration. We need help everywhere. http://hopeparkfrisco.org

Moreover, if you belong to another group, we are getting down to the wire because the first build day was Friday, April 5th. We build till April 14th. We need hundreds of volunteers across dozens of shifts. 8a-12p, 12:30p-5p, 5:30p-9p. You can bring kids because they'll be daycare, and older kids can help with non-tool tasks. If you have tools we can borrow (they are insured) we need those too.

Lastly, spread the word. As I said, we are far under the volunteers we need for the 9-day build. If you can pass the word along to your church, your HOA, your school, your fraternity, your corporate offices, to help get the word out, and you help bring one more person to help out for one shift, that's a lot more things done that wouldn't have been done without you sharing the need.

I know many people with many different talents who would love the opportunity to make a difference in the lives of children. This special needs playground will certainly do that. Please help. Sign up here (http://hopeparkfrisco.org) and pass the information along to others.

Thank you.

Hello,

I am considering starting HF on a AlexLoop antenna.

It seems to get good reviews.

Has anyone experienced this antenna? What should I expect from it? I don't have enough space for radials, have radiant barrier in the attic, and no tree cover is not good. Also, trying not to draw attention to the X-50 because the HOA board here is not friendly by any means.

Hello, Donovan. I haven't read the reviews, but Bill Krueger - AE5BK has some expertise with magnetic loop antennas, and I believe Van Kozak is installing an MFJ loop antenna soon. You might want to contact them at the PARK meeting next Monday night, or contact both on the PARK 2 meter repeater. I'm sure they will be interested.

Also, look at my QRZ page. I use that MFJ telescoping tower in the picture to hang a 40m/20m fan dipole from. I'm thinking of adding 80m to it by running wires along the fence, but anyway it's worked real well for me, and I just set it up and take it down when I get the time. Also, read your HOA papers. Mine say you can install an antenna with permission (I haven't gotten around to asking yet until my YF is on the board), but on the other hand they have no actual power to fine unless you don't pay your dues.

But a better strategy might be to offer free tech classes to board and HOA members, to let them know how ham radio can help them. They are civic-minded people, after all, and they may even enjoy using ham radio in their neighborhood watches.

Every HOA is different. Mine is similar and has limited remedies for enforcing rules other than actually suing me. Still I am personally experiencing that it can be a wise move to get on the board if you can. However, many HOA's around here have very strict rules that they aggressively enforce, with quickly escalating fines and the ability to even foreclose if you do not pay. If your HOA uses a management company you are likely facing greater difficulty.

Don't know very much about the AlexLoop, but magnetic loops in general work surprisingly well for their small size. Probably better suited for CW/digital modes than for SSB, but it will definitely get you on the air and with a good 10 or 15 meter opening it should allow you to work some DX. The other positive is that it looks to be a very portable antenna, so even if the HOA hassles you, you could easily take it to a park or someplace to operate without a lot of effort.

2005. Looking for a Kindle DX

Yahoo group: laterisersgroup
Date: 2013-04-11 01:07:44 UTC
From: Anthony Burokas
Topic: 2005 Message: 2005

My Father, KL1HB, is an avid reader and when I visited him last, I noted that he had started writing dates on the inside covers of his small collection of sci-fi novels. You see, in Alaska, in the winter, there's ample time to read- perhaps too much time. So he writes the date he completes a book so he doesn't read it again too soon.

My solution? More books. :)
Also, as he nears 70, reading standard paperback text is getting harder.
My solution, bigger text.

And the easiest way he can resize the text, and get more books (including hundreds of classics for free) is with a Kindle.

So if there's anyone out there with an old Kindle DX (the 9" screen with the keyboard at the bottom) that you no longer use, please let me know.

Thanks!

Sorry Greg, I have to totally disagree. In a widespread event - hurricane, tornado, or maybe even some larger terror activity (I hope not), then hams may play a very beneficial role.
But in a highly localized event like what happened in Boston, the very best thing any hams present could do is to simply get out of the way. No need for us. Communications are fine.
Let the pros handle it. The 2 explosions were 50 yards apart. Ham radio has nothing to offer in helping this tragedy. Your go kit is worthless under the circumstances.
If you want to be a first responder, then go be cop or a firefighter. But don't kid yourself that you (as a ham radio operator) can make a difference in a highly localized event like this.
There are many ways we can often help the community, and you are right that we need to be ready to respond to sudden events. But this just isn't one of them.

Topic: 2010 Message: 2012

Sorry, I wasn't clear. The event itself or any localized event was not something that we would respond to. I agree we would get the heck out of the way. But it was an example that we never know what may happen and it could be without warning... That reminder is the reason that I am reviewing that go kit. It was also a great example of NIMS at work.

Thanks,
Greg

From: Patrick Soileau ND5C
Topic: 2010 Message: 2014

Greetings!

I have no idea why people want to hear this kind of stuff, other than out of morbid curiosity. To me, it seems like some type of voyeurism or eavesdropping.

It's only one step above listening to 911 calls, which I think is just slightly short of sinful. The "benefit" of why such recordings are ever made available to the news media and the public simply escapes me.

If anyone has ever been on the phone, either as a caller pleading for assistance at one of the very worst moments of your life, or as an operator who is stressed knowing that this person's welfare could hang in the balance based upon how well you do your job, you might feel as I do,

that this is something thatbrings back memories perhaps

best left in the past.

As for responding, well, that's left up to the local agencies to decide whether or not they need any help with comms. A ham as a first responder because he/she is a ham? Uh, no. There's a place where hams can provide lots of valuable service, but it has to be as a part of the big puzzle. In an instance where the public service communications infrastructure is in part unserviceable for some reason, hams could supplement it. In more remote areas with less infrastructure, hams could also be of some help. In general, though, it's a matter of being called and doing what's asking, not moving in and taking over. At the federal level, hams are no longer asked to provide the long range communications that they once did, primarily due to the introduction of satellite phones. The emphasis now is on providing local, short range, tactical communications. The HSMM-MESH project is an excellent service as it can be of the greatest benefit due to its flexibility. Voice nets are simply not a very effective option. Agencies want the ability to pass pictures... lists... and signed forms. Of course, just like D-STAR, it don't do no good unless there is some sort of infrastructure in place *before* something happens and is needed. PARK *had* one node setup, but had difficulties with it, so it is no more. Perhaps this is an idea which we might consider reviewing and reconsidering?

As always, your mileage may vary. :)

Greg,

Ham radio has a long tradition of service with the Boston Marathon. Hams from the local Minuteman Repeater Association and the Framingham Amateur Radio Club were already spread out along the marathon route. http://www.mmra.org/marc/ .

The marathon started five hours earlier and the elite runners had already finished the race. The explosions occurred near the finish line where there was a concentration of police and medical personnel. In this case area communications, the thing we do best were not impaired. I'm certain that the Hams on - site were well managed, prepared and did what was asked of them. Then got out of the way.

2016. Antenna Raising Party

Yahoo group: laterisersgroup
Date: 2013-04-16 14:07:46 UTC
From: Michael Payne
Topic: 2016 Message: 2016

Hello, everyone!

Volunteers are needed to help install an antenna, coax and ground rod, etc. for Armando Cosentino, N2HGO. Armando is handicapped and has COPD and has been off the air for 6 years since he moved here from Florida. We need about 8-10 able bodied people, and we need someone to be able to drill into the side of his brick wall to mount an antenna mast from a ladder. No climbing on the roof will be required. We could use someone experienced in terminating the 2 coax cables. Any and all help will be greatly appreciated. We are planning the antenna workday for Saturday, April 27, 2013 at 10:00 a.m. at 8508 Wareham Drive, Plano, Texas. We sure do need some help! Please contact Michael Payne, KE5TJL at KE5TJL@... or at 972-335-2437. This is for a good cause!

Thanks and 73,

Michael KE5TJL

Ron,

Yes, I agree.

I basically was guilty of not expressing my thoughts right, as my follow message this morning said. To me it was just a reminder that I needed to have my kit ready so that I could get out of the way, not get into the middle of it and be self-sufficient. I happen to have a separate ham go kit that I would take with me, so that IF ASKED, I would have the resources with me to be of service.

That said, it was interesting to hear NIMS at work. How BPD and BFD organized quickly, started reporting situational information, and requesting resources. It was also interesting to hear the initial confusion, everyone talking over the other and how hard it is to maintain communications discipline during an event.

And I didn't take pleasure from listening to it, I am not one to eavesdrop on 911 calls. I am extremely squeamish when it comes to hearing about pain and suffering. I listened to the recording solely from a learning perspective to understand what goes on with respect to communications when an event occurs (regardless of its cause). I recently participated in a mock exercise that was setup as a similar type of event and the recording was a reinforcement of what I learned from that exercise.

Subject: Re: [laterisersgroup] Boston

Sorry Greg, I have to totally disagree. In a widespread event - hurricane, tornado, or maybe even some larger terror activity (I hope not), then hams may play a very beneficial role.
But in a highly localized event like what happened in Boston , the very best thing any hams present could do is to simply get out of the way. No need for us. Communications are fine.
Let the pros handle it. The 2 explosions were 50 yards apart. Ham radio has nothing to offer in helping this tragedy. Your go kit is worthless under the circumstances.
If you want to be a first responder, then go be cop or a firefighter. But don't kid yourself that you (as a ham radio operator) can make a difference in a highly localized event like this.
There are many ways we can often help the community, and you are right that we need to be ready to respond to sudden events. But this just isn't one of them.

HAMRADIONOW EPISODES 74 and 75: <http://hamradionow.tv/> Online Now

We all know what happened at the Boston Marathon. What didn't make the news is the communications assistance that hams have been providing the event for over 30 hears. It's become one of the largest ham radio public service events in the nation.

This year, hams were operating one of the Net Control stations just a few hundred feet from the bomb blasts near the finish line. HamRadioNow talked to three hams who were involved in different aspects of the event.

Paul Topolski W1SEX was at the Finish Line, supervising the Net Control operation for the hams in that area. Steve Schwarm W3EVE was at a remote location, overseeing another net supporting the First Aid and "fluid" stations, and bus transportation. And Tim Carter W3ATB was at a more distant aid station.

We learn what happened before and after the bombs went off. We also go deeper to understand what goes into Amateur Radio support for a huge operation like this.

HAMRADIONOW is an online podcast from Amateur Radio//Video News. It's free to watch on the web. If you like what you see, we request your support. Just go to our web site, <http://www.hamradionow.tv/> www.HamRadioNow.tv, and 'click the pig.' That'll take you to the support page. Whatever you think it's worth.

Thanks and 73,
Gary KN4AQ

From: vkozak@sbcglobal.net
Topic: 2022 Message: 2022

Hi All. I'm a new PARK member and have had the pleasure of meeting some of you at recent events and breakfasts. I am experiencing severe episodic RFI problems so serious that I cannot operate HF in the evenings and all of some days. The problem is not internal to my QTH. I have no experience or equipment useful in locating the source of the problem and would appreciate any advice or help. Thanks in advance.

Hi Van,

Welcome to our group! I don't have a great deal of experience with RFI problems and there are many possible sources, but the way you describe it, I wonder if one of your neighbors has a plasma TV?
They don't all interfere, but as I understand it, the bad ones are truly awful.

The most basic thing you need to track the RFI source is a portable receiver. The simplest tool is just a portable AM radio. To start, see if you get AM broadcast interference when you get the HF interference. Most simple AM radios have bidirectional antennas, so it may be as simple as determining the direction from your house and then just walking down the block to find the strongest signal. If AM doesn't work, the next step would probably be to use a portable shortwave receiver to attempt the same basic location finding of the problem. Again, AM mode is going to be your best bet as it is most susceptible to noise. If that is still inconclusive, an external directional antenna may be necessary. Another possibility is to use a 2 meter fox hunting setup, assuming you can hear the interference on 2m. There are also much more sophisticated techniques out there, but I recommend that you try these basic things first. I suspect the larger challenge will be to get corrective action once you locate the problem. Let us know how you make out. Good luck!

Van,

If no one has a directional RFI finder (antenna and meter) that you can use, then MFJ has one for $159 and is the model # MFJ-856. I hope that this helps. I hope you can find one to use from someone.

Thanks Stan. I did try and use a portable broadcast AM radio the way you suggest and found that I couldn't isolate a direction. The noise I heard on the portable seemed to be equally loud no matter how far away from the qth that I walked (over a mile). Without an S-meter it was impossible to really judge the amplitude and I found myself wondering if the noise (white noise) that I heard between broadcast stations was the same source as the noise that takes out the hf bands. I think I need a portable AM capable HT that can drop down below 2M. I don't own a portable rig at the moment or I'd walk the neighborhood with it.

Sounds like what you need is a way to dial down the receiving gain (AM radio will crank that up until you hit a carrier) and a way to directionalize the receive. Perhaps the inside of a metal wastebasket or tool box. So it's blocked from the back, and open to the front.

I don't know how to dial down the gain, though. Maybe use your HF radio with a short bit of coat hanger for an antenna. And then spin the dial looking for the loudest frequency.

Did you try killing power to the house (probably did).

And if it's really pervasive, I'd suspect power lines. If it's intermittent, I'd suspect an intermittent problem in a transformer.

2038. OCF dipole

Yahoo group: laterisersgroup
Date: 2013-04-27 23:24:42 UTC
From: Anthony Burokas
Topic: 2038 Message: 2038

I share a fence with a neighbor and one end of the fence is near the feedpoint for my antennas. I'd like ot add a nice OCF antenna and wonder if 6' up is too low (to skim it across the top of the fence.)

My feedpoint is a 4-antenna Ameritron coax switch box. THen, in the shack I have the radio's own internal 3:1 tuner.

Would I need to add something like an external MFJ tuner?
A balun at the feed point of the OCF dipole?

What bands would this be good for?

Topic: 2038 Message: 2039

You don't provide enough detail to be specific. However, I use an 80m
OCF dipole. It is 135 feet long.
Were you to use one of those, first and foremost you need to be sure at
6 feet that no one could touch the antenna while you were transmitting.
You will also need a 4:1 balun at the feedpoint and it should tune and
work (though probably not great) at 6 feet high with just the tuner in
your radio.
It will tune all bands from 80m to 6m. Many specs say it won't tune or
work on15m, but I have hundreds of contacts to Europe, Japan, Asiatic
Russia
and other places that would say that is wrong. If you need a shorter
antenna, then naturally the number of bands covered would be reduced.

Wow. That would be amazing.
For clarity. When it's OCF, how far off center are we talking? Like at the end of it? i.e. how short is the short end?

As for people touching it, I can slope it and make the back end higher.

Or would the whole thing work considerably better if it were higher? And does the 4:1 balun need to be at the antenna's feedpoint (heavy) or could I situate it lower and use ladder line or twin lead to the dipole?

Mine is at an average height of about 30 feet and actually in an "L" configuration instead of straight line so that is not critical.
The higher the better. Though there are multiple designs out there, the typical OCF is fed at the 1/3 - 2/3 point.
My OCF is 135' long, with the legs being roughly 45' and 90' long. The 4:1 balun needs to be right at the feedpoint.

2042. Re: Armando's connections

Yahoo group: laterisersgroup
Date: 2013-04-30 14:02:56 UTC
From: William Fahle
Topic: 2042 Message: 2042

Ok Michael, I can't make it out this Saturday, or the next. I couldn't find an online copy of the installation instructions, but I did find some online reviews. Supposedly that Jetstream JTV680 can get less than 1.5 SWR across all bands and should not require a tuner. However, it had very high SWR (above 6) on some bands, but was acceptable on other bands. I don't remember which bands were which right off hand, but this points to (probably) an antenna problem rather than a cable problem. Even so, a known good cable would be a good idea too. I have one laying around, but am very busy the next two weekends. On the antenna, supposedly there are some measurements that have to be done down to the millimeter. I wasn't there for this part, is it possible the measurements are off? If it's anything like the HF multiband vertical antenna on my car, every little millimeter matters. Tuning that took a long time back and forth with the analyzer. I think this project might take another half day to complete, but probably will require only a ladder and one or two hams.

Also, maybe someone more well versed than me can say whether the two antennas are interacting (the Diamond X30A mounted about a foot or two from the base of the Jetstream), because an SWR of 4.5 on 2 meters (when the 70cm SWR was 1.2) also seems strange to me. Obviously antennas don't have to both be "live" in order to interact, since that is the principle by which directors and reflectors work.

2043. Get your Dutch On

Yahoo group: laterisersgroup
Date: 2013-05-07 21:51:28 UTC
From: Damon Koch
Topic: 2043 Message: 2043

This weekend, May 11 and 12, is Dutch National Windmill and Waterpumpstation Weekend.
Work 6 windmills and get a special award.
http://www.pd6mill.com/
It looks like somewhere around 30 windmills will be on the air, some of them Sunday only.

Damon

2044. Annual Armed Forces Day Coss-band Comm Test on 11 May 2013

Yahoo group: laterisersgroup
Date: 2013-05-07 22:18:28 UTC
From: Greg Evans
Topic: 2044 Message: 2044

The Army, Air Force, Navy, Marine Corps, and Coast Guard are co-sponsoring the annual military/amateur radio communications tests in celebration of the 63rd Anniversary of Armed Forces Day (AFD). Although the actual Armed Forces Day is celebrated on Saturday, May 18, 2013, the AFD Military/Amateur Cross-band Communications Test will be conducted 11 May 2013 to prevent conflict with the Dayton Hamvention (17-19 May 2013), which is the same weekend as the actual Armed Forces Day.

The annual celebration features traditional military to amateur cross band communications SSB voice and Morse Code tests. These tests give Amateur Radio operators and Short Wave Listeners (SWL) an opportunity to demonstrate their individual technical skills, and to receive recognition from the appropriate military radio station for their proven expertise. QSL cards will be provided to those stations making contact with the military stations.

If you think some hams have bad manners today, read this excerpt from the May 1921 issue of QST, Pg 23.

H. G. Mathews, 9ZN, described the bleak situation in Chicago before the war. Acute rivalry between local clubs had resulted in "gangs" in the north, south, and west sides of the city, "each having as a primary object the annihilation of the aerials of the others." The situation had gone from bad to worse. In fact, during the Washington <http://w2pa.net/HRH/cooperation-and-qrm/> 's Birthday tests, someone tore down Mathews' own aerial just before the relay began. A replacement was hurriedly erected and then "two friends sat out under the mast with 38 caliber 'cannons' and chased away exactly eight individuals, each with his little side cutting pliers." Clearly, urban QRM was not the only problem arising from lack of cooperation.

Wow! Ham radio gangs. What a concept.
Kinda makes the 313 boys seem rather tame (except for the shooting of course).

So why in the world are you reading a 1921 issue of QST? Or are you just looking for tips on getting that spark gap xmtr working?

From: Andy
Topic: 2056 Message: 2056

All,

I am going on a mission trip to Guatemala from June 5-11 and I have been authorized to operate while there using the call WA5UP/ TG9.

I probably won't have much time to operate, but I believe Monday June 10 is free time, so I may set up and operate for a few hours that day / evening. I'll most likely operate 20 Meter PSK-31 only as I'll be limited to a buddi-pole with 10 watts.

If anyone is interested in trying to make contact we can schedule an approximate time for the QSO. Hope to catch you guys on the air.

73 de WA5UP

Having a bit of a crisis are we?

First it was eerily quiet about Dayton. Seriously? If you went, you
are probably still talking about it there or on the trip back.
And if not, you are likely here with nothing much to discuss. Any
further discussion is likely to occur next week
when folks return with their war stories, but don't count on it.

Now, it's eerily quiet about Field Day. Well efforts have been underway
for months and if things are mostly nailed down, why would you
expect a whole lot of discussion? Most everything has been addressed
between the PARK website and club meetings.
Maybe you should come to the meeting Monday night and see if it's still
"eerily quiet"?

What's next? Its eerily quiet about Ham-Com?

Perhaps you should be addressing this to either the Field Day or the
official K5PRK yahoo groups, not the laterisersgroup?

Because last year, antenna charts, band plans, bandpass filters and more
were discussed regularly before Field Day. I ran the 2m SSB station.

> Perhaps you should be addressing this to either the Field Day ...
> ... yahoo groups, not the laterisersgroup?

I did that.
I didn't even get a response.

That's why I posted here.

Now I find that the group I was subscribed to is no longer even there.
http://groups.yahoo.com/group/PARKFieldDay
That's from the sig of last year's e-mails.

That would explain why I've not seen anything.

> Having a bit of a crisis are we?
> Seriously?
> What's next? Its eerily quiet about Ham-Com?

I get the impression you feel I'm not allowed to inquire.
A better response would be for you to welcome the interest.

I have two little kids. One is special needs. It takes a lot of effort
for me to carve out time for ONE amateur radio event a year. Field Day
is it. I look forward to it for months on end. So excuse me if I feel
left out. You attitude certainly doesn't help.

Please try your response again.

Last year, there were 83 posts to the Field Day group from January to
now... then 124 more in June.

Aside from the two posts today about the meeting,
there's been only FOUR posts to the group since January.

In my book, four is considerably less than 83.

> Maybe you should come to the meeting Monday night and see if it's
still "eerily quiet"?

If I could, I would. Believe me. I would love to be at all the meetings.
It's just not feasible.

Well it's admittedly from my memory, but I don't believe you've attended
a single club meeting this year. I guess you're also just too darn busy
to visit the PARK website,
because if you had spent 30 seconds there, you would clearly see the
link to the new Field Day Yahoo group that you so desperately seek.
I don't have any issues about folks asking questions. You can inquire
all you want, just don't make it sound like you anticipate some dark
foreboding event and
NEVER mistake the laterisersgroup for some sort of official PARK group.
That's why the K5PRK yahoo group was recently formed.

Yes, I distinctly remember you. Last year you made a huge fuss about 2m
SSB and then you were shocked because there was almost no activity.
Well FYI - There won't be any activity this year either!

I hope you have fun at Field Day. I will be an active non-participant
this year.

Actually, they use pretty high end equipment, so no boat anchors. I heard him tell one person that he was on 14.256.27. Why? I have no idea. Happens on 20m fairly often, but it would be much easier for folks if they would at least pick an even 100 Hz.

One to go for IOTA

Today I received a QSL from Croatia, 9A204W, a special event station. More important, it was from Brac Island, EU-016. Of course Brac is not exactly your popular vacation spot for most tourists but for me it was my 99th IOTA confirmation. It was literally the last contact I logged as AE5NO, March 26, 3011; the next day my vanity call was assigned.

2084. Dayton Hamvention Contest Dinner - Door Prizes - Array Solutions *rocks*

Yahoo group: laterisersgroup
Date: 2013-05-30 00:52:08 UTC
From: Patrick Soileau ND5C
Topic: 2084 Message: 2084

Greetings!

There's been some local discussion regarding recent ham radio events and the prizes donated by vendors to be given away as door prizes at the various events.

Let it hereby known that at this year's Dayton Hamvention, the Saturday night Contest Dinner had *plenty* of prizes, with over $3,000 worth of loot being donated by our own Jay WX0B of Array Solutions right here in DFW.

I was the lucky recipient of one of the very first door prizes awarded... a Rig Expert AA-30 Antenna Analyzer,

a sweet little gizmo worth some $285!
Thanks, Jay & Sharon, for your generosity and continuing support of amateur radio!

73,

Pat ND5C

Ham Com June 7-8 Plano Texas

We hope to see you there!

Hello, It is almost time for Ham Com in Plano Texas June 7 and 8. We are very excited! We even have a bigger booth this year. Look for us in booth spaces 415,414,419,421,322,320. We will be right across from Icom and next to Kenwood. Our goal this year was to bring one thousand radios. We are almost there! We have made some real power buys and will be passing the savings on to you. The manufacturers have authorized deep discounts on many popular models. For those that cant make it..we have got you covered.

We thought it would be fun to stream live video from some of the events we attend. We are going to try it at Ham-Com June 7 and 8th. We are very low tech and not sure how this is going to work out. We have done a few tests and we are pretty sure it is going to work but you never know. At Ham Com this year you will see our crew and the crowd and the stacks of new radios for sale in our booth.Visit our USTREAM channel for live video or if we can pull it off you will see it on our site as well. There should be live chat on too. Be sure and follow us on FaceBook

As you know the manufacturers sometimes authorize pretty deep discounts at the show. These prices can not be advertised on the web or print. We do offer them when available at many shows we attend. We have been authorized to drastically lower prices on many of your favorite models. To make things even more fun and to help you get the gear you want at the best possible price, We have a special phone set up that will be active during the show. From your cell phone dial **MTCRADIO
(When we were testing it we found that we had to pause in between the stars and not dial it too fast) This will ring right in the booth. You can also dial 903-517-6538. You can get the same price as if you were standing there. This special line will only be active during

the show. The prices will only be good during the show. No Back orders and shipping may apply.

MTC is the number one Texas Volume Dealer for Kenwood , Icom, Alinco, Wouxun and more. We want your business.
Again, if you are thinking of a new Kenwood, Icom, Wouxun or Alinco..call the hot line at **MTCRADIO or 903-517-6538 for Hamfest pricing. You will not find these prices anywhere. First Come First Served. No Back orders on these prices.
Our Goal this year is to take One Thousand radios to Ham-Com. As of this writing we have over 900 to take. We will have show Stopping deals on Wouxun Handhelds, ALL Kenwood Models and ALL Icom Models! TS-590, TS-990 480SAT, ID-51A,IC-7000, ID-31A, IC-7200, TM-V71A and more. If you can't make it out be sure and call the hotline **MTCRADIO (That's Star Star MTCRADIO) or 903-517-6538 during the show to get the same deal . Please keep in mind that these show only prices will not be on our website and can not be advertised anywhere.

Whether you are coming to the biggest hamfest in Texas this weekend or you plan to call in, this is your chance to save some big money!

This is very short notice and there is no way to get the word out to everyone in time. Please help us and tell your friends, pass our email along, Like it, and share it on facebook and twitter. Please re post on Blogs and forums and lets get this info out. Most of us are hams, that is what we do!

We are very excited. We have never done anything quite like this. One customer came in the store today. We let him in on the pricing and said he wouldn't miss this for the world. He said he is bringing a chair just to watch the show at our booth!

We are bringing back some of your favorites too like the MTC UV-E5 dual band handheld!

Don't forget, We will take trade ins right there at the event. Bring your clean, late model, working radio and trade it in right there on the spot.

Thanks for your help, thanks for your business and we will see you this weekend! Oh by the way...Tomorrow is MTC's Birthday. On June 4th, four years ago we turned the sign around for the first time. Can you believe it? It has been quite a ride. Thanks to God, to you and good customers like you, we are still here. In just a few short years we have gone from nothing to the number one volume dealer in the state of Texas. It is amazing. We are going to give some of it back this weekend!

From: Michael Long
Topic: 2089 Message: 2089

Hello All,

Please be aware that tonight's meeting for PARK is not going to be in the normal meeting room, Wheelus Hall, but it is going to be in the Sanctuary of Grace Presby.

We were told that "they are working on the floor, and it is sticky. They would like us to move to the sanctuary."

Same location, same time, just different room.

VE testing will be in the same room it normal is held at its normal time at 6pm

Subject: [K5PRK] PARK meeting for 17 Jun 2013 is going to be in the sanctuary.

Hello All,

Please be aware that tonight's meeting for PARK is not going to be in the normal meeting room, Wheelus Hall, but it is going to be in the Sanctuary of Grace Presby.

We were told that "they are working on the floor, and it is sticky. They would like us to move to the sanctuary."

Same location, same time, just different room.

VE testing will be in the same room it normal is held at its normal time at 6pm

Mike

Hello,

This may be a dumb question but I don't care I am going to ask it.

How does one gauge the bands using solar data? Now I ask this because right now we have a SFI of 132 and A index of 11 and K index of 3. That being said the bands have heavy noise on them right now at least at my house.

Is there a piece of data that I am missing... maybe a solar flare or Haley's Comet... or kryptonite in the ham shack? Other then turning on the radio and listening to the bands how can I use the solar data such as on http://www.hamqsl.com/solar.html which tells me that the band is decent whereas it is much the opposite?

73's,
Donovan - W5DWC

This is a fun subject. I would recommend that you visit http://www.hamqsl.com/solar2.html. There is some good information on this site - the PDF Presentation talks about Propagation and is a good snapshot of what you need to know.

Donovan,

Actually this is a very good question that does not really have a great answer. There is certainly no one measure that will reliably tell you what band conditions are, except maybe your ears as you tune.
However there are a number of indicators that will give you an idea of conditions. The solar data you mention provides these factors, but you should consider a multitude of them not just a couple.
Here are the factors I normally look at: SFI, SN, K, A, Bz, SW, and MUF Boulder. Here is a summary of those factors:

10.7 cm Solar Flux Index (SFI) - a good measure of the Sun's activity. The higher the better for the high bands(17-6m) and the lower the better for the low bands (40-160m).
Sunspot Number (SN) - The higher the better for high band propagation, but sunspots are the areas of high magnetic activity on the Sun and are also the source of solar flares and CME's which can really disturb things if we are in their path.
A index - measured every 3 hours. For best propagation we like A to be 3 or less.
K index - The numerical average of the 8 previous A index values. It's best for K to be less than 15.

Those are the commonly mentioned factors, but also consider these:

Bz - This is the Z axis polarity of the Interplanetary Magnetic Field (IMF), which is the Sun's magnetic field transported by the Solar Wind. The Earth's magnetic field has a North polarity.
so when the IMF also has a North polarity, you can think of it like the North Poles of 2 bar magnets coming into contact. They repel each other and don't interact much. But when Bz turns South, just like with bar magnets an interaction starts and the IMF starts impacting the ionosphere. It's been recently found that it can actually create connections all the way to the ionosphere at the equator.
When Bz turns negative, the indicator turns yellow and if it gets negative enough it turns red.

SW - The velocity of the Solar Wind also plays a role and is an indicator of the Sun's activity. When the SW exceeds 500 km/s, things start to get disturbed and the indicator turns yellow. If it exceeds 700, it turns red.

Any of the indicators that turn red would suggest that conditions are not ideal.

MUF Boulder - This is the current measured Maximum Usuable Frequency in MHz at Boulder Colorado. We are close enough that it's usually a pretty

good indicator of our conditions. If the MUF is 30+, everything up to
10m is probably open.
If it is say only 13, then even 20m may be
in pretty bad shape.

Also, those band condition indicators are pretty much tied only to SFI
plus the A and K indices. They do not seem to consider other factors.
So as you pointed out, they may show good conditions when the bands are
actually noisy and poor. Also be aware that there are propagation modes
not impacted by the solar numbers that can impact band conditions and
cause unpredicted openings, especially on the upper bands (Sporadic E
and others).

I hope this helps and if you have further questions, feel free to email
me direct. Also, if anyone else has better information to share, please
do so. I've learned enough about propagation to be dangerous, but I do
not claim to be an expert by any means.

I wanted to say that I thought Field Day went swimmingly. Even though I'm not able to regularly make meetings or even the weekly net, I was welcomed and felt that my contributions were valued.

The antenna setups looked very well organized. The radio setups were organized and, aside for wanting a 1/4" to 1/8" headset adapter (so I could use the Heil headset in the kit, and not the uncomfortable inexpensive headsets, the radio setup had everything I needed- even a second pen when the first one started having issues.

I was able to bring and put up my 2m beam with the help of several other hams and it was good to see it put up again. It's been used for field day in two states for over seven years now.

I worked the VHF radio and despite 2m never getting much reach, there was an incredible opening on 6m Sunday morning about 8 am where I was able to pound away at about a contact a minute, sometimes having to work through pileups and lids as the mid-atlantic states boomed in for several hours.

I started with a paper log and also wanted to publicly commend Marvin who sat down and entered several pages of my paper logs into the computer. I was making new contacts faster than he could enter them, and me trying to enter them into the computer while operating is way harder than just writing them down on paper, for me at least. He entered the data for hours, not once complaining about my tricky handwriting. :) Marvin- you rock!

A little after 10am, Kip & his wife too over for me as I needed a brain breather, bathroom break, and a bite to eat. :)

So it was a rocking load of fun. I also got to walk several interested people, even a one-month new licensee, through the setups and the antennas and answer their questions. That was fun too!

Food was great. The location- and not having to have to sweat or get eaten by bugs was great. I was initially worried, but I loved it.

Next year... a 2m loop on a kite or balloon, and put that generator down further behind a wall, and I think we got it made. :)

Greetings!

Not to put too fine a point on it, but....

The "LateRisersGroup" Yahoo! group is *not* owned and/or operated
by the Plano Amateur Radio Klub (PARK), even though a number of
those on this group are members of that organization. It is not
the "offical" e-mail list for, nor does it represent, that group.

The PARK does have an Yahoo! group which is just getting started...

http://groups.yahoo.com/group/K5PRK/

The best source of information for PARK, however, is to visit their web site:

http://www.K5PRK.net/

Patrick,

To set the record straight, the laterisersgroup never was the official email list for PARK nor did it ever claim to represent the PARK club. The laterisersgroup was just that, a late risers group that met on Saturday morning at Poor Richards Restaurant for the good food and camaraderie. The breakfast is just a nice way for 10 to 20+ like minded hams to get together and share information and help other hams. Nothing more than that.

Thanks for letting everyone know about the new PARK yahoo users group. I for one will be joining it very soon.

Your link for the K5PRK group took me to the laterisers group.

If the K5PRGK group is just getting started, then was there no K5PRK group before? Or was there one that went away?

Was the LateRisersGroup group the place to find any Plano club members discussing Plano club stuff, before the new K5PRK group?

Thanks for the information about the new "official" group that's getting started...
without knowing about it, and after being on the LateRisersGroup for several years, I don't think my providing a link to Brian for the LateRisersGroup to be able to communicate with members of the Plano group he met at Field Day, including me, was incorrect.

The official group still only has a little over half of the members of the LateRisersGroup so Brian would have more of a chance of actually reaching people he met at Field Day on LateRisersGroup.

The link given for the K5PRK Group works just fine for me and does NOT
go to the laterisers group.
Prior to the K5PRK yahoo group it was expected that all PARK discussions
would take place in the forums section of the PARK website.
That didn't happen and the laterisers group was being co-opted as the
PARK discussion group even though it was not formed for that purpose.
The K5PRK group was created several months ago to address this issue and
has been widely promoted to provide an official yahoo group for PARK.

The problem with providing the laterisers link to your friend is that it
perpetuates the myth that laterisers is somehow affiliated with PARK.
IT IS NOT!
Not all members of laterisers are members of PARK and there is no
requirement to be. I even have a friend in Indiana who is a member.
Your friend should actually be given links to both groups, with an
explanation of the differences between the two.

Dude, I'm not busting your chain. I hover over the link in the e-mail I received with my cursor and you see, in what I pasted, what I got on this end.

here's the message here:
http://groups.yahoo.com/group/laterisersgroup/message/2096

Hover over Pat's groups.yahoo link and tell me what you get.

> providing the laterisers link to your friend is that it
> perpetuates the myth that laterisers is somehow affiliated with PARK.
> IT IS NOT!
> Your friend should actually be given links to both groups, with an

Well, yes. Of course, but I didn't have both till I was corrected on the LateRisersGroup, which mythically was, as you say, co-opted as the PARK discussion group, even though it was not formed for that purpose.

So I admit being unaware that the PARK discussion on the LateRisersGroup wasn't supposed to happen. But the "correction" e-mail could have been phrased... hey, there's a new official club group/list. Join it here! (which I plan on doing... if...)

> Not all members of laterisers are members of PARK and there is no
> requirement to be.

Is there a requirement that members of the PARK list be members of PARK?

I'm on Mesquite's list but not a member. I wanted to join McKinney's list and see what they're up to and get the meeting notices, but they forbid it because I wasn't a paid-up member of the club.
So I took it as they didn't want me to see what's going on, so I don't know, so I don't go.

So I formed a "non-denominational" group:
DFW Radio Operators list. Join us: http://yhoo.it/DFW-RO

LateRisersGroup was nice because it was open, I could see what was going on, and make plans to be involved where possible. PARK garnered my appreciation for that and I hope the new PARK list doesn't shut down non-member interest in club activity.

I guess I'll find out soon enough.

Don't hover over anything DUDE, just click the link and see where it takes you..
Worked just fine for me, first time every time.

Are you just ADD or what? I have personally responded to you probably 5 times in the last year that the laterisers was not officially associated with PARK and so have several other folks.
Does it take a brick upside the head for that to sink in? Also, if you would ever bother to go to the PARK website, you might actually have a clue about what's going on with PARK.

The K5PRK group is not closed. Unlike McKinney, you do not have to be a member. No one is trying to shut down any discussion, but simply channel it to an appropriate forum.

Yeah, I've witnessed the "success" of your DFW-RO group. Totally seriously not impressed.

2103. DX Spotting

Yahoo group: laterisersgroup
Date: 2013-07-03 12:45:56 UTC
From: K5HM
Topic: 2103 Message: 2103
Attachments: 2 described; binary payloads are missing from this source WARC

With the proliferation of DX spotting systems, there seems to be a lot of redundant ways to find the DX you need or want.

Are all DX Clusters the same? If not, which is best?

Does it make a difference which to use during a contest versus casual DX-ing? Should I choose one that is based near me (like AB5K) or does it matter?

Some DX clusters are web based like DX Summit and others use Telnet. Is that a factor?

What is your experience? My logging software will support both, so which to use is the choice I face.

73,

Ron, K5HM

k5hm.ron@...

From: William Fahle
Topic: 2103 Message: 2104

This is a good question and I'm curious to hear others' experiences. I didn't know there was more than one dx cluster. I'm hoping to get DXCC before I've been licensed a year. Here are the tools I know about and use regularly (goes beyond your original question but may be useful for others):

dxwatch.com, which is a web page that gives a live list of active spots with their frequencies.

clublog.org has a feature where you upload all your logs, and it tells you the last time entities you need were uploaded (by anyone) to clublog (DX Cluster under clublog tools). It can be a little delayed and may be more useful for finding patterns in an operator's schedule, but the cool thing is it only shows the entities you need personally. QSL Charts is also useful.

hamspots.net For digital modes, I haven't seen anything that beats hamspots.net. It lets you search for EQSL or LoTW users, or any digital mode, for spots within the last 3 days. You can also search for specific states for WAS. Most digital mode software has a way to automatically spot stations, even if you don't work them. Please turn this feature on if you are connected to the internet.

Another resource I use sometimes is the sked page on http://www.obriensweb.com/sked/index.php?board=lotw. The LoTW page will be populated by people who definitely used LoTW, a great way to confirm QSO's without cards for ARRL or CQ awards.

For easy DX nets, I know of two that are active. One is Southern Cross DX Net, 14.2385 MHz daily at around 11:00z (6am-730am local). The other is the 14.247 DX net, daily at around 20:00z (3pm local). To use either one, there is no need to sign up or check in. Just tune and listen for the active DX callsigns, and then wait for the net control to say "callers" or "last two" or similar, and just give the last two letters of your callsign (even if you've never worked the net before). Like I would say "Whiskey Lima" and wait for the net to acknowledge that I'm "on the list" by saying my phonetics back. Then you just wait your turn, when the net control will say "Whiskey Lima, make your call." And you give the callsign of the station you want to call, followed finally by your full callsign twice phonetically. I got Fiji, Mauritius, South Africa and several others this way.

Anyone else have ideas?

2105. Anyone call for an antenna installation?

Yahoo group: laterisersgroup
Date: 2013-07-07 20:41:42 UTC
From: Michael Payne
Topic: 2105 Message: 2105

Hello,

I talked to my friend, D. J. Holden this morning and he asked me to try to get in touch with whoever had called him about an antenna installation that they were wanting. D.J.'s cellphone crashed and burned and he can't remember the telephone number of the person who called him about the project. If anyone was wanting him to install an antenna, please call him again andtalk to D.J. He certainly wants to do the job for you but lost all his information.

D. J.'s phone numbers are as follows:

Office - 469-586-9300
Cell - 214-449-4354

He asks that whoever it was who called, to give him a call again so he can help you.

Thanks and 73,

Michael KE5TJL

2106. Re: [laterisersgroup] Re: DX Spotting

Yahoo group: laterisersgroup

From: Damon Koch
Topic: 2103 Message: 2106

There are also some good DX nets on 40M. One on 7.156 most evenings between 8PM and 9PM they run as many DX callsigns as they can find, and there's always the net-op's friend Danny from South Africa at 9PM. Easy way to get South Africa if the band conditions are right. Easy net, too; just put your call sign on the list when he asks for check-ins, and wait to be called up. Very friendly and informal.
Another net that runs in the overnight hours is the 7.163 net. I've listened in a few times when awake at 3AM. The last net I caught was working Guam and Japan. Guam was just in and out of the mud, so I didn't check in, but again, very informal and friendly net.

Subject: [laterisersgroup] Re: DX Spotting

This is a good question and I'm curious to hear others' experiences. I didn't know there was more than one dx cluster. I'm hoping to get DXCC before I've been licensed a year. Here are the tools I know about and use regularly (goes beyond your original question but may be useful for others):

dxwatch.com, which is a web page that gives a live list of active spots with their frequencies.

clublog.org has a feature where you upload all your logs, and it tells you the last time entities you need were uploaded (by anyone) to clublog (DX Cluster under clublog tools). It can be a little delayed and may be more useful for finding patterns in an operator's schedule, but the cool thing is it only shows the entities you need personally. QSL Charts is also useful.

hamspots.net For digital modes, I haven't seen anything that beats hamspots.net. It lets you search for EQSL or LoTW users, or any digital mode, for spots within the last 3 days. You can also search for specific states for WAS. Most digital mode software has a way to automatically spot stations, even if you don't work them. Please turn this feature on if you are connected to the internet.

Another resource I use sometimes is the sked page on http://www.obriensweb.com/sked/index.php?board=lotw. The LoTW page will be populated by people who definitely used LoTW, a great way to confirm QSO's without cards for ARRL or CQ awards.

For easy DX nets, I know of two that are active. One is Southern Cross DX Net, 14.2385 MHz daily at around 11:00z (6am-730am local). The other is the 14.247 DX net, daily at around 20:00z (3pm local). To use either one, there is no need to sign up or check in. Just tune and listen for the active DX callsigns, and then wait for the net control to say "callers"

or "last two" or similar, and just give the last two letters of your callsign (even if you've never worked the net before). Like I would say "Whiskey Lima" and wait for the net to acknowledge that I'm "on the list" by saying my phonetics back. Then you just wait your turn, when the net control will say "Whiskey Lima, make your call." And you give the callsign of the station you want to call, followed finally by your full callsign twice phonetically. I got Fiji, Mauritius, South Africa and several others this way.

From: Michael Payne
Topic: 2111 Message: 2111

If anyone has a Alinco DM-635T mobile radio or is contemplating buying one, or has a friend who has one, I have the RT Systems RTS-03 USB to Serial Adapter for sale. My radio died an unnatural death, but the software and cable as only been used 3 times.

APK-635 Programming Software and USB-29A for the Alinco DR-635
List Price: $49.00

Includes: APK-635 Software and USB-29A Cable
Software - Program memories and other setting of the Alinco DR-635 radio.
Works with Windows XP, Vista, Windows 7 (32 and 64 bit) or Windows 8 (full version)

USB-29A Cable - USB to 3.5mm stero plug programming cable

I want to sell the cable and software for a lot lower price. Make me an offer.

73,

Michael KE5TJL

Delynda and I are on a board of a charity that will be benefiting the Children's Cancer Foundation. We have a website but it needs to be updated with new dates and events for this year. I do not think there will be a lot of brand new HTML pages, just modifying the data in the existing pages.

It is hard to estimate how much time this will take. I am, guessing about 4 hours to begin with, then maybe an hour or less per week until Christmas.

Is there anyone that would be willing to help with this?

Kip

2123. 2013 IOTA Contest

Yahoo group: laterisersgroup
Date: 2013-07-28 17:38:21 UTC
From: K5HM
Topic: 2123 Message: 2123
Attachments: 2 described; binary payloads are missing from this source WARC

IOTA is my favorite contest but my plans for the IOTA contest this year and what actually happened were totally different.

Initially Matt, K5NGU and I were going to operate on Pelican Island (NA-143) for the contest. That was scrapped when Matt had to go to Canada and I had a fender bender that put my car in the body shop.

So I decided to do the best I could operating from the home QTH, with a little help from Frosty, K5LBU and his Expert Amps 2K-FA on Saturday morning. You know, it is amazing what a little bit of extra RF will do.

My goal was to work as many new islands as I could. I wasn't interested in a score but rather finding island groups that I could add to my IOTA tally. So I spent a lot of time listening. I put about of 3 hrs contest time but not continuously, as other things demanded my attention, including an excellent steak prepared by the XYL and served with a bottle of wine.

Considering that band conditions were bad or terrible depending on your point of view, my efforts during the contest resulted in five more islands(NA-136, NA-045, EU-013, EU-145 and NA-083) and one new country, Jersey(GJ). I considered that a success for the small amount of time I put in to the event. In the run up to the contest the week before, I was able to snag five additional island groups and three new countries, Sicily (IT), Dodecanese (SV5) and Aland (OH0). Plus one new island I worked Sunday morning, PQ5D (SA-027).

I was disappointed by the fact that I was not able to hear Ascencion Is (ZD8LP), although he was on the air the week before. I was looking out for Corsica (TK) and Malta(9H) both of which are very interesting from a historical perspective but no luck, I never saw them on the dx clusters.

I should have enough now to apply for IOTA! Plus my DXCC total confirmed is now at 151. All in all a successful contest for me.

Sometime on Saturday afternoon, I could swear I heard AN-009 (South Sandwich) on 15 meters but he faded before I could call N5XZ. Sorry Al.

That's 0530z (12:30am); I guess you didn't go to breakfast THAT early, hihi. But anyway, congrats on Sicily. Now why is Sardinia a separate DXCC, but Sicily isn't? Oh well, just 11 confirmations to go for DXCC. I'm trying to get it before I've been licensed a year. I figure I'll have to apply before the end of August to make it (licensed Sept 12), but I've worked 120 entities already, so I don't need every single one to confirm. I haven't bothered with the bureau, since I understand that can take up to 2 years. I have 71 through LoTW; the rest were green stamps. Not one card was because someone needs Texas; go figure. It must be nice to live somewhere like Rhode Island.

That's 0530z (12:30am); I guess you didn't go to breakfast THAT early, hihi. But anyway, congrats on Sicily. Now why is Sardinia a separate DXCC, but Sicily isn't? Oh well, just 11 confirmations to go for DXCC. I'm trying to get it before I've been licensed a year. I figure I'll have to apply before the end of August to make it (licensed Sept 12), but I've worked 120 entities already, so I don't need every single one to confirm. I haven't bothered with the bureau, since I understand that can take up to 2 years. I have 71 through LoTW; the rest were green stamps. Not one card was because someone needs Texas; go figure. It must be nice to live somewhere like Rhode Island.

2135. Tom Christian VP6TC Silent Key

Yahoo group: laterisersgroup
Date: 2013-07-30 17:20:46 UTC
From: K5HM
Topic: 2135 Message: 2135

I am personally saddened by the passing of Tom Christian, VP6TC (see the obit below).

I remember working him in September 1958 as VR6TC from my QTH in NYC. It was 2 AM local time and I came completely out of my chair when he came back to my call. I was only 17 at the time.

Of course, I knew that VR6 was a rare contact but I did not know anything more. "You're a 57 and the handle is Tom", he said. I still did not connect the dots until I reached for the Call Book Winter 1958 issue. Then I saw his full name, Tom Christian, Pitcairn Island, South Pacific. So I had to ask. Yes, he was related to Fletcher Christian, the leader of the mutineers of the Bounty. We exchanged information about rigs and weather. I didn't know what to ask about. I was completely stupefied. I'm sure it was not a particularly memorable contact for Tom but it was for me.

I ran upstairs from my basement shack and woke the whole house. My mom said, "that's nice dear" and went back to sleep. When the QSL card came about a month later, the old man took it to work to show his work buddies.

I still have the card, a little the worse for wear hanging on my wall.

The world is a little worse off today for the passing of this piece of living history but I will not forget that night.

73,
Ron, K5HM
k5hm.ron@...

Thanks to Bernie McClenny, W3UR of The Daily DX for the following.

Regards,
Gerry - WD5AAM
CTDXCC DX Coordinator
===

VP6TC/VR6TC, Tom Christian, longtime famous ham from Pitcairn Island, who probably gave most of us that "new one," has passed away, peacefully, on July 7th. Tom was diagnosed with possible Parkinson's and early signs of Alzheimer's/dementia in December, 2009, while on a family visit in New Zealand. His wife, VP6YL/VR6YL, Betty Christian, says his health "deteriorated all too quickly," and the last few months were "cruel ones to watch such a strong, vibrant man reduced to where he was not really aware of his surroundings and then was unable to walk and swallow food or liquid." Tom was buried July 8th in the cemetery on Pitcairn. Lack of available transportation

prevented most of Tom and Betty's children making it back for the funeral. Tom was known as the "Voice of Pitcairn," was an M.B.E., Member of the British Empire, and served on the Pitcairn Island Council as the Governor's Representative for 40 years.

it is pretty simple.

I thought there was a D-Star pay on the website, they pay $50 to the
website or Marvin, and then we tell Fred and he gets them registered.

$50 is a one time fee for the world.

2149. K5P Special Event Station Update

Yahoo group: laterisersgroup
Date: 2013-08-06 01:52:15 UTC
From: Greg Evans, K5GTX
Topic: 2149 Message: 2149
Attachments: 1 described; binary payloads are missing from this source WARC

Hello Everyone;

Thank you for your support and efforts in the Special Event Station K5P for the Balloon Festival.

The Station will be setup in the same location as last year. I have been able to coordinate with the MRC the use of the pop-ups again this year. The MRC will also be providing information and possibly personnel to man the table in front during high traffic times. CERT will also be joining us this year. It will be a great opportunity for their new Hams to get on the air. I have requested a gate pass for the PBF and parking passes like we had last year.

The QSL Card design contest is closing on August 10 and all entries should be emailed to stan@... <mailto:stan@...> . Stan is the QSL Card Coordinator again this year. He did a great job last year! (Thanks Stan!) We will vote on the winner shortly thereafter and get the QSL Cards on order. All operators will receive a QSL card at the event.

The Information about K5P is on the PARK website, including the signup form. It is also published in the McKinney ARC and PARK Newsletters. I have attached a sample newsletter entry. Please pass the word to local clubs and get others to sign up for operator slots.

There will be a contest for the most contacts onsite. The details will be announced later. If you have ideas for sponsors for the operator contest, please let the group know. We will also support operators from other locations, but we really need people to be at the CSU during the days of the event.

We need volunteers for the following:
Coordinator for Operator Contacts Contest
Coordinator of the radio equipment and antennas. We will have three operator positions (two voice and one digital). I will be providing a 30" monitor for the Digital display outside as well as the laptop and sound card in the CSU.
Coordinator of Ice/Drinks/Coolers
Coordinator of Setup and Teardown

Antenna setup will start Friday morning so that we aren't caught out in the middle of the heat. I updated the schedule to reflect a start time of 10:00am and ending at 4:00pm, but it will not take all of that time. As the time draws near, we will update the schedule.

If anyone has any other suggestions or things that need to be taken care of, please let me know.

In the meantime, get those QSL Card entries for the contact to Stan!

Best regards,

Greg Evans
K5GTX

2150. K5P Sign-up

Yahoo group: laterisersgroup
Date: 2013-08-07 03:01:43 UTC
From: Stan Starks
Topic: 2150 Message: 2150

Some of you may have gone to the PARK website recently to sign up to help with K5P only to find the sign-up link broken.
Well, it has recently been fixed, so if you have interest, please go sign-up for a shift or two.

Also, I'm still accepting photos to be considered for this year's QSL card.

Thanks,

Stan NW5Q

2151. Fwd: NASA Says Sun's Magnetic Poles are About to Switch Polarity

Yahoo group: laterisersgroup

Michael,

I have used Signalink and HRD without a problem with the ICOM 7000, ICOM 718 and the Elecraft K3. The USB on the Signalink goes to the computer. Make sure you use a USB port that is on the computer or a powered hub. My computer runs Windows 7/64 bit but I've also run it with XP.

I don't know what you are using for digital software. I have never used DM780. I use FLDigi or Digipan for PSK and MMTTY for RTTY. The Signalink has a jumper board inside that has to be set up for the specific radio you are using. Make sure it is configured for the Kenwood TS-480. It is easy to change out or you can by the modular plugins for the specific radio from DX Engineering.

For CAT control between HRD and the radio I use a separate cable that has an integrated serial/USB port on one end and a radio specific connector on the other one. All my virtual serial ports run the FTDI drivers and I never had an issue with them.

They have an excellent Yahoo group for the signalink products. You can join here.

http://groups.yahoo.com/group/TigertronicsSignaLink/

Hope this helps.

2155. Asking The Experts For Help

Yahoo group: laterisersgroup
Date: 2013-08-08 03:15:25 UTC
From: developer94
Topic: 2155 Message: 2155

I have decided to cut the cable cord. I don't know anything about digital signals, nothing about digital antennas. Anything I think I know is 40 years out of date - please be gentle but feel free to offer advice.

To begin with my subdivision does not have a Home Owners Association, so no hassles raising an antenna here. But I do not know about city ordinances or need for permits - nor even who to call at city hall to check. Do I need to check with cityhall?

I think I will need of a small freestanding tower - possibly 40 feet. I am located 500 feet from one of Plano's giant onion-shaped water towers - I figure it could go either way - lots of ghosting or great signal from the reflector effect of the huge water tower. Did I mention I have no knowledge about digital signals? Yea, I need comments.

I saw that Texas Towers shows three Universal brand, 40 foot, self-supporting for under a $1,000. I did not see anything about installation and I am 40 years too old to be using a gin pole - so installation is mandatory. Running cabling would be part of that but just to the side of the house - I already have interior cables installed.

The tower load will be a digital antenna, maybe a rotator, and a small satellite dish and the cabling runs - so, maybe 40 pounds

I'd guess that PARK would be the best place to gain insight into good and bad suppliers and installers. I know that most clubs don't keep a list of recommended suppliers but the members usually know who sells and installs and who is worth keeping in business. And usually there's one guy who is the repository of all this knowledge - is there one of those jewels in PARK?

Regards

Michael Reaves

Hi, I've looked into this. When it comes to TV antennas, the FCC has made a definitive ruling. There are very few cases where someone can stop you from putting an OTA TV antenna, even on a tower up to a certain height, on your property. This includes HOA's, even condos if you have an exclusive access area like a yard or balcony. They are not even allowed to make you ask permission; this is considered to be overly burdensome on the homeowner. Amateur radio is a little different, in that HOA's can and will restrict you from putting up an antenna, but municipalities are not allowed to prevent you completely from putting up a ham antenna, but they can impose reasonable restrictions.

2158. Re: [laterisersgroup] Re: Asking The Experts For Help

Yahoo group: laterisersgroup
Date: 2013-08-08 19:41:19 UTC
From: Stan Starks
Topic: 2155 Message: 2158

The Telecommunication Act of 1996 virtually eliminated the ability of any entity (including HOA's) from restricting TV antennas and small satellite dishes. Regardless of your HOA restrictions, if you want to place a TV antenna in
your front yard, they can't stop you. Amateur radio is a whole lot different. While PRB-1 went into effect in 1985 to provide guidance to municipalities, it still allows them to restrict antennas for height, aesthetics and safety, which gives them a great deal of latitude. One alarming trend there is that some courts have disappointingly ruled that it is okay to restrict antennas so long as they allow one to participate in some phase of the hobby, So their compromise is that you can put up your VHF/UHF antenna, but not any HF antennas. Not much of a compromise! (HOA's of course are free to restrict whatever they want). The broadcast lobby was well funded and powerful and the Feds wanted to transition to digital TV so they could auction off TV spectrum. All of those factors came together in 1996 to make the Telecommunications Act happen. The Amateur radio lobby is neither well funded nor powerful and there is nothing to be gained by the FCC, so I don't see us ever getting out from under HOA restrictions.

Subject: Re: [laterisersgroup] Re: Asking The Experts For Help

The Telecommunication Act of 1996 virtually eliminated the ability of any entity (including HOA's) from restricting TV antennas and small satellite dishes. Regardless of your HOA restrictions, if you want to place a TV antenna in
your front yard, they can't stop you. Amateur radio is a whole lot different. While PRB-1 went into effect in 1985 to provide guidance to municipalities, it still allows them to restrict antennas for height, aesthetics and safety, which gives them a great deal of latitude. One alarming trend there is that some courts have disappointingly ruled that it is okay to restrict antennas so long as they allow one to participate in some phase of the hobby, So their compromise is that you can put up your VHF/UHF antenna, but not any HF antennas. Not much of a compromise! (HOA's of course are free to restrict whatever they want). The broadcast lobby was well funded and powerful and the Feds wanted to transition to digital TV so they could auction off TV spectrum. All of those factors came together in 1996 to make the Telecommunications Act happen. The Amateur radio lobby is neither well funded nor powerful and there is nothing to be gained by the FCC, so I don't see us ever getting out from under HOA restrictions.

Son of a gun! This really works! DE K6RV

I tried it. The bad batteries will bounce..
The good ones don't.

Watch the video and then try it with a brand new battery and a known dead
one.

Boy this would have save me 100's if not 1000's of batteries over the years
if I had only know this simple test.

WRTC 2014

What??? Unless you have been living under a Ham Radio rock, you probably know what WRTC 2014 means, However, in case there is the remote chance you do not know, the WRTC (World Radiosport Team Championship) is the ham radio equivalent of the Olympics. In 2014 it is the USA's time to host this event. What is it?

A Contest Held every 4 years within the IARU HF Championship

"As equal-as-possible" locations, antennas to determine with all else equal, who are the best operators in the world?

Comprised of 59 two-operator teams with Team Leaders selected on the basis of

performance in contests during a "Qualifying Period"

Learn more Grasshopper.

Well, none of us have to worry about being invited to participate, but
the contesting talent displayed is nothing short of amazing.
Still, I find it very surprising when I look at the current standings to
find myself ranked in the top 75 for the W5 call area. Operating my
puny station
in SSB contests only, it's hard to believe. Still, only the top guy
actually gets to participate.

At least we can hand them out points in next year's IARU HF Championship.

From: Michael Long
Topic: 2168 Message: 2168

Hello Everyone,

It's time once again for the Blackland Triathlon. This is a really fun and easy event that needs a lot of operators to be successful. We need volunteers for all shadow and race positions... probably about 25 - 30 operators again this year. We will need to be onsite at 6:00 a.m. for our briefing, get to your shadows by 6:30 a.m. and the kids race starts at 6:45 a.m. We start releasing some people at 11:00 a.m. and it is usually completely over by 1:00 p.m.

This event is again on Labor day, Monday, Sept. 2nd, 2013 and will be located at the Oak Point Center on Jupiter Rd.

Please contact Erik Fuller, KE5VBO, at ke5vbo@...
<mailto:ke5vbo@...> if you're interested in signing up for this fun event.

Did you know that Ham radio operators were instrumental in developing one of the most successful weapons of WW II?

According to a segment I just watched on the History Channel, the development of the proximity fuse (VT Fuse) for anti aircraft guns was a highly guarded secret. Before the deployment of this fuse in 1943, the only way to shoot down an airplane from a ship was to score a direct hit. Very difficult to do from a moving ship firing at a moving aircraft. With the VT fuse you just had to get in the proximity of the airplane. The fuse transmitted a radio signal that was reflected back to the receiver in the shell from the aircraft. KABOOM!

NO solid state devices back then so the tubes that were used in the oscillator had to withstand being shot out of a gun! 20,0000 * the force of gravity at the moment of firing. 5,000 G's as a result of the shell spin during its flight.

Building a team around the Applied Physics Laboratory (APL) at Johns Hopkins University, Merl Tuve built an alliance of scientists, engineers, military ordnance experts, university science departments, and amateur radio operators who had been experimenting with unique radio gear in the field. HMMM, Field Day experience is really valuable!

From: Michael Long
Topic: 2179 Message: 2181

For those of you who like country music.

I remember when Patty Lovelace (real name Patty Ramey) had the surgery for her vocal chords, but I did not realize that her approach to communication while she could not talk was to get this:

*KD4WUJ

*Her call has since been cancelled, but the story is outlined here:
http://en.wikipedia.org/wiki/Patty_Loveless#Throat_surgery_and_a_new_voice

Might be old news to some, but I just happened across this.

Date: 2013-08-21 21:12:06 UTC
From: Michael Long
Topic: 2179 Message: 2182

Unless my memory is faulty, which is certainly possible, at a club meeting or at a recent club function I thought I heard someone mention that there was a local attorney who is also an amateur radio operator. The discussion I remember hearing was in reference to HOA rules with respect to ham radio operation. I do not remember who was talking about this attorney, but I would like to find out who it is.

I have no specific need at the moment, but I am a board member of an HOA and I would like to be able to have this resource within easy reach.

Mike

Date: 2013-08-23 00:06:33 UTC
From: Michael Payne
Topic: 2185 Message: 2185

Good evening everyone!

I would like to ask for 12-14 people to volunteer for the 2013 CoCoBEST robotic competition on Saturday, October 19th, 2013. It will be located at Curtis Middle School, 1530 Rivercrest Blvd., in Allen, Texas. We will need to be there at 7:00 a.m.
We need several volunteers to communicate through a net to help coordinate the flow of the competition. Anyone can volunteer and is a good way to get your feet wet by helping with the competition. It looks and sounds like a fun event to help with!
There will lunch provided for those who volunteer. Come out and help the Collin County BEST (CoCoBEST)contestants.

There will more information to follow as it gets closer to the actual date. Please send me an email or call to let me know if you are interested.

73 and hope to see you there,

Michael Payne KE5TJL

Topic: 2186 Message: 2186

Interestingly, the UK High Altitude Society is launching a balloon around 5:00 am our time on Saturday. The plan is to lift the payloads to 128,000 feet (at least as high as the Baumgartner jump) Info about the society can be found at

http://ukhas.org.uk/

A blog about the flight can be found at http://www.daveakerman.com/

There will be several links for tracking and watching video for the launch and recovery.

2187. K5P Special Event Station

Yahoo group: laterisersgroup
Date: 2013-09-04 21:47:19 UTC
From: Greg Evans, K5GTX
Topic: 1291 Message: 2187

For the third year, The Plano Amateur Radio Klub (PARK) and McKinney Amateur Radio Club (MARC) will jointly sponsor K5P, Plano Balloon Festival Special Event Station - September 20 - September 22, 2013. The purpose of K5P is to showcase to the public what Amateur Radio is about. It gives the general public an opportunity to see how we operate on HF and VHF/UHF using voice, CW and digital, as well as demonstrating our support of the local community during emergencies.

All local clubs are invited to help. We need operators for HF to sign up! This is a great opportunity to work a Special Event Station and show off your stuff. And don't worry if you just have a technician license. We need your help too and we can get you on the air. To signup, go to http://tinyurl.com/k5pses.

There will have a prize for the most unique, logged contacts made on-site.

Visit www.k5prk.net <http://www.k5prk.net> for more information or contact Greg Evans at K5GTX at Arrl dot net.

Spread the word!

From: kf5fea
Topic: 2206 Message: 2206

I just got done reading QST's Pioneers of wireless on page 68 of the October edition. Although it was a good piece with lots of facts and history it was flawed by the fact it didn't even mention Bob Transformer. Instead it gave credit to the transformer to Faraday. Faraday is most known for building cages to catch radio waves and lightning in. If Faraday invented the transformer why isn't it called the Faraformer?
Also it had a nice piece on Heinrich Hertz but it didn't even mention his contributions to inventing the car rental industry. It's sad to see people getting history wrong like that.
KF5FEA, Rusty.

Raivavae Island (Australs, French Polynesia) - OC-114

This island is literally a dead volcano sticking up out of the Pacific ocean.
It sustains a population of 905 people on 16 km² of land. Its highest point is the top of the dead volcano which is 437 meters high.

There are 5 payphones on the whole island.

From the ARRL Contest Calendar: FLASH!

The Voice of Russia, formerly known as Radio Moscow during the USSR era, will cease shortwave broadcasts as of January 1, 2014. From the 1950s through the 1980s, the station, as Radio Moscow, was a virtual beacon for short-wave listeners (SWLs), many of whom gravitated into amateur radio.

****

As a Novice, I used to listen to Radio Moscow in the 40 meter band at night. My favorite program was the "Moscow Mailbag". Which supposedly answered questions from Americans about everyday life in the "Glorious Soviet Union."

Of course, the questions and answers were pure propaganda and some were patently ridiculous but it was entertaining, if you took it that way. I always had to keep my headphones on because the old man was certain that the FBI would find out and send me to Leavenworth. In the McCarthy era (that would be the 1950's, for you youngsters), Leavenworth was the GITMO of the day.

If you were gutsy enough, you could send a QSL card to Moscow and they would send one back. The old man was suspicious of any mail that went to or came from foreign countries. He was sure that sending a postcard to Moscow would be an invitation for a visit from the FBI. I am sure my name is on some file folder in J. Edgar Hoover's basement somewhere.

2243. Looking for a replacement vertical

Yahoo group: laterisersgroup
Date: 2013-12-31 22:47:14 UTC
From: Anthony
Topic: 2243 Message: 2243

I'm cross-posting this, so my apologies if you get it more than once.

I have a Diamond Antenna CP-6 multiband vertical.
http://www.flqelettronica.it/public/photo/cp6-1.jpg
This image is not my CP-6, just an image so people can see what I'm talking about.

In trying to work with my CP-6 the past few days, it seems 40m resonance is out of band, and untunable, 80m resonance is the width of a hair, out of band, and untunable. 20m is pretty good- tunable and in the right place, 10m is easy- lots of bandwidth. 15m won't tune where I need it to be- resonance is out of band. My HF doesn't have 6m.

I liked the CP-6 because the vertical part, and each tuned radial, the whole assembly, I attached to the top of one of my vertical fence poles. The antenna is situated behind a tree so it's not visible from the street in my HOA. A compromise, to be sure, but it was simple to set up and erect, it is outside, and it got me on the air on multiple bands, and my radio's internal tuner made it usable for the most part.

But to get on the air a bit more these days, it appears that I need to replace it with something that does a better job on 15, 40, & 80m. I have a Butternut, but there's no option to run radials around everywhere, and I simply can't have the antenna down where my little kids will destroy it.

So the entire thing has to sit at the top of the fence post pole.

Recommendations?
Anyone have something used?

I also have a modified Mosley TA-33jr for sale. The boom has been lengthened and I have two directors so, instead of a 3 element beam, it's a 4 element beam, with room for a 5th element. 10m, 15m, & 20m. It's basically two TA-33jr's and a single, long boom pole.
I'd like to get $150 for this.

hi Anthony,
Have you put an analyzer on that CP6 yet? If it used to tune and now won't, I wonder if the ice storm damaged it or maybe loosened one or more connections. It may be worth an hour or two poking around the CP6 if it works (worked) for your yard and the HOA hasn't sent you a letter about it. if you have any decent sized trees in the back, a fan dipole is another possible solution to get you on the air.

73,
Damon K5OCH

2245. need SO239 panel barrel with 4 mounting holes.

Yahoo group: laterisersgroup
Date: 2014-01-04 04:56:17 UTC
From: Anthony
Topic: 2245 Message: 2245

I'm moving my shack and I ran the antenna cable today.
I thought I had a few of these connectors in my pile of junk, but apparently not. I just have the chassis jack with one side set up for soldering.

I'm mounting them onto a wall plate in the room so I can easily disconnect if there's a storm coming through.

Amazon has them, but apparently it's the same seller as on e-bay, direct from China, with 17-20+ days delivery.

http://www.amazon.com/coaxial-adapter-female-SO-239-SO239/dp/B00CX01IYM

I'm hoping someone may have them locally. Just started looking tonight, so I haven't called Texas Towers yet.

From: Anthony
Topic: 2250 Message: 2250

There's a tower with a good sized beam on it at the Heard Museum in McKinney.
Does anyone have information about the station there?

Don't know a lot about it, but it's my understanding that the station was funded by the/ Brandenburg/ Life Foundation, same as the Sci-Tech Discovery Center in Frisco.
Some time back, it suffered a serious lightning strike and hasn't been fully operational since.

2252. Fwd: RE: ENGINEER'S ENGINEER

Yahoo group: laterisersgroup
Date: 2014-01-09 20:54:52 UTC
From: Michael Payne
Topic: 2252 Message: 2252

This is craftsmanship at it's best. Thought you all might enjoy this.

Michael Payne KE5TJL

-------- Original Message --------
Subject: RE: ENGINEER'S ENGINEER
Date: Thu, 9 Jan 2014 12:47:48 -0700
From: Rob MM <robmm76@...>

---

*This takes a lot of ?Brain Power? just to half
way comprehend the time involved in such a project!*

This is remarkable!

*Anybody who has any sense of the dedication to
a job done to the nearest level of perfection,
who sees beauty in such purism of craftsmanship,
who can appreciate the dedication and love of a
person for such an impeccable job, who can
relate to the ability of a single person to do
what Lou has done with after years of
dedication, all these people must applaud Mr.
Louis Chenot for having accomplished such a task.*

*A miniature functioning replica 1932 Duesenberg
by Louis Chenot*

*/No, it's not a real full-size Duesenberg, but
rather a beautifully constructed 35" long
working model made in 1/6 scale./*

*Louis Chenot has spent the past ten years
building this incredibly detailed 1932 SJ
Duesenberg LaGrande dual-cowl phaeton. Not only
does it look good, but the engine runs, the
lights work, the top mechanism functions and the
transmission and driveline are complete. Lou
started his research on this project over fifty
years ago with the purchase of a book and
through the following years collected many
drawings and studied a number of Duesenbergs
while they were being restored, taking photos
and recording dimensions.*

/Here's a shot of the finished car from the side on its specially made display table. The model weighs about 60 pounds./

Lou's 40 year career was spent as a mechanical engineer. In the 1960's he spent 7 years restoring a vintage 1930 Cadillac convertible that was on the show circuit for years, but now he prefers to work on smaller projects in the comfort of his home shop.

/The bodywork is all metal, not fiberglass. Here is the car in Lou's shop before the brass coachwork was primed or painted. Lou is not adverse to remaking a part that doesn't meet his standards. He started over on the especially difficult brass radiator shell nine times./

/Here is the engine removed from the model and sitting on its test stand. The transmission is in the foreground./

Most running models are built at larger scales like 1/3 or 1/4. Working in the smaller 1/6 scale magnifies the problems caused by miniaturizing certain parts. Remember that these scale parts are 1/6 as long, 1/6 as high and 1/6 as deep as real parts, making them 1/6 x 1/6 x 1/6 or 1/216th the volume of the original part. By comparison, a 1/3 scale model is 1/27th the volume and a 1/4 scale model is 1/64th the volume. Further complicating the prospect of building a running engine at that size is the fact that fuel molecules and electricity don't scale. It is very difficult to get tiny carburetors and little spark plugs to work like the big ones.

/Inside the straight eight engine are all the correct parts custom machined to scale from steel, cast iron and aluminum. Here we see the block and crankshaft at the top. Arrayed below the block are the cast iron cylinder sleeves, pistons, wrist pins and assembled connecting rods./

/Even though there would be no way to tell once it is all assembled, the cylinder head shows that Lou didn't cheat. The engine has 4 valves per cylinder--32 totals--just like the real one./

*/Here is the head (before painting) with the camshafts in place--there are 16 lobes on each shaft. (The apparent curve of the upper shaft is

caused by the camera's wide angle lens.)/*

/The gears inside the differential will never be seen by anyone, but Lou cut them as actual hypoid gears like the real one rather than machining simpler bevel gears./

/This is the dashboard and interior with the body primed but not yet painted. Note the detailed instruments and engine-turned finish on the dash./

/The complicated convertible top mechanism is shown in the lowered position before the canvas top material was installed./

L/ouis Chenot (Left) and Joe Martin (Right) inspect progress on the chassis and engine at the NAMES show in Detroit in 2007./

*Lou was presented with a special Lifetime Achievement award by the**craftsmanship museum* <http://www.craftsmanshipmuseum.com/>* in 2009. The model was nearing completion but the engine had not yet run. Now that the engine runs and the model is completed, Lou has been selected as the foundation's "Metalworking Craftsman of the Year." The award includes an engraved award medallion and a check for $2000.00. Lou is the 15th person to receive this coveted annual award. Because it is likely that this could well be the finest running model car ever built in this small a scale, Lou's award this year will be presented as the "Craftsman of the Decade." *

/Please forward this message to anyone you know who likes fine craftsmanship, car models, miniature engines and/or Duesenbergs../

***** Breaking News ****

The Kilowatt Radio Club announced the latest in Ham Radio Awards today. The Miles Per Watts Award. The MPW award is offered at increments of 50, 100 500 1000 and the legal limit (wink, wink), 1500 Watts (the legal limit), with endorsements for SSB, CW and RTTY.

The award may be earned by submitting proof of two way communication with a station that is exactly at the prescribed distance from your QTH. Applicants must submit proof of their location and proof of the contact location, EXACTLY 50, 100, 500 1000 or 1500 miles from their QTH, depending on your power level;50

Miles at 50 watts. 100 miles at 100 watts, 500miles at 500 watts 1000 miles at 1000 watts, 1500 miles at 1500 watts and Unlimited miles at Wink-Wink watts.

Spokesman Melvin Kimpoy. WIOU, president of the Kilowatt Radio Club, announced the award today in a speech before the Middle of Nowhere DX Society in Omaha, Nebraska. Kimpoy explained that KRC members were sick and tired of QRP operators whooping it up about how far they can reach on low power. "They secretly envy guys with more power anyway", said Kimpoy. "So KRC members decided to see if they could step up the game and reward those that are capable of or aspire to a Higher Power, so to speak."

"We have thrown down the gauntlet", said Kimpoy, "Let's see if they are up to the challenge."

QRP'ers and other hams can inquire about detailed rules and applying for the award by e-mailing Kimpoy at Kimpoy@...

From: Michael Payne
Topic: 2257 Message: 2257

Hello, everyone!

I'm very interested in going to the MTC grand opening on Saturday, 2/15/2014 and would like to catch a ride with someone that morning. However, my wife has our only car scheduled for a church function that morning, so I can't get the car to drive to Paris, TX. Is there anyone out there that could pick me up at Frisco and let me ride with them? I'll certainly pay some bucks for gasoline for the trip. I really want to go to see the place and maybe win something (or spend money)! I really would appreciate a ride there.

Have an antenna to test or you want to hook to a radio to see if it works. Bring it to the Oak Point Nature Preserve Park on Saturday, Feb 22 at 9:30 am. I'll bring a radio and analyzer and I am sure others will bring a VHF UHF! See you there, it's going to be a beautiful day! Greg, K5GTX

2260. Seed some antenna help!

Yahoo group: laterisersgroup
Date: 2014-03-04 04:09:37 UTC
From: Michael Payne
Topic: 2260 Message: 2260

Hello, everyone!

I desperately need the assistance of someone with an antenna analyzer and possibly 2 or more roof climbers. My vertical antenna is not performing very well, and I would like someone to test it out with their analyzer. In the event we need to remove the vertical from the roof, we would need at least 2 people to climb up on the roof and take it down. More Hams the better. I cannot get up on my roof anymore because of balance problems as I would fall off the roof. We need some younger roof climbers than me! I would like to schedule this for this Friday or after breakfast on Saturday. That would be Friday, 3/7/2014 or Saturday, 3/8/2014. If anyone could help me out, I surely would appreciate it very much. If you would, please reply to this email or call me if you can help.

Thanks and 73,

2265. for sale: Icom IC-718 w/hand mic $525. / Mosley TA33jr+ (TA34jr)

Yahoo group: laterisersgroup
Date: 2014-03-10 18:44:23 UTC
From: Anthony
Topic: 2265 Message: 2265

Just got it fixed up, tuned up & recalibrated by Cal at HamRepair.
Mine has the DSP in it.
It is a hand-me down from my dad, works great, but I like my Yaesu better.

You're welcome to come by and play with it in my shack first.
Comes with power cable and hand mic.
I can give you the receipt from HamRepair as well.
no box or manual. Asking $525.

I'm up in Frisco.

=======

I also have converted _two_ Mosley TA33jr antennas into one TA34jr+ beam.
Rating of 4.9 out of 5 on EHam.
Mine is a three band (10/15/20) FOUR element beam, with room on the boom
for a fifth element.
It comes with the extra driven element and the extra reflector which you
can cut down and turn into the fifth director if you choose. Or you can
turn it back into two antennas and stack them.

Right now its disassembled in my yard because the HOA has this thing
about big towers and big beams. I really don't know what that's all
about. So I'm hoping to sell it off and get me a nice vertical or
multiband wire antenna.

Spring is coming and if you want to improve your outdoor setup, this
would be a great addition to your shack.

Each TA33jr retails for $300. Asking $200 for these two antennas made
into one big one.

2266. FS: Modified Mosley TA33jr. FOUR element beam

Yahoo group: laterisersgroup
Date: 2014-02-22 02:14:53 UTC
From: Anthony
Topic: 2259 Message: 2266

Apologies if you receive this more than once.

I have the components for TWO Mosley TA33jr antennas that I have modified into one four element beam.
ONE boom that hold one reflector, one driven element, and two directors.
I made it so there's even room for a third director.

Then there are the extra driven element and extra reflector that aren't used.

I used this on my 55' tower, which I sold off because I can't put it up in my HOA.
I don't want to part with the antenna but we're not moving any time soon so the antenna is not doing me any good and I'd rather get some cash and roll that into some new gear that I do want...

Or to TRADE for a multiband HF antenna that does not require radials.

Forward this on to someone you know may be looking for a good deal on a beam.
Interested parties, e-mail me direct.

Thank you.

Michael,

They will not start until next Tuesday night at 7pm CDT and they will
operate for a week like the other W1AW operations.
They should be on all HF bands and modes at some time during the week.

2274. IOTA Quirks

Yahoo group: laterisersgroup
Date: 2014-03-18 14:38:16 UTC
From: K5HM
Topic: 2274 Message: 2274
Attachments: 2 described; binary payloads are missing from this source WARC

When I go to the RSGB IOTA website to upload my latest island confirmation, I often get a message saying. "Fewer than four contacts have been confirmed for this activation." It goes on to say, "You may want to upload another QSO." The final irony comes when the message ends with a statement like, "If this is a highly populated island don't worry about it." How many guys were there on that island anyway? Twenty or thirty? Does that constitute highly populated?

This must be a distinctly British thing. I know that XR0ZR for example, made thousands of Q's from Juan Fernandez. I just can't possibly be among the first 4 guys to upload it to IOTA. It's just not likely. I've never had an issue with these messages. I'm pretty sure, that by the time I actually apply for credit toward the award or endorsement, there are at least five contacts in the IOTA database.

Last September, I got the IOTA 100 and now working on IOTA 200. I'm having a lot of fun working the IOTA programme (British spelling). Even enjoying the unintended humor. As Winston Churchill observed, the USA and Britain are two countries separated by a common language.

Actually working the IOTA system is quite educational. Have you ever heard of the Guano Islands Act? It is a federal law, signed by Millard Fillmore. That alone will give you some clue as to its significance.

Subject: [Tidelands] Re: [tdxs-list] IOTA Quirks [2 Attachments]

Ron, I would say that if the island requires a boat or helicopter to get there is not heavily populated. I would say that Amsterdam or Reunion is not heavily populated but Bermuda or Galveston Islands are. I have not guidance from RSGB or other gurus, so further inquiry might be in order, but I would say that major DXpeditions need to be blessed regardless of how many operators they have, but Vacation operations to Islands count as well populated. They probably do not have definite rules or they would state them, but judge each operation as to whether they need to look at the operation. I guess whether it is North Korea or Vladavostok does not matter to RSGB because though North Korea is rare and Vladavostok is not neither is an Island.

Subject: [tdxs-list] IOTA Quirks

When I go to the RSGB IOTA website to upload my latest island confirmation, I often get a message saying. “Fewer than four contacts have been confirmed for this activation.” It goes on to say, “You may want to upload another QSO.” The final irony comes when the message

ends with a statement like, “If this is a highly populated island don’t worry about it.” How many guys were there on that island anyway? Twenty or thirty? Does that constitute highly populated?

This must be a distinctly British thing. I know that XR0ZR for example, made thousands of Q’s from Juan Fernandez. I just can’t possibly be among the first 4 guys to upload it to IOTA. It’s just not likely. I’ve never had an issue with these messages. I’m pretty sure, that by the time I actually apply for credit toward the award or endorsement, there are at least five contacts in the IOTA database.

Last September, I got the IOTA 100 and now working on IOTA 200. I’m having a lot of fun working the IOTA programme (British spelling). Even enjoying the unintended humor. As Winston Churchill observed, the USA and Britain are two countries separated by a common language.

<mailto:lists@...?subject=Re%3A%20Warning%3A%20%20Crimea> "Joe
Subich, W4TV" k4ik

Consistent with the rules of DXCC, effective with the annexation of
Crimea by Russia today, Crimea in occupied territory or an area "in
rebellion" against the lawful government. As is the case in other

disputed areas like the Turkish Republic of Northern Cyprus, Kosovo, Russian enclaves (Abkhazia and South Ossetia) in Georgia, etc., contacts with stations in those areas should not count for DXCC.

Pending official word from the DXCC desk, Ukrainian callsigns with 'J' as the first letter of the suffix will be removed from the next version of the DXCC database used by DXLab Suite. The call signs effected begin with UR#J through UZ#J, EM#J through EO#J, and U5J.

When announced by Russia, the block(s) of Russian callsigns assigned to the "Crimea Oblast" will also be removed from the Russian entries in the DXCC database used by DXLab Suite.

LotW will need to cancel certificates for any calls in the effected blocks and eQSL.cc will need to apply end dates to any accounts for the same calls.

73,

... Joe, W4TV

2277. FW: Live Broadcast

Yahoo group: laterisersgroup
Date: 2014-03-26 01:14:52 UTC
From: K5HM
Topic: 2277 Message: 2277
Attachments: 2 described; binary payloads are missing from this source WARC

It's time for the <http://w5kub.com/> W5KUB.COM live webcast of Gigaparts "Ham Radio Day"!!

Please join W5KUB.com for our live, online webcast of the Gigaparts Ham Radio Day on Saturday, March 29th in Huntsville, Alabama. Great in-store prizes and online prizes will be awarded. To join the broadcast go to <http://w5kub.com/> http://W5KUB.com where the fun begins! W5KUB will interview various vendors regarding their latest products, special guests, and attendees.

During the live broadcast, online viewers will have the opportunity to meet and chat with other ham radio operators from around the world or chat directly with us at the event and ask questions. You may see some of your friends on the broadcast.

Make sure to register at Gigaparts.com for the Icom IC-7100 HF radio. This Gigaparts sweepstakes prize will be announced on our webcast at 2:00 PM CT on Saturday, March 29th. You will instantly know if you are the winner.

You could also win one of many online prizes awarded during the webcast if your name is called from the registered users in the W5KUB chatroom. As always, you must claim your prize within the specified time frame. In the past year over $10,000 in prizes have been awarded! Of course, no purchase is necessary to win an online prize as W5KUB does not sell any products or services. All prizes are donated from vendors or manufacturers.

Broadcast schedule (all times are subject to change):

* Friday, March 28th 1300 UTC (8:00 AM - 1200 PM CT) Live broadcast of our drive from Collierville, TN to Huntsville, AL.

* Saturday, March 29th 1400 UTC to 2100 UTC (9:00 AM - 4:00 PM CT), Gigaparts Ham Radio Day

* Sunday, March 30th: 1400 UTC to 1900 UTC (9:00 AM - 2:00 PM CT), Live broadcast of our drive from Huntsville, AL to Collierville, Tennessee.

Join our group on Facebook at <https://www.facebook.com/groups/w5kub/> https://www.facebook.com/groups/w5kub/ to keep up with us year-round. Also, please help spread the word by posting this announcement in Facebook and forwarding this message to your ham radio friends that may not have received this message! We'll 'see' you at Gigaparts!

2279. Small Wonder Labs - White Mountain 20 SSB transceiver needs another set of eyes.

Yahoo group: laterisersgroup
Date: 2014-04-01 14:31:16 UTC
From: Anthony
Topic: 2279 Message: 2279

I have a White Mountain SSB radio that I think is under performing, but I have neither the technical know how to test it accurately, or the time to learn how to do it with the certainty that I would like.

If there's a Small Wonder Labs fan out there who could lend a hand and go over the radio, make adjustments, etc. I have the radio and the manual, and even parts from a second radio.

I'd like to use it for Field Day this year as part of the Solar Powered station. So help sooner rather than later would be great!

Let me know.

Thanks!

Michael,

You'll only find him on 14.243. They only have one good antenna and that's for 20 meters.

Your best bet is between 7-9 PM local time.

Good Luck.

2288. PARK in the park event

Yahoo group: laterisersgroup
Date: 2014-04-24 20:08:57 UTC
From: Greg Evans, K5GTX
Topic: 2288 Message: 2288

Please be advised. The National Weather Service (NWS) has asked all event organizers to have a severe weather plan in place due to the weather forecast for this weekend. Ironically, the PARK in the Park event "Are You Ready" was meant to see if we are prepared. Well, basically, the NWS is saying be ready!

With regards to whether PARK in the Park is on or not, I will make a decision based on the confidence level of the NWS weather forecast Saturday morning. I will use this email method, the www.k5prk.net <http://www.k5prk.net> web site and on the 147.180 repeater to provide notification of the decision by Noon, Saturday, April 26th. I tend to err on the side of caution because your safety is of the utmost consideration.

Please be weather aware this weekend. Review your severe weather plans with your families and keep your weather radios handy. If the radios go off, tune into the local media and take appropriate actions.

73,

Greg Evans

Park In
The Park

<http://gallery.mailchimp.com/0d61bb2ec9002f0e9872b8c36/images/icon_event.1.gif>

SUNDAY 1pm - 4pm

April 27, 2014

<http://gallery.mailchimp.com/0d61bb2ec9002f0e9872b8c36/images/icon_info.1.gif>

Come join us at the Oak Point Nature Preserve on April 27th for the Park in the Park event featuring emergency communications. As we all know, spring is typically the most active period for weather in our area. For the month of March, we activated the Collin County ARES SKYWARN net four times. We all should be prepared for the spring storm that brings us power outages, strong winds, hail and flooding or worse.

What does your go kit look like? Typically a go kit should have at least four days of supplies, including medications, as well as personal

necessities like clothing, rain gear, gloves, insect repellant and sun screen. For communications, you should have a minimum of a good HT that works on VHF and UHF. A well-rounded communications kit may consist of HF/VHF/UHF transceiver with a PACTOR, TNC or sound card, a laptop, antennas and a deep charge battery. Moreover, it all should be ready to go at a moment's notice.

Is your kit complete? We will have several go kits, demonstrations using RMS Express to send email using your radio and a lot of fun. Join us on April 27th 1pm - 4pm !

For more information or if you would like to share your special knowledge and personal go kit contact Greg Evans K5GTX <mailto:k5gtx@...> k5gtx@...

2289. PARK in the Park Event

Yahoo group: laterisersgroup
Date: 2014-04-24 20:13:45 UTC
From: Greg Evans, K5GTX
Topic: 2289 Message: 2289

(Let's try this again - the background was removed from the last email.)

Please be advised. The National Weather Service (NWS) has asked all event organizers to have a severe weather plan in place due to the weather forecast for this weekend. Ironically, the PARK in the Park event "Are You Ready" was meant to see if we are prepared. Well, basically, the NWS is saying be ready!

With regards to whether PARK in the Park is on or not, I will make a decision based on the confidence level of the NWS weather forecast Saturday morning. I will use this email method, the <http://www.k5prk.net> www.k5prk.net web site and on the 147.180 repeater to provide notification of the decision by Noon, Saturday, April 26th. I tend to err on the side of caution because your safety is of the utmost consideration.

Please be weather aware this weekend. Review your severe weather plans with your families and keep your weather radios handy. If the radios go off, tune into the local media and take appropriate actions.

73,

Greg Evans

SUNDAY 1pm - 4pm

April 27, 2014

<http://gallery.mailchimp.com/0d61bb2ec9002f0e9872b8c36/images/icon_info.1.g
if>

Come join us at the Oak Point Nature Preserve on April 27th for the Park in the Park event featuring emergency communications. As we all know, spring is typically the most active period for weather in our area. For the month of March, we activated the Collin County ARES SKYWARN net four times. We all should be prepared for the spring storm that brings us power outages, strong winds, hail and flooding or worse.

What does your go kit look like? Typically a go kit should have at least four days of supplies, including medications, as well as personal necessities like clothing, rain gear, gloves, insect repellant and sun screen. For communications, you should have a minimum of a good HT that works on VHF and UHF. A well-rounded communications kit may consist of HF/VHF/UHF transceiver with a PACTOR, TNC or sound card, a laptop, antennas and a deep charge battery. Moreover, it all should be ready to go at a moment's notice.

Is your kit complete? We will have several go kits, demonstrations using RMS Express to send email using your radio and a lot of fun. Join us on April 27th 1pm - 4pm !

For more information or if you would like to share your special knowledge and personal go kit contact Greg Evans K5GTX <mailto:k5gtx@...> k5gtx@...

From: Daryl W. Morgeson
Topic: 2293 Message: 2293

To all who like to contact special events, today is the start of one race in Indianapolis Indiana. It starts today and runs to Saturday. It is the Indy Grand Prix. It is a new race that counts towards the Indy 500 and I think two more races. There are special certificates involved to good luck. Can google for more information and what frequencies and times to try. Have fun.

Daryl,

I assume you're referring to W9IMS. I consider them to be the gold standard of special event stations. They operate for about a week before each of the 3 major races there (Indy 500, Brickyard 400, and MotoGP). Obviously they are also operating during this new race which as you mention will count toward the Indy 500. They have a special QSL card for each race and if you work them for all 3 races you can send for a special certificate as well as the 3 cards. They used to operate from a fantastic contest station in Indy (stacked arrays and 200' towers, etc.) but a couple of years ago the owner of that station (who was a founding member of their club) passed away suddenly and left them scrambling for a place to operate. They now operate from a couple of good stations in the Indy area, but with nowhere near the capabilities of that old station. Still, they remain very easy to work from here even with minimal antennas. Probably 20 and 40 meters are the best bets, but I have also caught them on 17, 10 and even 6 meters. Interestingly enough, they are unable to operate from the Speedway itself, as the grounds are an RF restricted area and no one is permitted to use more than 10 watts.

73,
Stan NW5Q

2318. New HAM Needs Expert Help to Program Her Radio

Yahoo group: laterisersgroup
Date: 2014-06-06 03:12:17 UTC
From: mel.pokorny@...
Topic: 2318 Message: 2318

Hi all!

ok....i purchased the programming software and cable for my Yaesu VX-8DR, downloaded CHIRP (because i have MAC computers and the Yaesu software is for a PC); tried my hand at programming my radio - and i have absolutely no idea what i am doing! even though I am from a highly technical background, i'm not sure about the information i am downloading and not sure where/how it needs to reside on the radio.

so....i am going to need some help if possible. If you have some time and would be able to help me, please email me and lets schedule a time to get my radio fully operational. Please!

I have to work the gun show this saturday and sunday so i will not be able to make bkfst saturday morning. :(will miss seeing everyone so all of you have a piece of bacon for me.

thank you for taking this new HAMer under your wings.

2322. Bill Crook - Silent Key

Yahoo group: laterisersgroup
Date: 2014-06-08 13:50:02 UTC
From: Michael Payne
Topic: 2322 Message: 2322

Member of PARK, Bill Crook -AD5FI - SK

With sad regrets, I must inform you that Bill Crook - AD5FI, a member of the PARK club, passed away Saturday evening, 6/7/14 in the emergency room of a Plano hospital. Bill was on dialysis and had very bad breathing problems. It is unknown at this time what was the cause of his death. Bill was a regular on the PARK repeater and on the Good News Net and was one of the Good Guys. Bill always wanted to go to breakfast on Saturdays with the guys, but was always on dialysis at that time of the morning. He was always cheerful and optimistic and was looking forward to Ham-Com. Please say a prayer for Bill and one for his wife Sandy Crook. She will need our community to help her through the loss and pain. He will be sadly missed.

Michael Payne, KE5TJL

2323. Funeral Arrangements for Bill Crook AD5FI - SK

Yahoo group: laterisersgroup
Date: 2014-06-09 17:47:55 UTC
From: Michael Payne
Topic: 2323 Message: 2323

Dear fellow hams,

Bill Crook - AD5FI - suddenly passed away on Monday, June 8, 2014 in Plano, Texas.

Funeral Services will be held at *2:00 p.m*. on *Tuesday* at Restland Funeral Home. The address of Restland Funeral Home is 13005 Greenville Avenue, Dallas, Texas.

He will be laid to rest in the Garden of Eternity portion of the cemetery.

Bill's wife, Sandy Crook, asks that no flowers be sent. If you want to honor Bill's life and his passing, a donation can be made in his name to Congregation Anshai Torah, 5501 West Parker Road, Plano, Texas, 75093.

If you have any questions or comments or want to send a note to the family, feel free to contact me this afternoon or evening by email or you can call and leave a message at 972-335-2437.

73's Bill.

Regards,

Michael Payne

Hi, just a reminder that you're receiving this email because you have expressed an interest in Main Trading Company. Don't forget to add sales@... to your address book so we'll be sure to land in your inbox!

You may unsubscribe if you no longer wish to receive our emails.

Greetings!

Just a quick note to remind you we are Hours away from the Biggest Hamfest in Texas! June 13 and 14 Thousands of hams will descend on Plano Texas. According to one of the organizers of Ham-Com, It is SOLD OUT! I think there may be some out door tailgate space but you better get there early. This year looks like it is going to be the biggest yet as Ham-Com and the ARRL host the West Gulf and Delta Division's celebration of the ARRL 100 Year Centennial. In attendance will be representatives from ARRL along with special booths and lots of guest speakers and forums.

Hours Of Operation this year
  Friday 8am to 6pm | Outdoor Flea Market Starts 7am
  Saturday 8am to 6pm | Outdoor Flea Market Starts 7am

Thousands of dollars in door prizes will be given away this year!

Make sure to go to the official Ham-Com Website HERE for the latest info.

You can also Download the latest Ham-Com 2014 Brochure HERE

MTC is not affiliated with Ham-Com but since they have extended their Hospitality to us for five years in a row now we thought we would return the favor and help get the word out about this year's event.

MTC is going to make another huge showing this year. First, the first 20 people in the booth Friday and Saturday get a free Kenwood or Icom Tshirt! Thats just for starters. We have lots of giveaways and will even be giving away a new Wouxun KGH-UV8D at the show to one lucky person that has liked our Facebook page

For those that have followed us from the beginning you know we get bigger and better every year. This year is no different. We do have quite a few surprises for the folks attending at the large double sided MTC booth. (actually we need more space)

Joining us this year in the booth are Emmet and Rochelle of RadioWavz antennas. We love working with these guys. If you are thinking about building or buying a wire antenna soon, DONT, at least until you talk
to them. RadioWavz has now become known as the highest quality antenna manufacturer in the USA. Military and government agencies are using their products all over the world. Check out their products now on our site HERE

As you know, MTC always has great deals on MFJ, Ameritron, Cushcraft, Hy-Gain and Vectronics products. This year is really going to be something.
We will be offering The Lowest Pricing Ever heard of and Free Shipping (lower 48 only) on all MFJ, Ameritron, Cushcraft, Hy Gain and Vectronics Products. Free Shipping applies on ALL MFJ brands even the big heavy Ameriton Amps! If you are thinking about a new Ameritron Amp you can save hundreds! If you are considering a new Ameritron Amp or one of those new big MFJ Auto tuners, Analyzer or any of their products don't get one til you talk to us. Even if you cant make it to the event we can still help you!

Also at the event we will be unveiling the newest in the Wouxun Line. The ALL new KG-UV8D. This new HT boasts of a large color screen, cross band repeat with full duplex and the new 2.5 KHZ channel step for commercial users. Quantities are very limited. We could only get 300 and they may be gone Friday.

We will also have one of the newest Boafeng Models in the booth as well as accessories for all Wouxun and Boafeng models. We will also have both Wouxun Mobiles.

We plan on having show stopping deals on Comet, LDG, Heil and maybe, just maybe another new product line.

This year we will have on hand for immediate delivery over 900 Brand new Radios! Kenwood, Icom, Alinco, Wouxun and more

We will have show stopping deals on all Icom Models including the new ID-5100

Kenwoods? Yes. We will be loaded on those too. We will have every model including Three new TS-990's at the show. Thinking about a 990 or a new D710G? We can save you big money. Remember, we have ONE Store Buying Power and we can help you even if you cant make it out to the show.

We have factory authorized show discounts and combine that
with current coupons and MTC discounts. I promise..you will not find a better deal anywhere. If you do let us know.

Trade in's? Well yes, after all, we are a trading company, right? Bring your trade right up to the booth. We are looking for nice, working later model units but will consider almost anything. If you bought it from us, you know we will give you more. Pick out your rig, pay the difference and walk away with that rig you have been saving for.

We will have crazy deals on the new Uniden pre programmed digital scanners including the Home Patrol, BCD-436 and BCD 536. These are awesome units. You have got to check them out.

Thinking about a big rig or Amp? bring cash or check. We can save you even more by not having to pay the credit card fees.

Live out of state? that's even better too. Let us ship it out on Monday and save even more!

We will be streaming Live Audio and video from the MTC booth again this year. We are very low tech and not sure how this is going to work out. We have done a few tests and we are pretty sure it is going to work but you never know. At Ham Com this year you will see our crew and the crowd and the stacks of new radios for sale in our booth.Visit our USTREAM channel for live video or if we can pull it off you will see it on our webpage as well. go there now and see if we are on..HERE

As you know the manufacturers sometimes authorize pretty deep discounts at the show. These prices can not be advertised on the web or print. We do offer them when available at many shows we attend. This is not fair for the ones that live too far away or just cant make it. To make things even more fun and to help you get the gear you want at the best possible price, We have a special phone set up that will be active during the show. From your cell phone dial
**MTCRADIO (When we were testing it we found that we had to pause in between the stars and not dial it too fast) This will ring right in the booth. You can also dial 903-517-6538. You can get the same price as if you were standing there. This special line will only be active during the show. The prices will only be good during the show. No Back orders and shipping may apply.

Please check our LIVE BROADCAST Site HERE for the latest info.

This is a special Ham-Com for us. Main Trading Company of Paris Texas just turned five years old. That is quite a land mark. It has sure been quite a ride. It has been a pleasure serving you. We have always tried to give back and have always tried to help our customers any way we could. After all, you have helped us and made this dream possible. Thanks to you and many customers like you we are still here. We started this thing at the worst possible time. Times are still not that good and we are still here and growing, thanks to you!

This year we have plenty of help in the booth. We are sorry that many of you had to wait in line in years past. Christy, Tammy, Leo, Mike and Matt will all be in the booth as well as myself (Richard). We hope to make it fun and fast. If you need extra time in deciding or have questions, we are here for you.

We thank you for your business and hope to see you or talk to you this weekend. Everybody is talking about this one. I think it is really going to be big. By the way, our retail store will be closed June 12-14. We will see you at the show

2328. Modified Mosley TA34+jr Beam for sale

Yahoo group: laterisersgroup
Date: 2014-06-12 17:15:34 UTC
From: Anthony
Topic: 2328 Message: 2328

I can bring this to HamCom Friday for any interested party...

My modified Mosley TA35-jr three band, FIVE element beam. $200
Gets 4.9 out of 5 stars at e-ham.
The fifth element can be fashioned from the second reflector element
which is included, but not pictured.
It is, in essence, two TA33jr antennas on one extended boom.

Pictures of the antenna in use on a 55? tower can be seen at the link.
Minimal sag. The two boom sections are connected by a dual-reinforced
tube section made by Mosley to facilitate this modification. Tower not
included.
All the elements and the extended boom are included as part of one package.

http://ieba.wordpress.com/2010/07/04/radio4sale

Since HamCom is tomorrow- give me a call or text me today if you want
this antenna so I have time to get it lashed to the van. Price is $200
cash, which is less than one antenna, let alone two, and the parts I had
made to modify it, and shipping, and tax... :)
The boom is assembled and comes as once piece- so be prepared for that.

I went to HamCom in Plano this weekend and found myself hanging out with Hiram Percy Maxim (The Old Man) himself (see attached photo). He looked a little pale as you can see. When I asked, he said he was working himself to death on preparations for the Centennial celebration in July. "I don't get out much", he said.

A couple beers later he was feeling much better and his color improved. We discussed a lot of stuff; propagation, technology, new hams coming into the hobby. I wish I could have taped it. I can't remember it all but he was very interested in the new software defined radios. They reminded him of Old Betsy, his spark gap rig. When I asked about that, he said simply, "No knobs, no buttons, no dials."

I can't remember how the evening ended. I woke up in my hotel room next morning thinking it had all been a dream. Or was it . . .? It seemed so real.

To: PARKFieldDay@yahoogroups.com

Hello to all.

I have a 4x8 table, one fan and four chairs, generator and large cooler for drinks that I can bring Saturday morning around 9:30 - 10:00 a.m. That is the soonest that I can get there with the generator. If that poses a problem, please call me.

Randy Jennings said that he would help me load the generator on Friday night at my home in Frisco. It might be easier if someone else can help us to load the items on Friday night.

I will need help.

I need volunteers to help unload these things Saturday morning because my back will not be up to the task and again on Sunday afternoon, helping me get everything home and unloaded.

I hate to ask for help, but I have to in order to protect my back. I hope everyone understands.

73,

Michael Payne KE5TJL

It is getting closer to Field Day. There are a few more things needed.

8' or 10' Step ladder. For hanging stuff at setup and to use to bridge
some wires over the sidewalk.

Tables. I need 6 free standing 6' or 8' tables to put the radios on. The
picnic tables at the pavilion are not comfortable to sit at for a long
time operating.

I also need 14-20 folding chairs for people to sit in while operating.
Again the picnic tables with no backs on the seats are not good for
sitting at for any length of time.

1 more pop-up type of tent for the GOTA station.

Need a computer with open office or power point to run the slides like
we did at HAMCOM.

Everybody bring an electric fan. A breeze helps it feel cooler.

Let me know what and how many you can bring.

Kip

Kip,

I have a laptop with Open Office (no PowerPoint/Word). If you can use
that to run the slides, please contact me directly at w8ov@....

We obtained a laptop, the one that was used at HamCom, that could be
used. I believe Bill has it.

OK. Go with the one you have, as my laptop still has a lot of personal
files on it.

I did not ask for that one, because I thought it was Marvin's and he
said it did not work any more.

We need to verify. Which Bill?

2337. Estate Radios

Yahoo group: laterisersgroup
Date: 2014-07-09 20:28:02 UTC
From: midnight442@...
Topic: 2337 Message: 2337

I have at my house the estate radios from K3LWJ Michael P Mc Donough.
There are about 8 Heahtkit Radios, SB 401- HW 101 ect. 2 Collins Radios. The radios are in different levels of condition from being tagged as working to being repaired. There are some power supply's, heathkit volt meters, heathkit SWR meters, a Heathkit phone patch.
There are a couple of keys and random radio parts-ie tubes diodes ect.
There are a handful of Bendix King radios and a Alinco hand held.
I cant say if any of the radios work.
It was Michaels wish that the radios would end up in someone's hands who couldn't other wise afford them or someone who would restore and use them.
The radios are free, 1 per person, first come first served. I will show the radios by appointment only. Please contact me at KF5FEA@arrl.net mailto:KF5FEA@arrl.net if you would like to see the radios.

Thanks, KF5FEA, Rusty.

2338. Equipment List

Hello to Everyone,

I have been asked by Sandy Crook to sell off the ham equipment for
Silent Key, Bill Crook -AD5FI. If you are interrested in any of the
items for sale, please send an email to me, and tell me which item
number(s) (example #5 or #33, etc.) you might want. See the attached
PDF list of equipment. There might be some negotiation on prices
available. I will contact Sandy and see if she will accept the offer.
Send me your contact information in the email so Sandy can contact you
and make the necessary arrangements for payment, pickup, or shipping.
Mrs. Crook wants to do it this way. All items are sold as is and are final.

Thank you very much and 73,

Michael Payne KE5TJL

2341. Help to install antenna on roof

Yahoo group: laterisersgroup
Date: 2014-08-12 16:03:06 UTC
From: Michael Payne
Topic: 2341 Message: 2341

Good morning, everyone!

I am looking for one or two people to install a 5' 2m/70cm antenna on my chimney. I am replacing an existing antenna with a larger one. The task will consist of unbolting the old antenna and bolting the new one in place of the old one, and then reconnecting the feedline. I would like to do this anytime between tomorrow and Saturday, after coffee, of course! I have the ladder to get on the roof and all the tools needed to do the job, just need a volunteer or two.

I sure would appreciate any help that someone could give me. I'm too unstable to be getting on the roof anymore. If anyone is interested, please reply to this email or call me at 972-335-2437. I might not be home, so just leave a message on the phone. I surely would appreciate the help.

73,

Michael Payne

Looks like Texas Towers's minute showroom will have some competition.
Maybe HRO is feeling the heat from MTC! and is firing back!

Wow!

Ham Radio Outlet, the worlds largest Amateur Radio product and accessories retailer, announced a new retail Super Store in Plano, TX. This new store will include a multi-thousand foot retail floor plan, which will stock and have on display a vast selection of amateur radio products and accessories. Included within the facility will be a large demonstration area, which will have many of the current amateur radio products connected to antennas for use and display.

Looks like Texas Towers's minute showroom will have some competition.
Maybe HRO is feeling the heat from MTC! and is firing back!

Hi, Ron!
We can still buy out of state from other companies on big ticket items,
but having a local store to get smaller things, tape, pwrpoles, etc.
would be nice to not have to order when you need them. I'm happy that
they're coming to Plano.

Announcement below.

http://www.hamradio.com/news_announcements.cfm

Wow!

Ham Radio Outlet, the worlds largest Amateur Radio product and accessories retailer, announced a new retail Super Store in Plano, TX. This new store will include a multi-thousand foot retail floor plan, which will stock and have on display a vast selection of amateur radio products and accessories. Included within the facility will be a large demonstration area, which will have many of the current amateur radio products

connected to antennas for use and display.

Looks like Texas Towers's minute showroom will have some competition.
Maybe HRO is feeling the heat from MTC! and is firing back!

I'm surprised they're coming to Plano, I'd have expected something in
the middle of DFW, like Irving.
I think they're actually east of 75.

We might have to do so anyhow, even before their move, if the Texas Comptroller audited or otherwise contacted them (which they have been progressively doing with out of state online retailers). In any case, it is too bad that we will get hit by sales tax (I won't get into the use tax thing). But shipping should go down in Texas (and none at all for store pickups).

Hands on convenience for parts would be the best advantage. I often worry about parts I order based solely on a picture and specs that may be misleading for certain specific purposes. Also, it is just plain fun to press the buttons and spin the wheels.

Nothing comes free.

Great point, I've ordered stuff from Amazon and received a cheap knockoff because of their comingling of differently sourced but similar products. To be able to go down and handle a UHF to N adapter and know what I'm buying, that's worth something. Also cheaper than return shipping.

What! You guys never been to Tanner Electronics in Carrollton? You can do all the part fondling you want over there. It’s a family owned business and they are open on Saturday.

Well Tanner's is fine if they have what you want, but virtually every time I've made the drive over there, they are out of what I'm looking for. It's a fun place for sure, but hardly amateur radio related, much more for kit builders and makers. It will be nice to have HRO so close, and unlike Texas Towers,
maybe they will actually keep some basic things in stock like coax and connectors.

Yes, you won’t find a Palstar legal limit tuner there or the FT-1000 on display either but if you want to fondle something, you can and not feel like you are some alien from the planet Zork.

In fact, I think I have seen some Zork looking guys over there.

I could always find any connectors, diodes, project boxes or gazintas I needed. Maybe I had to make a couple trips but it was worth it. There was always enough to get me started. Besides, if you are the kind of ham that I am, I always have to buy at least twice the number of parts needed for the project just to be able to get it working!

Thanks for the spot, I jumped on and I could hear two pileups calling,
but I couldn't hear the JA stations with my limited HOA antennas. Just
lots of static noise.

Tried 10 and 20 as well, nothing there either.

Attachments: 6 described; binary payloads are missing from this source WARC

Hello, everyone!

I have run across this Amateur Radio World Map a couple of years ago, and kept the url in case I ever wanted to get one.

http://www.hamradiomap.com/_mgxroot/index.html

Why don't you look at the items below and tell me if anyone wants to purchase one. No shipping charge (or tax) if we buy 11 or more. We have 5 hams signed up to purchase and we need 6 more people to get an order shipped free. Read the eHam reviews and decide if you want one of these maps. I contacted the ham who is selling them and he said he has about 19 maps, but he expects to receive a new shipment in a couple of weeks.

The map is not laminated or glossy, but printed with a matte finish to reduce glare. He uses heavy stock paper and they come in a mailing tube. The map fits a regular sized cork bulletin board like you would get at Wal-Mart or an office supply.

Let me know by email if you would like to purchase one. If so, then I will need your email address, first and last name, callsign and a telephone number you can be reached at.

Daryl Morgeson, AF5QJ, or myself will take your $10 bill at the PARK meeting on October 20th. Please, CASH ONLY, no checks, etc.

We want this to be really simple to do. When we get all the orders AND $10 for each map, Daryl will order all of the maps. It might take 2 weeks to receive the maps (probably less). Then we'll call or email everyone that ordered a map and get them out at Laterisers breakfast, PARK meeting, etc.

73,

Michael Payne KE5TJL

Hello!

This email reminder is being sent out to get a headcount of the total amount of maps people would like to order. If you are interested in getting one or more, please email me with your first and last name, call sign, email address and a telephone number that you can be reached at. This will make sure that everyone gets their map as promptly as possible.

The map is $10 each if we order more than 11 of them. We have several people who have placed an order for one. Only the man who sells them (in Maryland) is profiting from the order. The lowest price we can get (with free shipping) is $10 each.

Please email me if you would like to order one for your shack.

73,

Michael KE5TJL

Subject: [laterisersgroup] Amateur World Map Group Buy

Hello!

This email reminder is being sent out to get a headcount of the total amount of maps people would like to order. If you are interested in getting one or more, please email me with your first and last name, call sign, email address and a telephone number that you can be reached at. This will make sure that everyone gets their map as promptly as possible.

The map is $10 each if we order more than 11 of them. We have several people who have placed an order for one. Only the man who sells them (in Maryland) is profiting from the order. The lowest price we can get (with free shipping) is $10 each.

Please email me if you would like to order one for your shack.

73,

Michael KE5TJL

Hello, everyone!

I have run across this Amateur Radio World Map a couple of years ago, and kept the url in case I ever wanted to get one.

http://www.hamradiomap.com/_mgxroot/index.html

Why don't you look at the items below and tell me if anyone wants to purchase one. No shipping charge if we buy 11 or more. We have 5 hams signed up to purchase and we need 6 more people to get an order shipped free. Read the eHam reviews and decide if you want one of these maps.

The map is not laminated or glossy, but printed with a matte finish to reduce glare. He uses heavy stock paper and they come in a mailing tube. The map fits a regular sized cork bulletin board like you would get at Wal-Mart or an office supply.

Let me know by email if you would like to purchase one. If so, then I will need your email address, first and last name, callsign and a telephone number you can be reached at.

Daryl Morgeson or myself will take your $10 bill at the PARK meeting on October 20th. Please, CASH ONLY, no checks, etc. We want this to be really simple to do. When we get all the orders AND $10 for each map, Daryl will order all of the maps. It might take 2 weeks to receive the maps (probably less). Then we'll call or email everyone that ordered a map and get them out at Laterisers breakfast, PARK meeting, etc.

73,

Michael Payne KE5TJL

2376. Amateur Map Notice

Yahoo group: laterisersgroup
Date: 2014-10-12 02:55:38 UTC
From: Michael Payne
Topic: 2376 Message: 2376

Hello, hams!

We are getting close to the ordering day for the maps. The very last day to order and pay (cash) for the maps is October 20th. That is the PARK monthly meeting.

Please let me know as soon as possible if you plan to purchase the Amateur World Map. I want to include everyone on the order as much as we can.

Bob DeVance, K5CRX, is taking the names, email, the number of map wanted, and cash for the MARC group. Daryl Morgeson, AF5QJ, and myself will be taking the orders from everyone else at the PARK meeting. Thanks Bob and Daryl!

Daryl will place the order for the maps on October 21st or 22nd. The shipment should take 10 to 14 days to come in. We will hand out your map at the breakfasts, club meetings, etc. as soon as we can. Please include your email so I can notify you when we get your map. Thanks for your cooperation.

73s,

Michael KE5TJL

2378. Tower raising party

Yahoo group: laterisersgroup
Date: 2014-10-16 15:02:01 UTC
From: billfahle@...
Topic: 2378 Message: 2378

Update from K5WL, Bill, on tower project. The tower foundation was poured on October 8th, and the tower is in my driveway. This is a HDX-572 crank-up tilt-over motorized tower which weighs in around 1800 pounds. I have a couple of carts which will support about 1200 pounds each that I will be using on each end of the tower to facilitate moving it about 100 feet to the foundation. I will need about 8-10 guys to help with this at about 10am November 1. The base plate has a lifting winch, and the tower has a motor, so once the tower is in place the rest is easy. The main work will be to guide the tower down the path and make sure it doesn't run away, and then get it in place and bolt it on. I hope to have an antenna put together by then, and cable run, so that once it's up it can be used, but that's perhaps too ambitious. Anyway, any help is most welcomed (RSVP via billfahle@gmail.com):

2380. CQ Worldwide Contest this Weekend (Starts Tonight)

Yahoo group: laterisersgroup
Date: 2014-10-24 18:29:21 UTC
From: Stan Starks
Topic: 2380 Message: 2380

I just wanted to remind everyone that the CQ WW SSB contest (which is the biggest contest of the year) starts tonight at 7pm CDT and runs a full 48 hours.
The solar numbers are very high, so 10 meters should be open all over the place (15M should also have great openings). This is a very easy contest because the exchange is just 59 + 04 (our CQ zone).
You can't work US stations (except Alaska and Hawaii) but everyone else is fair game. While the Tech part of 10M should be jammed, if you are General or higher, do not stop at 28.5.MHz
There will be a bunch of DX higher up the band. This will probably be one of the few times you will see 10M really busy across the entire phone band. Last year I made SSB contacts as high as 29.1MHz, so be sure to tune all the way up. For those of you new to this or only wanting to casually participate, you don't have to worry about submitting a contest log. No one will come after you looking for one and you won't negatively impact the scores of the stations you work. We may not see conditions this good for a very long time, so I hope everyone gets a chance to at least add a few new countries to their log.
If anyone has any questions, feel free to reply to me direct. Good Luck and have fun!

73,
Stan NW5Q

2382. Reminder

Yahoo group: laterisersgroup
Date: 2014-10-31 12:48:56 UTC
From: William Fahle
Topic: 2382 Message: 2382

Just a reminder about the tower-raising tomorrow. I'll be at the breakfast in the morning and it will be afterward at 580 Pearl Cove, Oak Point, TX 75068. No heaving lifting involved; the winch will do all that. The only thing I need is people on each side to guide the tower down a slight incline. It will be on wheels. Safety will be the first priority.

73 de K5WL, Bill in Oak Point.

To: <sidewindersontwo@yahoogroups.com>

Good Morning all,

Just a reminder that we'll be trying to make some PSK-31 contacts this morning on 144.150 MHz.

I am located in North East Texas, Grid Square EM22nd, near Tyler and Longview.

I will start off around 8:00 a.m. with my horizontal Yagi pointed south. I will send a few CQs and then move the beam towards the east and repeat calling CQ.

I can also use a vertical antenna if there is anyone that does not have a horizontal antenna up.

With PSK-31 there is plenty of room for more than one QSO, so feel free to call CQ yourself if you are not hearing (or seeing) anything.

So, there you have it. Hope a few have time to get in there and give it a try this morning.

73

Keith

2389. Fwd: Eugene Chenette Obituary

Yahoo group: laterisersgroup
Date: 2014-12-09 21:14:51 UTC
From: Stan Starks
Topic: 2389 Message: 2389

FYI - For everyone who didn't receive this direct.

Eugene Richard Chenette

July 14, 1928 - December 7, 2014

Eugene Richard Chenette of Allen, TX died peacefully early Sunday, December 7th, 2014. He died at the Medical Center of McKinney surrounded by loving family; his wife Helen, his daughter Karen and his "little sister" Mary Dohlman.

He is survived by the love of his life, his wife of 63 years, 9 months, and 4 days, Helen Chenette, by their daughter Karen Chenette, and four grandchildren; Gavin Wright of Gainesville FL, Roy Schmidt of Colorado Springs CO, Luke and Alexandra Chenette of Plano TX. His brother Louis Chenette of Indianapolis IN. His 'sisters' Mary Dohlman, Nancy Smith and their Mom and his aunt Gertrude Ontjes, and a huge list of very loved nephews, nieces, cousins, 2nd cousins, first cousins once removed, etc. He is preceded in death by his daughter Maria Chenette, his sister Louise Bogart, his mother Freda Chestnut and father Eugene D. Chenette.

Born in Waverly, Iowa, July 14, 1928 to Eugene Dow Chenette and Freda Ontjes Chenette. He enjoyed his childhood in Charles City, Iowa. Graduated from Nashua, Iowa High School in 1946 and then attended Wartburg College in Waverly, Iowa. He taught school in Stillwater Minnesota where he after being properly vetted by her uncle Walter and mother Femicha he married Helen Marie Anderson. Entered the US Air Force and was on active duty for four years during the Korean conflict. On leaving the Air Force, he entered the University of Minnesota where he completed Bachelor, Master and Ph.D degrees in electrical engineering.

He taught electrical engineering for a time at the University of Minnesota, and was consultant to firms like Bell Labs, (etc,) then joined the Engineering faculty at the University of Florida in Gainesville where he became Head of the Department of Electrical Engineering. He also spent a couple years at National Science Foundation. In ? he moved to Niceville FL / Eglin Air Force Base to teach in the UF graduate engineering programs and where his research led to innovations in super high-speed photography and holography.

His Ph.D. dissertation was on noise in junction transistors, an important contribution to understanding the physics of semiconductors. He was a pioneer, leader, and innovator in the emerging field of transistors, integrated circuits, and digital devices.

He earned his first "ham" radio license in 1948 and avidly pursued this hobby for more than 65 years, most recently forming the Aspen Ham Shack

with his ham friends. In 1969 he and Dick Ehrhorn became friends and designed, manufactured and marketed the SIGNAL-ONE, a new "state of the art" multi-band transceiver and is considered by many to be the finest American made communications transceiver ever built. In the past few months he has excitedly mastered his new FlexRadio and related software.

He was active in Kiwanis in Gainesville Florida, Niceville and the Dallas area. He loved the fellowship and the service and outreach and its mission of improving the world one child and one community at a time. He loved reaching out to young people and helping them learn often stopping them on the street or while out with his family to dinner and teaching them about proper shoe knots.

Always very active in his church communities improving them one or sometimes two at a time. In Gainesville he ran the radio broadcast and sound system for the Sunday services, and in Niceville and Plano he and Helen were lay eucharistic ministers. Sensing a need they founded Prime Timers at Christ Church Plano.

The viewing will be at Allen Family Funeral Home in Plano on Wednesday Dec 10th from 6-8p. The service will be at Christ Church Plano on Thursday Dec 11th at 11:30am. Committal will be at Dallas - Ft. Worth National Cemetery on December 17th at 1p.

In lieu of flowers donations may be made to the Retina Foundation of the Southwest http://retinafoundation.org/

2394. Regarding your HAM map

Yahoo group: laterisersgroup
Date: 2014-12-27 03:40:57 UTC
From: Michael Payne
Topic: 2394 Message: 2394
Attachments: 1 described; binary payloads are missing from this source WARC

Hello to all!

Map Tacks, Small, 1/16

This email is about Map Pins.

I just wanted to pass on some information that is related to your Ham map you recently purchased.

I use the 1/16th inch map pins to mark each country (or US states, etc.) on my map. It is a great way to display the places on your map where you have made contacts via radio.

I found several companies online that sell them. Try searching for 'map pins' . They come in boxes of different colors or a box of multicolored pins.

I have found 1 store in the Dallas area that sells map pins. It is called "One Map Place, Inc". The store is at 1620 Surveyor Blvd. in Carrollton, Texas, 75006, and the telephone number is 972-416-7800. They have pins in every color you can think of.

You can also get a multicolored mix of pins from Staples, Office Depot and Hobby Lobby. They are not the small size I prefer to use, but they may be suitable for your use. Prices range from a few dollars to $8 or $9 per hundred. There some other online stores that sell them too.

I just thought that everyone might like to know of these map pins. I am not trying to get up a group to buy in bulk.

I hope that you are enjoying your map as much as I am!

73,

Michael KE5TJL

All,
If anyone is interested, you can get Staples to laminate the map for $12.00 plus tax. The one in Allen (off McDermott - west side of 75) can support items 24" wide.

I think I have one, but I need to know what connector you have, round,
RJ-45 (ethernet sized) or the smaller phone jack sized.

2402. Help a fellow Ham

Yahoo group: laterisersgroup
Date: 2015-01-11 17:26:08 UTC
From: Michael Payne
Topic: 2402 Message: 2402

Hello, everyone!

We have a handicapped ham here locally that needs some help with his iCom HT, specifically a IC-V80 handheld. He is a ham that likes to talk on the PARK repeater. You may have heard Joe on if you listen to the repeater much. He is a really great guy. He likes to get out on the repeater and listen for storm events and talk in general on his HT.

I am looking to borrow a programming cable and software for the IC-V80 . I looked at the V-80 manual and it appears to have a BNC connector for the antenna _and_ I am looking for a possible donation from someone of a 18" long whip for his HT. We may need the whip or not because we haven't seen his HT yet. We want to go over and bring everything needed to get him working the way he used to.

Needed: BNC 18" whip
Programming software and cable

I will make sure that everything gets back to the rightful owners, except for the donation of a whip, if it is needed. Please contact me at KE5TJL@... or michael.f.payne@... if you have any questions or suggestions.

73,

Michael KE5TJL

2403. Jan 2015 PARK monthly meeting change

Yahoo group: laterisersgroup
Date: 2015-01-12 12:59:14 UTC
From: Michael Long
Topic: 2389 Message: 2403

Due to a holiday scheduling conflict, the January monthly meeting for PARK will be held on Tue 20 Jan 2015 instead of Mon 19 Jan 2015.

The location and the time for the meeting (7pm) and for VE testing (6pm) will not change; only the day will change to Tuesday instead of Monday. This change is only for this month.

2404. need Anderson PowerPoles & UHF Bulkhead

Yahoo group: laterisersgroup
Date: 2015-01-20 02:44:35 UTC
From: Anthony
Topic: 2404 Message: 2404

I'm working on an upgrade in my shack and would have finished today if I had a few more Anderson Powerpole sets, and two UHF bulkhead barrels. I can order them from Amazon, whatever, but if someone had some extra they weren't using, I can give you a few bucks and meet up with you Tuesday morning, instead of waiting till Thursday/Friday for delivery from Amazon. I just want to get it done.

Going rates on what I was about to buy was $4 for a 2" UHF bulkhead (F-F threaded all the way through, with two nuts to hold it on the wall of my desk). Just under $1 a pair for a set of 30a Anderson Powerpoles (red/black/2 silver plated contacts).

Text me at 215-632-3283. I'm up in Frisco, near the corner of 121 & Custer. Thanks!

FreeRadioOnMyPhone.org

Contact your wireless carrier today to let them know – as a matter of public safety and consumer fairness for data plans – you want your phone’s FM chip activated for constant access to free FM radio! Go to the FreeRadioOnMyPhone.org website and read what it has to say....

I promptly send a short pre-composed email to my phone carrier and another one to Congress. It was quick and easy. We pay for it in every phone we by, why can't we use it?

Please send this out to everyone you can send it to. Thanks!

Regards,

Michael Payne

Michael has been transferred to a rehab facility to deal with a problem with his leg. He is at HealthSouth on 15th. I don't have the address or a phone number but will post it when I have more information. They expect him to be in rehab for 7 to 10 days. Please keep him in your thoughts and prayers.
KF5FEA, Rusty.

Got this text today from Michael.

Hi. New turn of events. I'm going to go to Methodist Hospital to the Emergency Room because it seems I got an infection in my back and they want me to go today. I'm just waiting on the ambulance ride to get ordered. I don't know if I'll be staying there overnight or back here at the rehab hospital. one (doctors, nurses, etc) are on CYA duty right now. More later.

Actually neither is correct. The special call sign EG90IARU is to celebrate the 90th anniversary of the IARU (International Amateur Radio Union) in Spain. The call sign is used by special event stations operating on the Iberian Peninsula. These stations will also utilize a suffix which ends in /1. /2. /3. Etc to indicate which call district of Spain they are in.

Stations that are actually located in the Canary or Balearic Islands or in Ceuta and Mellila will be using EH90IARU

The info is on QRZ.com although you have to read a little Spanish in order to get the info right.

Okay thanks! I saw the listing in QRZ was in Spanish and just ignored it.
All the spots today are showing Spain, so I guess they figured it out too.
EG90IARU/1 would make a great contest call dontcha think?

2432. Come To An Antenna Party!

Yahoo group: laterisersgroup
Date: 2015-06-08 18:12:13 UTC
From: Michael Payne
Topic: 2432 Message: 2432

Hello, everyone!

I would like to ask if a few of you could help me install my wire antenna to replace another antenna on Saturday, June 20, 2015. I'm not able to get up on my roof or get on a ladder to do anything like that, I wish I could.

B.J. Watkins - KE5UMC, has volunteered to help with the installation, but we need a few others to help him out. We are going to install a longer antenna pole to get the antenna up higher and then run one wire to the tree in the front yard, and the other wire to the back of my fence. We need some one or two on the roof to mount the brackets, pole and then the antenna itself. We will need to have someone get in the tree in the front yard with the help of a ladder to attach the wire to the tree and then mount two 10' fiberglass poles to the top of the fence in the backyard. I thought that we could start about 8:00 AM that Saturday and hopefully it would be over around noon or so.

So, if you can lend a hand on Saturday the 20th of June, I would be most grateful if you could come and help! Please let me know by *email* if you can come or not, *or call me* on my cell phone, at 972-658-4904. My address is 7900 Maiden Lane, Frisco, Texas. And if you have any questions or suggestions, please let me know.

Thank you in advance and hope to see you there!

Michael Payne KE5TJL

2436. RJ-11 connectors, etc.

Yahoo group: laterisersgroup
Date: 2015-07-07 03:36:28 UTC
From: Michael Payne
Topic: 2436 Message: 2436

Hello, everyone!

Does anyone have a few RJ-11 four pin connectors and a crimp tool? Does anyone also have 3' of black telephone cable
that has four wires and is not too large in diameter? I'm trying to make an extender cable for a microphone with modular connections for my base 2m radio,
and I'm wanting to lean back in my shack chair and talk without stretching the mic cable and pulling the cable loose from the connector. If you have any or
all of this and don't mind parting with some of it, please reply to this email.

Thanks and 73,

Michael KE5TJL

From: Woody
Topic: 2440 Message: 2441

I have configured several with chirp.
First need to download from radio.
Then upload changes to radio.
Many of these radios error out/ radio not found due to bad connection.
I have to push the connector side down on my desk to get proper connection.
I hope this helps.

2443. 6m Loop

Yahoo group: laterisersgroup
Date: 2015-07-17 16:38:16 UTC
From: Anthony
Topic: 2443 Message: 2443

I wanted to work in the CQ WW VHF contest this weekend, but my multiband vertical which is supposed to have 6m isn't giving me any low SWR on 6m, and I don't have time to really troubleshoot it, so I'm wondering if anyone has a loop for 6m I could borrow for the weekend.

I'll put it up on a push up mast for the weekend.

Well that's one way to go if your heat/ac isn't in the attic for you to fry with HF.
I still think it's more effective to put up your TV antenna (permitted by federal law)
and guy it with your antenna of choice, maybe a 40m dipole or 40m OCF as an inverted "V".

While I resided in Plano I had an Alpha Delta DX-EE in the attic. Ask Scott, he helped to install it. It barely fit but worked like a champ. There was no radiant barrier but the AC and duct work were up there. There was never any interference with the HVAC system. At the time we were renting a two story home. I’m sure the height of the attic also helped the antenna performance.

I also had a Hustler 5BTV in the backyard. It was mounted against a tree facing toward the house and away from the alley. I ran about eight 32 foot radials with just buried in the grass. I used Krylon Camouflage paint to make the aluminum blend into the tree bark colors. You don’t have to be an artist, just use the paint to break up the straight outline of the vertical. The tree did not seem to have any impact on the antenna performance.

After we moved back to Houston, I had the tree trimmers come out, For a little extra $ they mounted the DX-EE in some tall trees in my yard, about 70 feet up. You cannot see it from the ground.

I replaced the Hustler with a Gap Titan. I mounted it next to a support post for my deck. I have a swivel mount and a pulley arrangement to lower and raise it for maintenance or weather. The Titan gives me access to all the HF frequencies including the WARC bands. It also got the camouflage paint treatment. Still, the lower portion is more visible to the neighbors that back up to my rear fence.

I added a SB-200 linear running about 500 watts last year. So far, no complaints.

Hello Kip,

I used to be a member of PARK. But I've been living in San Diego for the last four years. I've decided not to move back to Plano, so I'm selling my Plano house. I have a 1 KW amplifier in perfect condition (Ameritron AL-80A) that I'd like to sell. The amplifier uses a single 3-500Z tube and has had only a few hours of use. I know you know lots of hams in Plano, so maybe you know someone who is looking for a good deal on an amplifier. I'm asking $800. If you you know of anyone who wants a good deal on a 1 KW amp, please tell them about this. I'll be in Plano from July 25 through July 30, and I'd like to sell the amp while I'm there.

From: andy.knepler@...
Topic: 2452 Message: 2452

Guys,

I'm looking for a good deal on a 30-40' tower. I don't have much to spend, so it's ok if it's not perfect as long as it's good enough to be fixed / repainted / etc. I would be willing to take something down in exchange for the tower or buy / trade for something. If anyone has any leads please shoot me an e-mail at andy.knepler@gmail.com.

Thanks!

2455. Looking for a Wall Wart power supply

Yahoo group: laterisersgroup
Date: 2015-08-23 20:42:37 UTC
From: Michael Payne
Topic: 2455 Message: 2455

Hi, everyone!

I am looking for a wall-wart power supply that supplies 12 volts at 2 amps for a backup hard drive that I have but cannot use because I don't have a power supply for it. I'm asking if anyone might have a wall-wart of this description. The plug end is not the smallest size, but it is the next size up, and that is the only way I know to describe it. It looks to be about 3/16th of an inch in diameter. The center of the plug is positive and the outer part of the plug is negative. I would recognize it if I saw it. I could match it to the drive. The power supply is for a Seagate external disk drive. If anyone thinks they might have one that they would part with, I would be most grateful!

If you have one, please reach me at the following:

Michael Payne KE5TJL

KE5TJL@...

or cell# 972-658-4904

Thanks for your time.

Goodwill on Independence, just north of 15th in Plano has bins of
Wallwarts. One bin is just 12V ones.
Bring your drive and find the right one that fits.

WWW.MTCRADIO.COM

*Are you getting Ready for October 17th?
*

Update!
October 17th is the date. MTC's Ham Radio day is where most hams within

500 miles of Paris Texas will be.
This week after getting back from the Belton Hamfest we have been busy working on the store and warehouse getting ready for the big event.
Our Store will be closed Friday October 16th while we make the final preparations.
So what is this all about?
We are expecting over a thousand people here. Many Will be driving in from as far away as Chicago, North Carolina, New Mexico and even a couple from South America. We do have an Airport Here. At least two flew in last year. It could be lots more.
Reps from Kenwood, Yaesu, MFJ and Ameritron,Texas Bug Catcher and RadioWavz will be here.
We will Liquidate an entire truckload of MFJ, Hy gain and Ameritron products for the guaranteed best deal in the entire country.
Factory Authorized, show only Discounts will be applied , Saturday Only, for most Icom , Kenwood, Yaesu and Alinco radios. We can not post or advertise pricing on the web, sorry. There will be brand new HF rigs here for under $500.
The Shelves will be stocked full of used gear.
Trade ins will be accepted on site.
The store will be Jam Packed with people. We are putting up a 40 foot tent outside where we will have our full Dayton sized hamfest booth set up. This should ease the crowding.
Over 2000 brand new radios will be here and available for sale at the best deal in the nation.
Rohn Tower and Masts will be discounted. Bring a Truck.
No Rain Checks or back orders.
Lots of tailgating (free) in the back on our newly purchase property.

Several Bands will be performing out front all day. Get here early for a special treat. Bring a chair.
Free Food and Drinks will be served all day, while supplies last.
Most Local Hotels are booked and full.
Only a few Tailgate spots are left. If you want one you better call now.

This is the best Ham Radio Event in Texas!

The Grand Prize again this year is a Brand New Kenwood TS-990
<http://r20.rs6.net/tn.jsp?f=001i4jvTjgTqxm7uoLcTmsdWidmj06-EERXNkIJfCqnUzZWKhgAmqk4UjY73ypa1edwxYshcATvAScFgzozhyAtCegIaxS5Ytg0nxmuHBq8ehVKsoVBLtYBID16jS5cWL4uavn4si9_RP4l6jrNzGTBHWcMfI5DUiGWz80EJRlorWSM9hkqtGnuPt4hSfIlRdmL&c=5sUsXPBjV40y0ZkOjbQ_yoxcdioyR98N-31_H6z_dL5angIu_VIWQg==&ch=fSMuEu5SjWvWFh_mKu5-xCKG4qLfODw9MRY-sPI1IXb6mYRHUMGqbQ==>
In addition to that we are also giving away
A Kenwood TS-590SG! (normal Retail Price $1609 or usually much less at MTC if you call us)
TS-590

There will be more prizes too! Lots more!

This event will be like no other that we have ever done.

Fill a Bag! You have heard about that right? We do this every time. We will have at least five huge pallets and maybe a small truck full of mostly new electronics and merchandise, Some pallets will not be opened until the day before. We dont even know what is in them. In the past there has been Ipods, Scanners, Cables, Connectors and just about anything you can think of . Everything you can fit in a bag for $20. If it doesnt fit, that item will be $20. There could be metal detectors, TV's and all sorts of stuff. We also save many of our store returns during the year and throw all of that out there for liquidation. Lots of items were imported as samples and are brand new never used. We will throw all of that in there as well. There will also be a few lucky people. They are going to find some extra special envelopes buried in the bargains. All you can fit in a bag for $20

Bring a Chair, this is very important. The day will go by pretty fast but bring a chair and enjoy some of the best local music you have ever heard. We have a real treat for you this year. Music starts at 9:00 AM. We will have a huge 53 foot stage pulled right up next to the road. Several local bands and even a Full Church Choir will be here..
<http://r20.rs6.net/tn.jsp?f=001i4jvTjgTqxm7uoLcTmsdWidmj06-EERXNkIJfCqnUzZWKhgAmqk4UjY73ypa1edwxYshcATvAScFgzozhyAtCegIaxS5Ytg0nxmuHBq8ehVKsoVBLtYBID16jS5cWL4uavn4si9_RP4l6jrNzGTBHWcMfI5DUiGWz80EJRlorWSM9hkqtGnuPt4hSfIlRdmL&c=5sUsXPBjV40y0ZkOjbQ_yoxcdioyR98N-31_H6z_dL5angIu_VIWQg==&ch=fSMuEu5SjWvWFh_mKu5-xCKG4qLfODw9MRY-sPI1IXb6mYRHUMGqbQ==>

Bring a Truck and save big on Rohn Tower and Telescoping Masts!
Cash is King but we gladly accept Checks and credit cards!

Tailgating- Free
If you dont want to sell your stuff, bring it in. We will take your trade right on the spot to help you get that new rig you have been dreaming about. Dont want to trade? We will buy it.

This is already being talked about from coast to coast. Paris Texas doesn't even realize what is about to happen. They are going to have to get someone out here to direct traffic.

Do not make other plans or if you already have have, cancel them!
You can save thousands of dollars, Have fun, socialize with hundreds of fellow hams, look over the wares from the tailgaters and have a chance to win one of many door prizes.

Bring the family for a morning of fun in Paris
<http://r20.rs6.net/tn.jsp?f=001i4jvTjgTqxm7uoLcTmsdWidmj06-EERXNkIJfCqnUzZWKhgAmqk4Up-IbSdha5dE9HtlJg1p9v4lg_o8eDSokOGOB3rNSMvVBm67O7trszZAQiJbKh6aQvhr4GGkDN3pM2UwpaINZ0DSD6f3qBfmzoXuQYTLrxNxTb3c3pa0NKcu1v7P-hFjBw==&c=5sUsXPBjV40y0ZkOjbQ_yoxcdioyR98N-31_H6z_dL5angIu_VIWQg==&ch=fSMuEu5SjWvWFh_mKu5-xCKG4qLfODw9MRY-sPI1IXb6mYRHUMGqbQ==>!
Plenty of shopping in the Tejas plaza (two blocks north, Behind us)
The shops downtown usually open at 10:00 AM on Saturday
Also to give you and the Family something to do while you are here and waiting for the prize drawings the Trolly De Paris Will be running every 45 minutes or so to downtown Paris . There are lots of shops, restaurants and boutiques to check out downtown. You can even get a

great $7 haircut in the Historic 100 year old Royal Barber Shop. You
Have to check out Swaim Hardware too. While you are here in our town and
on the trolley you can see Paris Texas' very own Eiffel Tower as well as
the Veterans War Memorial as well as other historical places around
town. There will be a guided tour while you are on the *FREE* trolley ride!
troll.jpg
The Trolley will pick up Just to the side of our building and on the
Southwest corner of the downtown Plaza every 45 minutes or so. The
Trolley Driver will have more info
There will be plenty for you to do while in Paris.

Make sure that you are signed up on our email list for the latest info!

2466. MHAB-1 Status Update - All Systems Go [2 Attachments]

Yahoo group: laterisersgroup
Date: 2015-10-09 01:40:02 UTC
From: tony@w5adc.com
Topic: 2466 Message: 2466
Attachments: 2 described; binary payloads are missing from this source WARC

I thought you might be interested in hearing about the latest balloon launch we have on tap. This Saturday will be assist two groups of students with launching a balloon. If you are interested the details are below. If you would just like to follow along, look for W5ADC-11 on aprs.fi or listen in on the repeater in the morning.
The latest flight prediction and weather look great for the launch. We did a quick payload checkout yesterday and the tracker looks good. The Fast Fact and flight predict are attached. This flight will be supporting two student groups, so your help sure would be nice with launch and recovery. The flight time and distance will be modest, so with a reasonable recovery time, we should be finished before noon. The launch scheduled is below:

Scheduled Arrival Time on Site:	7:30 am (McDonald's in Princeton) 8:00 am (At High School)
Scheduled Launch Time:	8:30 am
Launch Site:	Princeton High School, Princeton TX Lat=33.173744 Long=-96.486215
Flight Duration:	Approximately 120 minutes with a maximum altitude of > 90,000 ft
Expected Landing Location:	South of Quinlan, TX

Thanks,
TonyW5ADC

2467. Last Minute Help - Tower Work Tomorrow 10/17

Yahoo group: laterisersgroup
Date: 2015-10-16 14:47:57 UTC
From: andy.knepler@...
Topic: 2467 Message: 2467

Guys,

I know this is very last minute, but the weather looks good for tomorrow and I'd like to try to stack a couple of sections of Rohn 25 and hoist a HF beam at my place in Anna. I need to do some prep work and pick up the gin pole in the morning, so I'm probably going to get started with stacking the sections after lunch. I'll be doing the climbing, but I could use some help on the ground. I already have all the tools / rope / gear / etc. It should only take a couple of hours, if anyone is available to help please e-mail me directly at andy.knepler@... or you can call / text me at (214) 650-8040.

Thanks!

Andy Knepler WA5UP

2468. Fwd: CALL TO ACTION - Senate Bill 1685 - Amateur Radio Parity Act

Yahoo group: laterisersgroup
Date: 2015-11-11 19:55:34 UTC
From: Michael Payne - K5MFP
Topic: 2468 Message: 2468

-------- Forwarded Message --------
Subject: CALL TO ACTION - Senate Bill 1685 - Amateur Radio Parity Act
Date: Wed, 11 Nov 2015 14:28:42 -0500 (EST)
From: ARRL Members Only Web site <memberlist@...>
To: michael.f.payne@...

>From Kay Craigie N3KN, President, ARRL

We are at a critical time for S. 1685, The Amateur Radio Parity Act of 2015, in the United States Senate. There is reason to think this legislation will be considered in the Senate Committee on Commerce, Science, and Transportation as early as next week. That is an extremely important step in the bill's progress towards success.

We have learned that opponents of the legislation have urged their members to contact members of the Senate committee to communicate what can only be called bald-faced lies about the bill's intent and effects.

A number of steps are being taken to counteract those lies. We have to remind the Senators on the committee that amateur radio operators in their states want them to support the bill. I'm asking for your help as Section Manager.

Texas Senator Cruz is on the Commerce committee.

It is quick and easy to do what needs to be done.

Please phone the Senator's office in Washington, DC, at or phone a local office. Or send an e-mail to the Senator using his official web page.

The message is simple: "I'm a constituent and an amateur radio operator. I urge Senator Cruz to support S. 1685, the Amateur Radio Parity Act, when it comes up for a vote in committee on November 18th. Thank you."

The Senator's Washington, DC, phone number is posted at http://www.arrl.org/contacting-your-congressional-representatives.

His own web page showing local office numbers and an e-mail template is at http://www.cruz.senate.gov/.

Whether you phone or e-mail, the key thing is to do it now. As in, today.

ARRL North Texas Section

Section Manager: Nancy Lankford McCain, K5NLM

2478. 2016 PARK Winter Field Day - Simulated Emergency Drill - Jan 30th

Yahoo group: laterisersgroup
Date: 2016-01-29 02:05:53 UTC
From: tony@...
Topic: 2478 Message: 2478

Sorry if this is a repeat for some of you.

This is a Drill and prep for a fun time!
We have been requested to provide communications support for a local city. Due to severely good weather we have been asked to provide the following capabilities:
VHF/UHF FM Voice
VHF Winlink
40 M HF Voice
20 M HF Voice
20 M Digital Communications
And other modes as available
We have been asked to stage at the Lucas Fire Department. Lucas FD is located at 165 Country Club Rd, 75002. This is at the corner of West Lucas Rd and Country Club Road. Staging will begin at 8:00 am. At that time we will inventory our equipment, assign teams and begin setup. We have been requested to begin operations at 11:00 am. The exercise operation will conclude at 5:00 pm and demobilization concluding by 6:00 pm.
If you have the following equipment to loan for the event, please contact me at the email address below.
Inverter based generator, at least 1,000 W
100 ft heavy duty extension cord
40 M dipole antenna with supports
20 M dipole antenna with supports (other options may be considered)
VHF/UHF FM radio with modest external antenna
VHF Winlink system with modest external antenna
HF radio (at least two will be needed)
HF radio configured for digital modes with computer and suitable software
Logging computer
Simple networking equipment (hub, router, cables, etc)
The biggest need is not the equipment listed above, but is the hands and leadership to get all of this running. We will need leaders and support staff for the following positions. If you are interested let me know.
Antenna installation and safety
AC power distribution
Networking and logging
Food and drink (PARK will be providing the funds)
We will be operating from a really nice indoor location. This should be a great time for do a little operating and have some ham radio fun.
Thanks,
Tony

2479. Russ Amlee KE5QAX Update

Yahoo group: laterisersgroup
Date: 2016-03-22 02:13:28 UTC
From: Damon Koch
Topic: 2479 Message: 2479

Hi everyone,
A quick update on Russ Amlee KE5QAX . He hasn't been at breakfast for a few weeks and I found out why tonight. Russ called to say he is going into the hospital Friday to have a pace maker installed. He should be out Saturday and home for a week before coming back to breakfast.
No word on whether or not they'll install a 70cm repeater while they are in there.

Please keep Russ in your thoughts and prayers this week.

73,
Damon K5OCH

2482. Anderson Powerpoles 15 AMP

Yahoo group: laterisersgroup
Date: 2016-04-06 00:12:26 UTC
From: Sean Monohan
Topic: 2482 Message: 2482

Anyone have any 15 AMP Anderson Powerpoles for 18g wire? I am trying to setup a QRP 12V/7AMH battery for my LD5 QRP transceiver. So trying to use Anderson powerpoles to connect to transceiver.
Only place I can find powerpoles locally is HRO and they close too early for me to get over there during the week and tax season won't let me get over there on the weekends for a few weeks maybe longer.
I have some on order, but delivery seems to be 2 weeks from today. Wanted to see if anyone had some to bring to this Saturday's breakfast and I can give a few bucks, pay for breakfast, etc to cover.

Subject: [laterisersgroup] Anderson Powerpoles 15 AMP

Anyone have any 15 AMP Anderson Powerpoles for 18g wire? I am trying to setup a QRP 12V/7AMH battery for my LD5 QRP transceiver. So trying to use Anderson powerpoles to connect to transceiver.

Only place I can find powerpoles locally is HRO and they close too early for me to get over there during the week and tax season won't let me get over there on the weekends for a few weeks maybe longer.

I have some on order, but delivery seems to be 2 weeks from today. Wanted to see if anyone had some to bring to this Saturday's breakfast and I can give a few bucks, pay for breakfast, etc to cover.

Save This Date: HAM RADIO CLASS
The Plano Amateur Radio Club will be presenting a Technician level amateur radio class on June 18th-19th, 2016. The class will be held at the Lucas Fire Station, which is located at 165 Country Club Ln, (just north of Bethany/Lucas Rd.) in Lucas. As always the class is free, the EXAM is $14.00 cash. We are looking at a timeframe of 8:00am- 3:00pm on Saturday and 9:00am- 2:00pm on Sunday, with the EXAM at 3:00 on Sunday. Parking should be available on the south side of the fire station. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).

Other amateur radio class exams (General,Extra) will also be available for those wishing to take those exams. You need to bring a copy of your current amateur radio license.

To prepare for this class, we urge you to pick up a copy of the Ham Radio School's Technician Class study guide prior to the class, and read through the course material at least once. We have a number of used study guides available, which you can rent for $14.00 cash. When you return these study guides, in good condition (not marked up or dog ear'ed), your $14.00 rental fee will be applied to the $14.00 cost to take the examination. Basically, we save you the cost of buying the study guide.

Any additional questions that you might still have after reading through the study guide, will be covered during the two day training class. If you want your own copy of the study guide, these manuals are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95.

To register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@arrl.net). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Let us know if you are interested in renting one of our used study guides, and we will contact you regarding how to pick up your copy.

Thanks
Mike Pruden

2488. Museum Ships Weekend

Yahoo group: laterisersgroup
Date: 2016-06-02 22:16:01 UTC
From: Stan Starks
Topic: 367 Message: 2488

For those folks on HF, this weekend is Museum Ships Weekend when over 100 museum ships all over the world, but mostly in North America will be on the air at least part of the weekend. The event officially runs from 7pm CDT Friday evening until 7 pm CDT Sunday evening. Most of these ships have very nice QSL cards you can send for along with a lot of interesting history.

Check out all the details here: http://www.nj2bb.org/museum/

Good luck and have fun!

Save This Date: HAM RADIO CLASS
The Plano Amateur Radio Club will be presenting a Technician level amateur radio class on December 3rd-4th, 2016. The class will be held at the Allen Central Fire Station training center, which is located at 310 Century Parkway, in Allen TX.. As always the class is free, the EXAM is $14.00 cash. We are looking at a timeframe of 8:00am- 3:00pm on Saturday and 9:00am- 2:00pm on Sunday, with the EXAM starting at 3:00 on Sunday. Limited parking should be available on the north side of the fire station. Additional parking is available across the street (Century Parkway), at the City of Allen municipal complex. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).
Other amateur radio class exams (General,Extra) will also be available for those wishing to take those exams. You need to bring a copy of your current amateur radio license.

To prepare for this class, we urge you to pick up a copy of the Ham Radio School's Technician Class study guide prior to the class, and read through the course material at least once. You should not expect to just walk in to the two day training class and grasp all the necessary information to successfully pass the exam. But, if you prepare by reading through the study guide, and marking any items that you have questions about, and then pay attention and ask questions during the two day training class, there is an excellent probability that you will pass the exam with a high score.

These study guides are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95. We also have a number of used study guides available, which we can loan you for a $14.00 cash security deposit. When you return these used study guides, in good condition (not marked up or dog ear'ed), your $14.00 security deposit will be applied to the $14.00 cost to take the examination. Basically, we save you the cost of buying the study guide.

General Class Radio License Course and Exam

The Plano Amateur Radio Club is in the planning stages of scheduling a General Class License radio class and exam for sometime in the February - March time frame. We are trying to get a feel for how much interest there would be in this type of class. We envision this class occurring over two consecutive weekends (Saturday and Sunday) in the month of either February or March. The class would be free, but the exam would cost $14.00. If you would be interested in participating in this type of class, please send an email to NN5ZZ@arrl.net mailto:NN5ZZ@arrl.net and please include your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER, and we will contact you, as the details are firmed up.

Thanks for Interest

2492. Unusual Canadian Prefixes this year

Yahoo group: laterisersgroup
Date: 2017-01-02 02:41:28 UTC
From: Stan Starks
Topic: 2492 Message: 2492

For those of you who operate HF, don't be thrown by the unusual prefixes being used by some of our neighbors to the north this year.
They are celebrating Canada's 150th anniversary. Here's the info from the ARRL website:

Special Call Sign Prefixes Available to Celebrate Canada's Sesquicentennial

> /12/29/2016/
>
> Radio Amateurs of Canada (*RAC* <http://www.rac.ca/>) has secured
> permission for all Canadian radio amateurs to use special call sign
> prefixes to celebrate the *150th anniversary*
> <http://canada.pch.gc.ca/eng/1468262573081> of Canada's Confederation
> during 2017.
>
> Starting on January 1, radio amateurs and clubs with VA-prefix call
> signs may use CF instead, and those with VE-prefix call signs may use
> CG instead. Amateurs and clubs with VO-prefix call signs may
> substitute CH instead, while those holding VY-prefix call signs may
> substitute CI. Use of the special prefixes is optional, and Canadian
> radio amateurs may choose if and when to use the special prefix at any
> time during the year.
>
> VY1AAA, the Yukon Canam Contest Club, will mark the sesquicentennial
> with special call sign XK150YUKON from January 1 until March 1. The
> rest of 2017, VY1AAA will operate using either CI1AAA or VY1AAA.

Spending a little time on 20m today, the new prefixes are already actively being used, so it will be a good year for prefix chasers. I worked XK150YUKON this afternoon and I think they are going to get tired of that call pretty quickly. Try saying it phonetically a few dozen times in a row and I think you will understand, but they do have a nice QSL card.

73,
Stan NW5Q

Save This Date: General License Ham Radio Class

The Plano Amateur Radio Club will be presenting a General level amateur radio class on two consecutive weekends in February. The class will be on Saturday and Sunday: February 11th-12th and February 18th-19th. The class will be held at the Lucas Fire Station training facility. The fire station is located at 165 Country Club Ln, which is just north of Bethany/Lucas Rd, in Lucas. Lucas is located just east of Allen, TX off of US Hwy 75 at the Bethany Rd. Exit. As always the class is free, the test is $14.00 cash. We are looking at a timeframe of 8:00am- 5:00pm on each date, with the EXAM starting at 3:00 on Sunday February the 19th. Parking should be available on the south side of the fire station. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).

To prepare for this class, we urge you to pick up a copy of one of the general class study guides, and read through the material at least once prior to the class. You should not expect to just walk in to the four day training class and grasp all the necessary information to successfully pass the exam. But, if you prepare by reading through the study guide at least once, and marking any items that you have questions about, and then pay attention and ask questions during the four day training class, there is an excellent probability that you will pass the exam with a high score.

Our course material is based on the "Ham Radio School's General Class Study Guide." These study guides are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95. There are also a number of online practice exams that can help you identify those areas where you need a little extra practice.

To register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@arrl.net). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Thanks

From: Michael Payne - K5MFP <michael.f.payne@...>
To: Richard Clark AE5GF <ae5gf@...>

Richard and to everyone else,

This tube came off of the WWII Enterprise aircraft carrier. It is a tetrode screen grid RF power amplifier tube. The maximum out put is 400 RF watts. This type of tube was made by General Electric, although it was also produced by RCA.

USS /Enterprise/ (CV-6), was the seventh U.S. Navy vessel to bear the name <https://en.wikipedia.org/wiki/List_of_ships_of_the_United_States_Navy_named_Enterprise>. Colloquially called *"the Big E"*, she was the sixth aircraft carrier <https://en.wikipedia.org/wiki/Aircraft_carrier> of the United States Navy <https://en.wikipedia.org/wiki/United_States_Navy>. A /Yorktown/-class <https://en.wikipedia.org/wiki/Yorktown-class_aircraft_carrier> carrier, she was launched in 1936 and was one of only three American carriers commissioned before World War II <https://en.wikipedia.org/wiki/World_War_II> to survive the war (the others being /Saratoga/ <https://en.wikipedia.org/wiki/USS_Saratoga_%28CV-3%29> and /Ranger/ <https://en.wikipedia.org/wiki/USS_Ranger_%28CV-4%29>). She participated in more major actions of the war against Japan than any other United States ship. These actions included the Battle of Midway <https://en.wikipedia.org/wiki/Battle_of_Midway>, the Battle of the Eastern Solomons <https://en.wikipedia.org/wiki/Battle_of_the_Eastern_Solomons>, the Battle of the Santa Cruz Islands <https://en.wikipedia.org/wiki/Battle_of_the_Santa_Cruz_Islands>, various other air-sea engagements during the Guadalcanal Campaign <https://en.wikipedia.org/wiki/Guadalcanal_Campaign>, the Battle of the Philippine Sea <https://en.wikipedia.org/wiki/Battle_of_the_Philippine_Sea>, and the Battle of Leyte Gulf <https://en.wikipedia.org/wiki/Battle_of_Leyte_Gulf>. On three occasions during the Pacific War, the Japanese announced that she had been sunk in

battle, a fact that gave her the name "The Grey Ghost". /Enterprise/ earned 20 battle stars <https://en.wikipedia.org/wiki/Service_star#Navy_warships>, the most for any U.S. warship in World War II, and became the most decorated U.S. ship of World War II <https://en.wikipedia.org/wiki/Most_decorated_US_ships_of_World_War_II>.

The USS Enterprise (CV-6) was launched October 3, 1936, and was decommissioned on February 17, 1947. A big THANK YOU to everyone who has served in the military. Many lives were lost over the years and they will not be forgotten.

Please talk to younger people at every opportunity about the sacrifices made by the men and women that has served in our military, so that no one will ever forget.

Michael K5MFP

2497. Kenwood TH-78A HT

Yahoo group: laterisersgroup
Date: 2017-01-19 19:22:18 UTC
From: Michael Payne - K5MFP
Topic: 2497 Message: 2497

Hello,

I have a Kenwood HT, model TH-78A, 2m - 70cm, and the radio has quietly died. It just quit working.

Anyone is welcome to this radio if they want it, at no cost. It comes with the charger, SM-33 hand/speaker mic, a Kenwood PB-13 battery, an emergency battery that uses 6 AA batteries, and the rubber duck antenna that came with it. Someone could repair it or use it for parts.

First one to ask for it gets it.

Please reply to my email directly. Thank you.

73,

Michael K5MFP

P.S. I will be offering up other items as I can get to them, at no charge, of course. Will send out other emails over the next couple of weeks.

Hello to all!

If there is a new ham or a not-so-new ham who is in dire need of a 6-way coax switch and can't afford one? Another ham has given me some equipment that I am trying to find a home for. The price is nice..... free! This is a not new, but still serviceable. I have attached a photo of the coax switch. It has been in storage for several years but should be in working order. Send me an email about it if you are interested.

From: Michael Payne - K5MFP
Topic: 2500 Message: 2500

Good afternoon everyone!

I am looking for someone who has a MFJ-282K behind the neck, Neckset Boom Microphone. It wears on the neck and lets you put on a ball cap, helmet, etc. and still communicate with your HT. The MFJ-282K model fits Kenwood, Wouxun, and Baofeng type HT's.

If you have one that you wouldn't mind parting with, please drop me a email to my address shown above. Tell me what your asking price is.

Thanks and 73,

Michael K5MFP

2501. Saturday Breakfast at Poor Richard's Location Change

From: Damon Koch
Topic: 2501 Message: 2501

I think I just sent at least one empty email. There was a loose nut on the keyboard.
The group that meets at Poor Richard's in Plano for breakfast every Saturday will not be meeting at Poor Richard's this week.
We will instead meet at Denny's at 1830 North Central Expressway in Plano. This is the SE corner of 75 and E. Central Parkway, on the East side of 75 between 18th street and Park.
Someone will probably be there well before 6AM and we will try to keep close to the 7am ordering schedule. If you know of anyone not on the club email list that goes to Saturday breakfast at Poor Richard's, please do me a favor and forward the location change to them.

2503. Announcement!!!

Date: 2017-06-13 04:09:15 UTC
From: Michael Payne - K5MFP
Topic: 2503 Message: 2503

Hello, everyone!

Several of us have been talking and kicking around an idea that we hope everyone might like.

We all know that the Good News Net is not operating for the time being, so we thought that it might be nice to have a unstructured, no format net every Thursday night at 8:00 p.m. There won't be any check-in's as such and there will be no program to listen to.

What we will do is open up The Net and if someone wants to suggest a topic, then we'll go with that. If, after a while, it takes off in a different tangent, then there it goes! If someone needs an answer to a ham problem, then anyone can try to answer the question and be of help.

We want to make this a place where anyone can get on, talk and have fun. There even could be some ARES information to come along at some point in time. Maybe other topics, too!

We just want to have a little fun and maybe some rag-chewing, too. This is a perfect place for people new or not-so-new to the hobby to get on and operate and talk.

Tell everyone about this and send in any suggestions, if you have them. So feel free to join in at any time and hope to see you there!

73,

Michael K5MFP

2504. Tomorrow Night - Thursday, June 15th

Yahoo group: laterisersgroup

From: Michael Payne
Topic: 2504 Message: 2504

Hello to all!

Be sure to join us on the PARK repeater tomorrow night at 8:00 p.m. for The Net. We are going to talk about anything that is one people's mind and just talk in general. No telling what might come up!

Hope to hear you at 8:00!!

2505. Free Cable

Topic: 2505 Message: 2505

Hello!

Looking forward to Field Day tomorrow!

I upgraded my cellphone recently. My older Samsung has a Micro connector in the base of it. I have a Micro to HDMI cable that I don't need anymore. It will let Samsung Galaxy (and anything else?) that uses the Micro connector to connect to your TV and let you view your contents on the screen from your phone. Handy if you watch YouTube or movies on your phone and want to put the contents up on the screen. It is called a PWR+ cable. It has a Micro to HDMI cable and a USB to the same HDMI connection. The USB is there for power. It works great! I can't use it anymore. so I'll give it to the first person that would like to have it. I'll be a Field Day Saturday and Sunday most of the time, so I'll bring it then.

73,

Michael K5MFP

Hello to all,

I just thought I would drop everyone a note and remind you of the PARK Informal Net that's on every Thursday at 8:00 p.m. on the PARK repeater. It promises to be a good time and informative. Please join us tomorrow night!

73,

Michael K5MFP

If anyone has an announcement that they would like to be put on the Net tomorrow night, please send them to me or just announce it on the air.

Thanks and 73,

Michael

Can you please make this announcement? Or at least some thing like this.

Collin Classic July 21st Communications Support

The Collin Classic is now sponsored by and supports the Boys and Girls Clubs of Collin County. In Collin County since 1968, the Boys and Girls Clubs of Collin County enable all young people, especially those who need us most, to reach their full potential as productive, caring, responsible citizens. They are located in McKinney, Plano and Frisco. This year the Collin Classic is starting from, Oak Point Park in Plano. Many of you will know this as the balloon launch field. The route will generally follow the old Wild Ride route. The new date will allow us to provide excellent support. In additional to general rest stop and shadow support, we have also been asked to help with SAG if possible. Most positions have a start time of 8:00 am. A link to the event web site is below. Please contact me as soon as possible if you can help.

http://www.bgccc.org/events/collin-classic-bike-rally/

Thanks,

Tony

2510. Technician License Class

Yahoo group: laterisersgroup
Date: 2017-07-14 22:45:44 UTC
From: mbpruden@...
Topic: 2510 Message: 2510

Save This Date: HAM RADIO CLASS

The Plano Amateur Radio Club will be presenting a Technician level amateur radio class on August 12th and 13th,2017. The class will be held at the Lucas Fire Station training facility. The fire station is located at 165 Country Club Ln, which is just north of Bethany/Lucas Rd, in Lucas. Lucas is located just east of Allen, TX off of US Hwy 75 at the Bethany Rd. Exit.

As always the class is free, the EXAM is $14.00 cash. We are looking at a timeframe of 8:00am- 5:00pm on Saturday and 9:00am- 2:00pm on Sunday, with the EXAM starting at 3:00 on Sunday. Parking should be available on the south side of the fire station. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).

Other amateur radio class exams (General,Extra) will also be available for those wishing to take those exams. You need to bring a copy of your current amateur radio license.

To prepare for this class, we urge you to pick up a copy of the Ham Radio School's Technician Class study guide prior to the class, and read through the course material at least once. You should not expect to just walk in to the two day training class and grasp all the necessary information to successfully pass the exam. But, if you prepare by reading through the study guide, and marking any items that you have questions about, and then pay attention and ask questions during the two day training class, there is an excellent probability that you will pass the exam with a high score.

These study guides are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95.

We also have a number of used study guides available, which we can loan you for $14.00 cash security deposit. When you return these used study guides, in good condition (not marked up or dog ear'ed), your $14.00 security deposit will be applied to the $14.00 cost to take the examination. Basically, we save you the cost of buying the study guide.

To register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@ARRL.NET). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Let us know if you are interested in one of our used study guides, and we will contact you regarding how to pick up your copy.

Thanks
Mike Pruden

From: Kipton Moravec
Topic: 2511 Message: 2511

The Plano Amateur Radio Klub will be installing new repeater hardware on Saturday July 15. Both the VHF WD5ERD and K5PRK UHF repeaters will go down sometime after 9:00 a.m. and should be up and running before 3:00 p.m.

Thank you for your understanding.

Kipton Moravec AE5IB

PARK Communications Director

2512. Re: [K5PRK_rptr_move] WD5ERD and K5PRK Repeaters down on Saturday from around 9:00 to maybe 3:00 p.m.

Everything with the new repeaters are installed and most everything is working.

We are aware that the messages and tones from the repeater controller seem to be much louder than the voices from people talking. We did not notice it when we were testing, but it was very noticeable when we went live. To fix it involves taking a oscilloscope to the controller and adjusting some pots inside the repeater controller. We were not expecting that problem, and did not have the equipment to fix it with us. We will make a return trip within a week to fix it.

In addition we have been hearing a flash flood warning message come on after the controller reboots. We are looking for that problem. And the courtesy tone is working fine on the VHF repeater and not working on the UHF repeater. They were both working earlier. Fortunately those issues can be fixed remotely (from home) once we figure out what is wrong.

More details will be presented at the PARK meeting on Monday. Be there.

Kip

2513. Repeater Status 7/19/2017

Yahoo group: laterisersgroup
Date: 2017-07-20 03:03:32 UTC
From: Kipton Moravec
Topic: 2513 Message: 2513

Tony and I went to the repeater to fix some of the items.

The courtesy tones were reduced and seem to be at about the right level now.

The announcements were reduced as far as they can go. They are much better, but they are still too loud. That means when I go back I need to increase the volume of the UHF and VHF repeaters so they are a little higher than the announcements. It is better than it was.

There are two PL tones. The first you use with your transmit and the when the repeater hears the tone, it repeats the signal. The second PL tone the repeater transmits and if you have tone squelch set your radio's squelch will open and you can hear our repeater but not the Bosque County repeater. If you do not have it set you hear both.

The first tone always worked. However the second did not. The program to set the PL tone said both were programmed but they were not. However there was a second place in the program that you could put the second PL tone. We tried it there and it started working. So both VHF and UHF had it turned on.

Then we started hearing static when people would unkey on the VHF repeater. Watching the LEDs it became apparent that the PL that was being transmitted was coming in on the receive, and turning on and off rapidly. This was the same problem we had with the old repeater, and we thought it was the tone board. Having it happen on both repeaters is too much of a coincidence. It has to be something wrong outside the radios.

There are two possibilities. First, something could have happened to the antenna, diplexers, or feed line to increase the SNR to send more reflected signal back. Our quick look with a meter did not seem to indicate there was a big SNR problem, but there were a couple of small bumps where we did not expect it.

Or second, the Duplexers (or cans) that filter between the VHF transmit and receive have come out of adjustment. There is 600 kHz between transmit and receive on a VHF repeater. Two of the duplexers let 147.18 MHz pass and try to block 147.78 MHz and the other two let let 147.78 MHz pass and try to block 147.18 MHz. The ones that let 147.18 pass goes to the transmitter, and the ones that let 147.78 pass goes to the receiver. That is what keeps the 130W transmitted from saturating the sensitive receiver.

It appears the isolation may not be as good as we need, so maybe we need to adjust the filters. Until we do, the tone squelch on your radios need to be turned off. Fortunately this time of the year ducting is not very common, so we should not hear Bosque county very much.

It will be a couple of weeks before we get back to try to fix this issue.

Last night the courtesy tone was working on the UHF repeater. Tonight it was not. Still looking for that bug.

Kip AE5IB
PARK Communications Director

2514. Repeater Status July 29, 2017

Yahoo group: laterisersgroup
Date: 2017-07-29 22:47:29 UTC
From: Kipton Moravec
Topic: 2514 Message: 2514

We have been having problems on the VHF repeater with the Transmit PL tone. The transmit PL tone is 107.2 Hz which is the same as the receive PL tone.

If you have a radio you must transmit a 107.2 PL tone for the repeater to recognize you. So the repeater looks for it on the receiver.

If you turn on the receive squelch your radio then your radio recognizes the PL tone transmitted by the K5PRK repeater. The repeater in Bosque county has the same frequency as our repeater, and the PL tone lets your radio hear our repeater and ignore the other repeater.

We have turned off the repeater's transmit PL tone because it was feeding back into the receiver and causing static at the end of a transmission for a few seconds.

This happened on the old repeater and we believed it was an issue with the 40+ year old HW. We were very surprised when it happened with the new repeater. That gave us a clue that it may have been something outside the repeater. The goal for today was to figure out what was failing, and causing the feedback.

Something was causing the signal to go out the transmitter and come back in the receiver. My guess that either the cavity filters needed retuning, or something was causing a large SWR which reflected a lot of energy back from the antenna.

Last weekend Tony and I practiced tuning the Cavity filters I got from Azel to make sure we knew what we were doing. So we got some help from Damon and went to the repeater site and took the cavity filters off the shelf, about 10 feet in the air, and brought them down to the ground where we could work on them.

After scanning them they looked pretty good. The pass was about 1.3 db down (lower is better) and the reject was about 80 db (higher is better). It was not exactly lined up on the reject so after adjusting the reject stubs for 5 minutes we were able to add 3 or 4 db of rejection. Helpful but not much of an improvement. They were already in good shape. So it was not the Cavity filters.

Next was the Timewave VHF/UHF duplexer. This splits and filters the antenna coax into two coaxes, one for VHF and one for UHF and attenuates about 28 db of the wrong signal. We scanned it with the same analyzer we used for the cavity filters and it seemed to meet the specifications.

Finally we did a SWR of the antenna to see if anything in the antenna or coax was causing a high SWR at the VHF or UHF PARK frequencies. It was

1.5 or better.

So we could not find anything wrong with anything.

We started to suspect the cavity filters were not rejecting enough of the signals. And if we lowered the output power we could maybe find out how far we were off. Fortunately Tony had a 10 db attenuator with him. So whatever signal you put in you get 10 db less out. When we put that between the transmitter and the amplifier we did not get the feedback any more. So we now had a bound on the problem. If we dropped the power between 0 db and 10 db the system would work O.K. without feedback.

We found out how to adjust the power on the VHF transmitter. We found that at the transmitter 4W out it did not occur and at 20W it did. We kept lowering the power until we got to about 6W where the feedback issue was intermittent.

At that point we started thinking, lets take out the amplifier and see what happens with just the transmitter. The default High was 28W and it was happening there. At 4 Watts it did not happen. And at 10W it did not happen. The old repeater was putting out close to 20W and the feedback was happening there. So somewhere between 10 and 20W out the feedback was occurring.

That still did not tell us why.

As we were staring at it, (it is not very complicated setup,) Tony decided to try to remove the VHF/UHF diplexer, and hook VHF only to the antenna. Everybody thought it would not make any difference because it tested O.K. but we had no other ideas. When we transmitted at full 130W of power there was no feedback. It was working right.

But why?

So then we started thinking there may be an interaction with the UHF system. But it used to work.

I was on the phone to Fred trying to get some ideas, and Damon, Tony, and Bob were discussing it on their own, when it appears we all came up with the same idea. Unhook the UHF cable from the VHF/UHF diplexer and replace it with a dummy load.

With the diplexer and the UHF dummy load we still had the feedback problem. Without the diplexer no feedback problem. Looks like the diplexer is the problem.

We have 3 choices until it is fixed:

1. Turn off the repeater PL transmit and continue operating like we have been for the past 6-7 months.

2. Turn on the repeater PL transmit and lower the VHF output to 10 watts or so, so we do not get the feedback.

3. Turn on the repeater PL transmit and operate at full power without the diplexer and take the UHF repeater off the air until the new diplexer arrives.

It was a team decision, but we went for option 3, and took the UHF off the air for the time being. Nobody is using it much, and VHF is used a lot more. And we want people to use the PL squelch function on their radio.

So I will call Timewave on Monday and get their take on all of this. Then I will decide what to do next. Get another diplexer, same model, different model, or different brand.

Bottom line. VHF is operating full power, with the transmit PL tone. UHF is temporarily off the air.

From: Kipton Moravec
Topic: 2514 Message: 2516

Things are not always as they seem.

I was working in my office, with the repeater on in the background. A couple of people were on the repeater chatting, and I noticed the feedback problem was back. In addition one or two people that normally have clear transmissions on the repeater were very noisy. So the receive sensitivity of the repeater was worse also.

They talked on the repeater and the feedback deemed to get worse and worse. It sounds like static at the end of the transmission after the user released the PTT switch. The worse it is the longer it lasts.

When they finished talking after being on about 30 minutes, instead of lasting 1-4 seconds, it just kept going. After it was not turning off, I was able to log into the Raspberry Pi at the repeater site, look up the command to disable the repeater, get the terminal program that talks to the repeater going, and shut down the repeater.

After a few minutes I enabled the repeater and the feedback was still there. I shut down again. Waited a little longer and it was still happening.

So Tony and I went back to the repeater site at 4:30 today. When I enabled the repeater after being off for about 45 minutes it was acting normal.

We checked the SWR of the antenna and it was good. I was worried something else like the diplexer on the top of the water tower went bad now.

The more I used it the worse it got. It did not happen with the repeater below 10W.

I do not think we know what is going on yet.

The Telewave TS-1545H is rated at 150W (https://www.tessco.com/products/displayProductInfo.do?sku=440918) We were running 130W. The sun was hot.
I am wondering if there is a de-rating in the power specs based on the temperature.

Comet has a model CF-1460I OR CF 1416B that is rated for 800W PEP for VHF and 500W for UHF. I am thinking the extra power margin might be worth it. The bad part is that it is an indoor unit. The one on the top of the water tower needs to be for outdoors. I think it is cheaper than the Telewave, but the Telewave is weather proof.

So I will call Telewave tomorrow and try to talk to an engineer.

In the meantime the repeater transmit PL tone has been turned off, and
we are outputting 40W for now. The receive is sounding good now.

2517. Repeater Status July 30, 2017 -- Addendum Shut Down

Yahoo group: laterisersgroup
Date: 2017-07-31 02:03:28 UTC
From: Kipton Moravec
Topic: 2514 Message: 2517

The hits just keep on coming.

Got a note from a well respected and competent engineer:

"FYI, for the last few days, when the PARK repeater (147.180) is keyed up, it is spurious about +/-23MHz on:

124.135Mhz

170.200
170.2125
170.225
170.2375
170.250
170.2625"

We have to shut the VHF repeater down until we find it. We cannot be broadcasting outside our band.

Do not know if it is relater to other problems or not yet.

2518. K5PRK VHF Repeater down for maintenance Saturday Morning 8/12/2017

Yahoo group: laterisersgroup
Date: 2017-08-12 00:39:25 UTC
From: Kipton Moravec
Topic: 2518 Message: 2518

We have been testing the VHF Repeater this week to see if anything unexpected will happen. Fortunately all seems to be working well at the current 28W. And the Tone Squelch signal is working without feedback.

The VHF Amplifier has been repaired, and is being shipped back. I expect it around Tuesday or Wednesday.

I picked up a new Comet GP-95 at HRO and we will schedule a climb to replace the bad one on the top of the water tower in the next week or so, depending on what else we find we need, what we can get, and how fast we can get it.

Part of the problem we are seeing is noise from the other transmitters on the water tower. They have added a lot of transmitters on a lot of bands at the water tower over the past 10 years. We will be working to determine what we need to do to mitigate the interference. It may mean additional filtering and the filters are not cheap. The analysis we are doing helps us figure out what is going on.

Last Saturday we analyzed the VHF antennas, and tomorrow we will work on UHF. We will start earlier, at 8:00 a.m. and hope to finish in fewer hours than last week. Expect the Repeater to be up and down all morning.

If everything works as expected, we should have the UHF repeater also in operation when we finish.

Kip AE5IB

PARK Communications Director.

2519. A fun night of conversation!

** The K5PRK Information Net

August 17, 2017, 8 p.m. – 9 p.m.

Science Fair Project – Linking 3
Continents , using EchoLink and the K5PRK Repeater

Edward Seeto, VK3LIP, at the Science Fair - Township of
Sassafras, State of Victoria, Australia

Charlie Chrissey- KG5NAN - City of Fuchal, on Madeira
Island, Portugal

Michael Payne – K5MFP – City of Frisco, Texas , USA

On Friday, August 18, 2017, Edward Seeto will be at the
Science Fair at the Sherbrooke Community School, in Sassafras,
Australia. He was asked to demonstrate Communications using
the Internet and Amateur Radio to students, parents, and teachers.

Prior to August 11th, Edward contacted me using EchoLink
and connected to the K5PRK repeater, initially asking me to talk to the
students at the Science Fair during school
hours in Australia.

His request would be during our 8 p.m. to 9 p.m. K5PRK
Information Net on August 17th. I said “why don’t we incorporate the
Science Fair and the K5PRK Information Net”, being that
both would fall exactly during the same hours. He agreed.

After talking to Charlie Chrissey, KG5NAN, he let me know
that he would be in Portugal during that period. He decided that he
would join the conversation at that time, also using
EchoLink.Patrick Chrissey, KG5THS, will be using NetLogger software to
log in everyone locally to the net, and I would moderate the
net. Edward would be asking if students (and others) would like to talk
to ham operators in the U.S. and Portugal. We will be asked
questions and we can ask questions in return.

The Victorian State Minister of Education will be stopping
by the science fair, and will probably want to talk to us.

We ask that you login to the net with your callsign and
your first name.

Please have a listen andjoin in the fun!

To all,

I wanted to let everyone know that I made some changes to the email I sent out yesterday about the K5PRK Information Net this Thursday night at 8:00 p.m. The corrections were related to geography, but everything is the same information. You will find the corrected document attached. I hope you listen in or join in!

2522. Little Buggy Kids Triathlon

Yahoo group: laterisersgroup
Date: 2017-08-31 02:19:40 UTC
From: Kipton Moravec
Topic: 2522 Message: 2522
Attachments: 2 described; binary payloads are missing from this source WARC

The Blacklands Triathlon we normally do every was canceled this year because Oak Point Park Natatorium is under construction. However the kids part of the race is going to happen. It is some kind of regional event that qualifies them for a higher level event. So it must go on!

They have 250 kids signed up!

Because this is a smaller course we do not need the number of operators as we normally have. They are asking for at least 8 people. 3 Shadows and 5 on the bike course because of the neighborhood. I would also like a couple more.

Also this will end earlier. If you are a shadow you need to arrive at 6:15 a.m. the shadows have to get with their person at 6:30. If you are on the course you need to be there by 6:45 a.m.

The race starts at 7:30 a.m. and the kids will be on the bike course by 7:33 a.m. They Swim, Bike, then Run. It should be complete by for the guys on the bike course by 9:00 a.m. The shadows will probably finish by 9:15. a.m.

This race is at the Williams Natatorium at Williams High School, 1712 P Ave, Plano, TX 75074. This is between 17th St, and 18th St. Google or look at the maps in the link below.

To sign up I need:
Name
Callsign
Email
Cell Phone number
T-Shirt size

Right now I am working on where we park. If we park at the High School we may have to be in by the time the streets close. I do not know what time the street will close yet. I will have assignments as soon as I know who is participating.

So let me know if you can help out. Email me at kiptonm@...
<mailto:kiptonm@...>

This link has the race info in it. It is about 17 MB too big to email. Has all of the info you may need.

K5PRK Information Net
Thursday, September 7, 2017
8:00 p.m. - 9:00 p.m.

Good evening, everyone. The subject of the K5PRK information Net that will take place on September 7th will be about _DMR_, or digital mobile radio.

The guest speaker will be our own Larry Moyer - K5IMO. Larry will tell us a little about the different networks, hardware and other information related to DMR, and will take questions from listeners.

Please join us this coming Thursday night at 8 o'clock on the PARK VHF repeater at 147.180 + PL of 107.2.

It should be a great night for listening and participation!

Please join us!

2524. K5PRK Information Net

K5PRK Information Net

Hello to all PARK members!

The purpose of this email is to inform everyone in the PARK community about the K5PRK Information Net held every Thursday evening at 8:00 p.m. on the K5PRK VHF repeater, 147.180, PL tone 107.2

The purpose of this Information Net is for the free exchange of information relating to Ham Radio technology, activities, experiences and events.

The Net is usually 1 hour long, but on occasion we might run over for a brief time, unless there is an ARES training program scheduled or for weather related nets, etc.

We would like to put out a standing invitation for suggestions and topics from everyone to be considered for discussion on the Net. We would also like information on upcoming events so that we can announce them over the Net in a timely manner.

Please send an e-mail to k5mfp@... <mailto:k5mfp@...>or to ccrissey@... <mailto:ccrissey@...>with your suggestions and topics. We are eager to hear from you!

2525. Repeater Status September 7, 2017

Yahoo group: laterisersgroup
Date: 2017-09-08 00:56:22 UTC
From: Kipton Moravec
Topic: 2525 Message: 2525

Tony finished building the isolator,and mounted it on a rack shelf. It was designed for 150 MHz but he was able to tune it down to 147.18 MHz the K5PRK repeater output frequency. The isolator is a dual circulator type.

Here is how it works and what it does.

Energy from the transmitter is passed through the 2 circulators, and then through a band pass filter before going to the cavity filters and out to the antenna. Energy from the antenna, goes through the cavity filters where it is split between the receiver and the transmitter, (so for this we will follow the transmit path) then it goes through the bandpass filter, then it hits the first circulator. Most of the energy is dumped to a 100 W dummy load, but a signal about 35 db down is passed to the second circulator. Most of that energy is dumped to a 2W dummy load, but a signal another 35 db lower gets through to the amplifier. So the transmitter sees about 70 db less than what is reflected.

For example lets look at the worst case, and assume there are no losses and all 130 W is reflected back. That 130W is 51.14 dbm. If the circulator knocks down 70 db, then the amplifier would see 51.14 - 70 = -18.86 dbm which is 0.000013 Watts or 13 microWatts.

As a general rule just a fraction of the energy put out is reflected, and there are losses in the cable, the connectors, and every other thing in the path like filters and lightning arrestors on the path going to the antenna, and coming back from coming and going,

Energy at that low of a level will have no effect on the amplifier output. So we could reflect all of the energy the transmitter puts out, and the transmitter would not notice it because of the isolation circuit.

Both amplifiers are back from being repaired. The UHF amplifier had more damage than the VHF amplifier. They had to replace the output transistors in the VHF amplifier. But on the UHF amplifier they replaced the output transistors, a relay, and capacitors on the output filter circuit. So it cost over $120 more to repair than the VHF amplifier, and more than we expected.

Based on the discussion with the guy from DX Engineering, I purchased another set of lightning arrestors for the coax runs at the bottom of the water tower and replacement arc-plugs for the existing lightning arrestors. I know we have Alpha Delta lightning arrestors, but I do not know if we have 200W or 2000 W versions on top. The price is the same, 200W are O.K. for the other two coaxes, but with a VHF amplifier at 130W and a UHF amplifier at 100W sharing the coax, I do not think we should have a 200W lightning arrestor. 2000 W would be safer.

Last Saturday we wanted to climb the water tower to replace the broken GP-95 tri-band antenna for 1.2 GHz D-Star Voice and Winlink, and replace the lightning arrestor arc-plugs, and to check out the cabling for kinks, splits or leaks. While I was able to get two climbers (Tony and Damon) I was not able to get 3 people on the ground. I needed two more people, and nobody from the Repeater Committee, the Board, or a last minute try at Saturday breakfast was able to help. So we did not climb.

Tony and I installed the amplifiers back into the rack, and tested Tony's isolator with the VHF amplifier and it worked just as expected!

We put it back the way we have been running, without the amplifier until we finish the climb. I am not comfortable hooking it up again, until I am 100% sure there are no issues up top. We also have not addressed the additional notch filtering we expect to need for the higher power transmitter either.

So this weekend I have a class, Monday through Wednesday I will be in Austin, and then we will be scheduling the climb on Saturday, September 16.

We also supported the Little Buggy Kids Triathlon on Labor Day. They said they were expecting 250, but I think it was closer to 300 kids participating. I was able to round up 7 people to help. When we first started doing this, we had 27 volunteers to help.

K5PRK Information Net

Hello to all PARK members!

The purpose of this email is to inform everyone in the PARK community about the K5PRK Information Net held every Thursday evening at 8:00 p.m. on the K5PRK VHF repeater, 147.180, PL tone 107.2

The purpose of this Information Net is for the free exchange of information relating to Ham Radio technology, activities, experiences and events.

The Net is usually 1 hour long, but on occasion we might run over for a brief time, unless there is an ARES training program scheduled or for weather related nets, etc.

We would like to put out a standing invitation for suggestions and topics from everyone to be considered for discussion on the Net. We would also like information on upcoming events so that we can announce them over the Net in a timely manner.

Please send an e-mail to k5mfp@... <mailto:k5mfp@...>or to ccrissey@... <mailto:ccrissey@...>with your suggestions and topics. We are eager to hear from you!

2529. Repeater Work this Weekend

Yahoo group: laterisersgroup
Date: 2017-09-30 01:46:16 UTC
From: Kipton Moravec
Topic: 2529 Message: 2529

Tomorrow Saturday September 30, we are going to work on the repeater starting at 8:30 a.m. I have no idea how long we will be there. It depends on what we find.

On the Thursday before Balloon Festival I noticed there was some kind of feedback happening on the repeater just after someone finished talking. It lasted for a second or two then was gone. This sounded completely different than the feedback we were getting with the tone squelch before. It is almost like someone is blowing into a pipe. It is hard to describe the sound.

It happened a little at the Plano Balloon Festival. Fred (WD5ERD) was in the Command Trailer were he could hear the Repeater and the Field which was on a simplex frequency at the same time. During one of the balloon launches it happened again for a couple of seconds after someone let up on the key. Fred thought it was related to when the Field was talking. We changed the frequency of the Field on the next balloon launch and did not notice it happening. Rick (W5TUX) thought it sounded like inter-mod, where two frequencies mix in the transmitter output.

Thursday I was out of my office and came in a little after 9:20 p.m. and the feedback was going non-stop. Solid feedback not just a second or two. When someone talked you could not hear it, but as soon as they un-keyed it was there and would not stop.

After more than a few minutes of this and everyone was done, I shut the repeater off. I meant to turn it off for a half hour, but I got distracted and it was closer to 1 hour. When it turned on it was working fine with no hint of a problem.

It seems to me that it is related to how much the repeater is being used. After it is used a lot it seems to start and get worse the more it is used. I noticed the same problem with the other type of feedback we had before. It go worse the more the repeater was used.

If it was inter-mod I would think it would be independent of the amount the repeater is used. And I would think it would start as the other system was transmitting, and stop when the other transmitter was not transmitting.

The other issue is we are transmitting at 28W. The Diplexers are rated at 500W. The Lightning arrestors are rated at 2000W. I do not know what the Duplexers are rated at, but it is probably in the 300W to 700W range. So for something on the coax to the antenna getting warm does not make sense because we are using so little power compared to what the equipment is rated for. If we had the 130W amplifier on, that might be a different story.

We think we need more filtering because while the output is knocked down something like 70 db it is still a lot more than the sensitivity of the receiver. But if that was the problem I would expect it to be a problem all the time, not just after it warmed up through use.

So tomorrow morning, we are going to try a couple of things. We are going to monitor the reflected power when it works and when we have the feedback. We are also going to look at the spectrum when it works and when there is feedback. Hopefully these two measurements will lead us to what the issue is. One or both of those two things have to be changing.

We are also going to see if we can detect if the transmitter is getting warm. Maybe it is having problems with heat. It is supposed to have 100% duty cycle at 25W. Full power is 50W. 28W is over 25W but not by very much. (28W is what it needs to have the amplifier have 130W out.)

So once we get the test equipment on the system, then we have to try to make the feedback happen. I think it is just by transmitting a lot, but we are not 100% sure. You may get a chance to hear the good News Net. :)

Hopefully when we finish tomorrow we will have a better idea what is going on.

From: Kipton Moravec
Topic: 2529 Message: 2530

Tony and I got to the repeater site a little before 8:30 a.m. and setup the test equipment and took some measurements of the temperature of the VHF radio heat sink, the reflected power, the spectrum for transmit.

We ran the Amateur Radio Newsline for 10 minutes, and I accidentally stopped it instead of pausing it, so when it started it started from the beginning. But did not hear the noise.

We played it nonstop all the way through (about 30 minutes). No Noise.

We played it all the way through again. No Noise.

I downloaded the latest version and played it all the way through. Still no noise.

So we were on for about 100% of the time for about 90 minutes and we could not get it to occur.

The only thing I can think of it was warmer when it happened. It was about 72 degrees F outside today.

If you hear it happen again, send me an email to kip@..., with the date, time, and temperature and what was happening on the radio when it started. Maybe we can see a pattern.

2534. Technician License Class Oct 21st-22nd

Yahoo group: laterisersgroup
Date: 2017-10-01 23:59:34 UTC
From: mbpruden@...
Topic: 2534 Message: 2534

Save This Date: HAM RADIO CLASS
The Plano Amateur Radio Club will be presenting a Technician level amateur radio class on October 21st and 22nd, 2017. The class will be held at the Allen Central Fire Station training center, which is located at 310 Century Parkway, in Allen TX.. As always the class is free, the EXAM is $14.00 cash. We are looking at a timeframe of 8:00am- 5:00pm on Saturday and 8:00am- 3:00pm on Sunday, with the EXAM starting at 3:00 on Sunday. Limited parking should be available on the north side of the fire station. Additional parking is available across the street (Century Parkway), at the City of Allen municipal complex. A government issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement).
Other amateur radio class exams (General,Extra) will also be available for those wishing to take those exams. You need to bring a copy of your current amateur radio license.

To prepare for this class, we urge you to pick up a copy of a Technician License Class study guide prior to the class, and read through the course material at least once. The material is not difficult, but you should not expect to just walk in to the two day training class and grasp all the necessary information to successfully pass the exam. But, if you prepare by reading through the study guide, and marking any items that you have questions about, and then pay attention and ask questions during the two day training class, there is an excellent probability that you will pass the exam with a high score.

The course material we use matches the Ham Radio School's Technician Class study guide, by Stu Turner, which should be available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be $19.95. We highly recommend this study guide.

We also have a number of used study guides available, which we can loan you for $14.00 cash security deposit. When you return these used study guides, in good condition (not marked up or dog ear'ed), your $14.00 security deposit will be applied to the $14.00 cost to take the examination. Basically, we save you the cost of buying the study guide.

If you find it is easier for you to prepare by studying online material, and taking online practice exams, we would also suggest you look at "Ham Radio School's" online material. They have excellent online study resources. We would also recommend looking at the online testing available at the "Ham Whisperer" website on the Internet.

To register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@ARRL.NET). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Let us know if you are interested in one of our used study guides, and we will contact you regarding how to pick up your copy.

Thanks
Mike Pruden

2535. K5PRK Information Net on the repeater

Yahoo group: laterisersgroup
Date: 2017-10-04 01:10:17 UTC
From: Michael Payne - K5MFP
Topic: 2535 Message: 2535

K5PRK Information Net

Hello to all PARK members!

The purpose of this email is to inform everyone in the PARK community about the K5PRK Information Net held every Thursday evening at 8:00 p.m. on the K5PRK VHF repeater, 147.180, PL tone 107.2

The purpose of this Information Net is for the free exchange of information relating to Ham Radio technology, activities, experiences and events.

The Net is usually 1 hour long, but on occasion we might run over for a brief time, unless there is an ARES training program scheduled or for weather related nets, etc.

We would like to put out a standing invitation for suggestions and topics from everyone to be considered for discussion on the Net. We would also like information on upcoming events so that we can announce them over the Net in a timely manner.

Please send an e-mail to k5mfp@... <mailto:k5mfp@...>or to ccrissey@... <mailto:ccrissey@...>with your suggestions and topics. We are eager to hear from you!

2536. Repeater Work this Weekend 10-7-2017

Yahoo group: laterisersgroup
Date: 2017-10-07 00:58:29 UTC
From: Kipton Moravec
Topic: 2529 Message: 2536

The feedback we were looking for last weekend has not been heard (as far as I know) this week.

The difference I think is that has been a little cooler. I do not know what could be causing it. Until we can get it to happen when we are there with our test equipment on it we can only guess.

In the meantime we are going to move forward carefully and see what happens.

Saturday morning we are going to hook up the amplifier with the isolator and see what happens. We will probably start at the lowest power first, and see how it works, then go to a higher power, and finally go to full 130W power.

I suspect the tone feedback will reappear at some point. If you remember we were able to remove it by changing the sensitivity from -124 dbm to -120 dbm. 130W is about 8 dbm more power out, and I will guess we may have to change the sensitivity to something like -112 dbm. But let's see what happens. (The long term fix is more filtering.)

If the tests go well, we will keep it turned all week. If we suspect problems, we will go back to how it is this week.

Tony and I will be there at 8:30 a.m. We should be done before noon.

You may experience Amateur Radio News Line playing a couple of times, as it is a good test of the transmitter being on constantly for about 30 minutes.

We will be curious as we go to higher power how it sounds. And if you can see any difference in your S-meter, especially from people farther from the repeater.

Kip
PARK Communications Director

2537. Re: [K5PRK_rptr_move] Repeater Work this Weekend 10-7-2017

Yahoo group: laterisersgroup

From: Kipton Moravec
Topic: 2529 Message: 2537

Tony and I worked on the repeater. The goal today was to put the amplifier with isolator in and see what happens.

So first we put the watt meter in where the coax goes to the roof, (after the filters) because we were really interested in measuring the reflected power to see if anything on the roof changed while we were operating. Tony's Bird Watt meter has different modules that cause it to work at different frequencies, different power levels, and there is a module that has a tap for the spectrum analyzer. The bad news is we cannot measure power and use the spectrum analyzer at the same time.

We made measurements at this point for all of the power levels, and we looked at reflected power also.

Then we looked at the spectrum to see if there were any spurs, and did not see any up to 50 MHz on either side.

Next we hooked up the amplifier with the isolator and bandpass filter. We started with the low power and measured the power, and reflected power, then looked at the spectrum. Everything looked good.

We moved up to med power and repeated again everything looked good.

We moved to high power and again everything looked good.

When we are doing these tests we are keying and unkeying the repeater a number of times. Two times we saw the power drop to about half for a couple of seconds before it turned off after unkeying. I called Fred and he thought that was strange, and this made us start to suspect the VHF Radio.

But it happened only twice. We did not hear any of the feedback we heard during or after the PBF or the noise from the squelch tone feedback. (Which I expected to hear.)

But both happened after the repeater had been active for a while. We we loaded the latest Amateur Radio Newsline and let it play for about 30 minutes. Everything looked fine. At that point where we were measuring we were seeing about 68W. And it did not seem to vary. However when I keyed up to say the Newsline was over, the power pegged the 100W scale for about 3 seconds, before dropping back to 68W. It looks like something is wrong with the radio, I tried keying again and did not see it happen the rest of the time.

I will send Fred my radio configuration file and he will program and loan us another identical one. Next Saturday we will try it out.

In the meantime for this week we have disconnected the amplifier and it is working just like it did last week.

Kip

From: Michael Payne - K5MFP
Topic: 2541 Message: 2541

Hello to everyone!

I would like to invite you to the K5PRK Information Net that will take place on Thursday 19th at 8:00 p.m.

We are having a very good turnout with check-ins, and I'm sure that there are others who are simply listening in. We encourage you to join in the group. We usually have something to talk about and we have fun while we do it!

If you have a new radio or ham hardware that you would like to talk about, then we'd all like to hear about it! We also want to hear about personal experiences and your thoughts about ham radio in general.

We look and listen for you to join in the fun this Thursday night at 8:00.

73s,

Information Net Folks

2542. Laptop AC power supply

Yahoo group: laterisersgroup
Date: 2017-10-23 23:01:40 UTC
From: Michael Payne - K5MFP
Topic: 2542 Message: 2542

Good evening!

Does anyone have an A/C laptop power supply, Output = 12 volt, 5 amp and the center pin is positive on the connector to the laptop, that they wouldn't mind parting with for $10 or less?

My LCD monitor power supply dies this morning and I need to replace it, and a laptop power supply (60 watts - 90 watts) works just fine.

If you have one, would you kindly email me and let me know? I don't want to drive to Fry's or Micro Center from Frisco unless I have to.

Thanks and 73,

Michael K5MFP

2543. CW Worldwide DX Contest

Yahoo group: laterisersgroup

From: Stan Starks
Topic: 2543 Message: 2543

I just wanted to remind everyone that this weekend (starting at 7pm tonight) is the CQ Worldwide DX SSB Contest.
This is easily the largest DX contest of the year. You may work anyone outside of the continental U.S. and the exchange
is simply 59 + 04 (which is our CQ Zone). Though conditions are not great, this should still be a good opportunity to score some DX.
Remember that you don't have to be serious about the contest, or submit a log to make contacts.

Yahoo group: laterisersgroup
Date: 2017-10-30 19:01:02 UTC
From: Michael Payne - K5MFP
Topic: 2545 Message: 2545

Does anyone have a need for 3 GMRS/FRS handheld radios? They are perfect for hunting, keeping track of the kids around the neighborhood, Halloween, etc. and many other uses! Use them to scare the bejeebers out of Trick or Treat kids!

2 are Uniden brand rechargeable and small HT's and the other is a Motorola HT of the same size that takes 3 AA batteries. A charger is supplied for the 2 Unidens.

They are in perfect working order and are almost brand new. I used them for aiming and getting TV antenna in correct direction and for car-to-car communications with other family members in another car on a trip.

I would like to get something for them, so make a offer, otherwise, they will be dumpster fodder.

Have a great day and 73,

Happy Thanksgiving to all!

The Information Net will NOT be on the air this coming Thanksgiving, Thursday, the 23rd of November. We will resume the Information Net the following Thursday at 8:00 p.m.

NOTE!!

On _Thursday, De__cember 7th_, we will have a guest speaker on the K5PRK Information Net at 8:00 p.m. The guest is David Houser, KG5RDF, and David will be talking about NCTC (North Central Texas Connection) which is a collection of networked repeaters (no internet) covering North Texas, parts of West Texas and even into parts of north Louisiana.The primary purpose is to offer emergency communications for the weather service, Red Cross and other emergency services. It is open to all ham operators. Some of the Repeaters are digital (Fusion), some are 440 and others are 2m. The network is also addressable through Wires-x and Echolink. Check-ins are encouraged to ask questions of David.

His interests have been building and driving 200 mph drag cars.

I hope to hear you soon on the Net and I wish you all a very happy Thanksgiving!

The Dallas Marathon, Sunday, December 10, still needs volunteers.
Attached is some information.

Kip

To
All Amateur Radio Participants in the 2017 BMW Dallas Marathon

Greetings all,
Attached is a cover letter, a copy of the Preliminary Assignment Sheet, and the frequency plan for this year's BMW Dallas Marathon. Please look these documents over carefully. Detailed information can be found on the Dallas Marathon Yahoo group site, or you can email John, N5TIM, at n5tim@... <mailto:n5tim@...> or Bob, W5BJ, at w5bj@... <mailto:w5bj@...>, or ask your question(s) during the on-the-air briefing on Thursday, December 7th.

We're looking forward to a successful event again this year. Be sure you have ample battery capacity if you are using HT(s).

73,
Bob, W5BJ, John, N5TIM and Garland, W5IDN
2017 BMW Dallas Marathon Communications Committee

2556. Repeater Status as of November 30, 2017

Yahoo group: laterisersgroup
Date: 2017-12-02 13:16:54 UTC
From: Kipton Moravec
Topic: 2556 Message: 2556

The repeater has been sounding better since we put in the band pass filter 2 weeks ago.

Unfortunately the tone squelch feedback comes back sometimes. I heard it before 8 a.m. on Friday, Saturday, and Sunday after Thanksgiving when it was happening for long periods of time. Tonight I hear it for very short bursts after the repeater is keyed.

I believe we have to lower the amount of signal from the transmitter that the receiver sees. The new receiver is much more sensitive than the old repeater. 45 years later the electronics are better. We have two devices that can do that. Tony found a good deal on a VHF cavity notch filter. When tuned it looks like it can notch the transmitter about 15 db and attenuate the receive by about 0.2 db (insertion loss). That is what we will install Saturday morning.

The other option is the VHF cavity filter I got in Fort Worth. It can attenuate the transmitter between 95 and 100 db, with an insertion loss of about 1 db. When we tried it last time we could not see the transmitted signal at all above the noise. I would prefer to not use it as it is 2 out of a matched set of 4.

The notch filter is all we will change this Saturday. The reason we are going slow is so we can see the effect of each part, The noise does not usually appear when we are there. If it did, we could probably identify and fix it quicker.

The band pass filter we put in last time has made it work much better. I think it has attenuated the signals that were causing intermodulation distortion. (https://en.wikipedia.org/wiki/Intermodulation) If I remember right it attenuated the signals in the UHF band by over 30 db. The school bus radio is still coming in strong, but not as strong. We could hear the difference in sensitivity of the receiver after it was in. And the feedback noises are greatly reduced.

The repeater radio was sent to ICOM for repair because it did not seem to be working right. Sure enough they replaced the PA and they did some work on the low pass filter. They fixed at no charge. It is back, but in the spirit of fixing one thing at a time, we will not replace it this week, but probably next time.

So expect the repeater to be down Saturday morning. Tony and I will be there at 8:00 a.m. and I do not expect we will be there 2 hours. So unless something unexpected happens, it should be back in operation by 10:00 a.m.

Kipton Moravec AE5IB
PARK Communications Director

P.S. The Dallas Marathon still needs more volunteers for Sunday December 10. Contact John, N5TIM, at n5tim@... <mailto:n5tim@...> or Bob, W5BJ, at w5bj@... <mailto:w5bj@...>, to volunteer.

2557. Breakfast Location

2558. K5PRK Information Net Notice for 12/7/2017

Yahoo group: laterisersgroup
Date: 2017-12-02 18:08:08 UTC
From: Michael Payne - K5MFP
Topic: 2558 Message: 2558

I would like to invite everyone to listen in on Thursday, December 7,, 2017 to the K5PRK information Net at 8:00 p.m.

We will have a guest speaker on to give a presentation. His name is David Houser and he will talk about NCTC (North Central Texas Connection) which is a collection of networked repeaters covering North Texas, parts of West Texas and even into parts of north Louisiana. The primary purpose is to offer emergency communications for the Weather Service, Red Cross and other emergency services. It is open to all ham operators. Some of the repeaters are digital (Fusion), some are 440 and others are 2m. The network is also addressable through Wires-X and Echolink.

I think that this is going to be very interesting for all. Be sure to check-in with Charlie Chrissey, KG5NAN on the net that night and be sure to bring your questions for our guest speaker.

Hope to hear you on the net!

73,

Michael K5MFP

To all hams!

I would like to invite everyone to listen in on Thursday, December 7, 2017 to the K5PRK information Net at _8:00 p.m. _on the PARK 2meter repeater, 147.180 + PL 107.3.

We will have a guest speaker and his name is David Houser. He will talk about NCTC (North Central Texas Connection) which is a collection of networked repeaters covering North Texas, parts of West Texas and even into parts of north Louisiana. The primary purpose is to offer emergency communications for the Weather Service, Red Cross and other emergency services. It is open to all ham operators. Some of the repeaters are digital (Fusion), some are 440 and others are 2m. The network is also addressable through Wires-X and Echolink.

I think that this is going to be very interesting program for everyone. Be sure to check-in with Charlie Chrissey, KG5NAN on the net that night and be sure to bring your questions for our guest speaker, because he will be ready to address them.

Hope to hear you on the net! Tell your friends, even if they aren't members to join in!

73,

Michael K5MFP

2560. K5PRK 147.18 VHF Repeater Squelch Tone Turned off for now

Yahoo group: laterisersgroup
Date: 2017-12-10 01:50:17 UTC
From: Kipton Moravec
Topic: 2560 Message: 2560

The transmit squelch tone feedback was back in full force last night and this morning. It quit around noon,but at about 4:00 Saturday I stopped at the repeater site and disabled the transmit squelch.

Some people use it and some people do not.

If you do not have tone squelch enabled, nothing will be different.

If you have tone squelch enabled, than you will not hear the repeater, because the squelch on your radio will stay off because the tone is not present.

I would recommend next time you program your transmitter, store two channels, one with tone squelch enabled, and one with it disabled. That way while we are trying to find the source of the feedback you can switch to the way we are currently operating.

It is desired to have the tone squelch working, because you will only hear when the PARK transmits, and not hear when the Bosque County repeater transmits.

We will continue to try to find the issue that is causing the feedback.

Kip

2561. Information Net and the Christmas Holidays

2565. Repeater Status as of 12/29/2017

Yahoo group: laterisersgroup
Date: 2017-12-30 18:46:05 UTC
From: Kipton Moravec
Topic: 2565 Message: 2565

Tony and I went to the repeater from 9:00 a.m.and left at 2:00 p.m.

When we first got there the repeater was working with no feedback problems because we had the Tone Squelch turned off.

We replaced the loaner VHF Repeater radio with our repaired VHF Repeater radio.

The tone squelch back on by default.

We tested at all power levels 50W, 25W and 11W and it seemed to work O.K. Since the radio is not rated for continuous operation at 50W but is rated at continuous operation at 25W, we modified the power levels to be 25W, 11W and 5.5W (H, L2, and L1 respectively). That way nobody can accidentally set the switch above 25W.

We hooked up the notch filter and every thing seemed to work fine. Before this was the point we were all but guaranteed to get feedback.

We tested at all power levels and everybody reported good signals.

Tony had gotten a splitter that we were able to put on the receive line so we could monitor what the receiver was seeing while hooked to the repeater radio.

We checked the system and everything seemed to be working fine. Since it was not failing there was not much more we could do.

We packed up the test gear and we were about to open the door to leave (it was cold outside and inside) and the feedback started happening again!

So we unpacked again and started looking for the issue. One thing we noticed that we had not seen before was when we transmitted the controller channel 5 transmit light was on. That was the transmit for the raspberry pi.

So we disconnected the audio cables between the Raspberry Pi and the controller port. The Port 5 transmit light still lit. The way it had been setup, was that the Raspberry Pi was linked to the VHF. So when there was audio out the Raspberry Pi it would be transmitted over the repeater. I got into the SW and broke the link, the Port 5 Transmit light did not light up anymore, but we still had the feedback.

We measured the transmit signal that got into the receiver. And it was about -64 dbm without the extra notch filter. When we had measured the notch filter with a network analyzer we saw that it knocked the transmit frequency (147.18MHz) down about 30 db. But when we put it in-line we saw it only reduced the transmit frequency down to -68dbm. We expected

-94 dbm.

We had similar results with the receive part of the cavity filters I got from Fort Worth. The filter knocked the transmit frequency down between 95 and 100 db. But when we measured in line we still saw about -68 dbm on the receiver. We expected something like -160 dbm.

So now either energy is getting in somewhere else, or something is wrong with our measurements.

We have no idea what is going on.

We tried a lot of things. We powered down the weather radio, and disconnected all of the wires in case RF was getting in the cables and getting into the transmitter that way somehow. We disconnected all the connections between the Raspberry pi and the controller.

We disconnected the UHF repeater from the controller. We swapped cables between the UHF Radio and controller and the cable between the VHF Radio and the controller.

No difference. We put things back together and tried to think of another idea.

And then the feedback stopped.

It seems independent of anything we did.

So we started focusing on how RF from the transmitter could get into the receiver other than directly.

We have LMR400 for all the coax in the repeater. That is double shielded. But still, -68 dbm is a very small signal. For those of you more familiar with watts that is 1.58E-10 or 0.000000000158 W. (That is a lot of zeros!)

So we started trying more things, The coax bundle that comes out of the rack had the UHF and VHF transmit and receive cables tied together with cable ties. We decided to separate the VHF receive cable from the rest, because it was about 10 feet of those cables being right next to each other and the energy goes down by the square of the distance. So instead of being right next to the cable for 10 feet it was between 6" and 18" away for those 10 feet.

The notch filter, band pass filter and transmit isolator were also in the cabinet. So we disconnected the isolator in the event it was emitting RF, and we went with the cavity filter from Fort Worth instead of the notch filter because it filtered more and it was located outside the cabinet . And decided to wait and see what happened.

After 5 hours at the repeater site we decided to go home and warm up. It was in the high 50s where the repeaters are located.

All of last night I think it was O.K. But this morning there was feedback but it seemed to quit on its own sometimes. (Sometimes I turned it off for a few seconds.) After 11:30 a.m. it seemed to stop all together. I hate to use non analytic terms, but it "felt" better than before.

The only thing we have not swapped out is the controller. Another thing we want to try is to put ferrite on all of the the power and signal lines. We are going to try both on Monday. Happy New Year!

Right now the Tone Squelch is back on, but if the feedback gets bad, I will go back and turn it off.

Speaking of tone squelch. The TYT radio I got at the Christmas Party does not have the ability to have a separate tone squelch frequency from the repeater input tone. So some radios can do it and some can not. So the idea of changing the tone squelch for the output to be different than the input can work for some radios but not for others.

2567. Repeater Status as of 1/2/2018

Yahoo group: laterisersgroup
Date: 2018-01-03 02:19:49 UTC
From: Kipton Moravec
Topic: 2567 Message: 2567

I just noticed I put 2017 on yesterday's subject.

Monday we spent 4.5 hours in the cold cold water tower working on the repeater.

We tried a bunch of things.

The repeater feedback noise was going strong when we got there.

We hooked the circulator (transmit isolator) back up. When we left last time we were worried that we might be radiating in the cabinet. The isolator was in the open so just to see we removed it from the circuit. As you are aware that made no difference.

We could not see any signal on the input with our spectrum analyzer. That made me think we might have RF coming in other sources, like on the cables. So Tony brought clamp on ferrites for the cables to reduce the RF on the wires. We even tried a ferrite balum into the receiver. Made no difference.

Tony put a 10 db attenuator on the transmitter and the feedback went away. (He meant to put it on the receive side, but the effect was the same.) So I started playing with the squelch and found a high squelch value that seemed to make it disappear. When we measured the sensitivity we had around -120 dbm when we started and about -110 dbm when we had the high squelch. So it was similar to the 10 db attenuator.

Damon Koch brought over the DSP-404 and we spent some time hooking it up. The repeater controller is one of the few things we had not replaced. So we decided to try the other one. It is made by the same company that we already had, and most of the commands are the same, but the HW addresses were different. And it has 4 channels as opposed to 6 on the Club Deluxe.

First thing we found out was that the VHF port was programmed wrong. So we put the VHF in the UHF port and it started working. The messages are wrong and if you listen it tells you the wrong PL tone. We have not changed the PL tone and Damon will try to fix the message this week. We were able to get it on the network and we could talk to it with the Raspberry Pi. So we can program it remotely. So we can fix the messages without going to the site.

The repeater guru, Dave Murman WA4ECM, has been telling me he thinks we should get rid of the diplexers. We have a diplexer at the top to split the signal for the UHF and VHF antennas. We have a diplexer at the bottom for the UHF and VHF repeaters. Between the diplexers we have the 1 5/8" coax for the 270 feet of low loss run. We tested the diplexers

before with a network analyzer and they worked as expected.

We have not tried to remove them because it would mean another climb. That takes a lot of preparation, a team of at least 4 (6 is better). And this week was too cold to even think about that.

Since we had the isolator protecting the transmitter we decided to try to hook up the repeater to one of the tri-band antennas. In the process of moving the cable from one 1 5/8" coax to another we noticed the whole connector on the 10 foot patch cable spun freely. That is not right. It was one of the few cables that had not been replaced. We had a 10 foot piece of LMR-240 with N connectors on both sides and we have that on there until we can replace it with LMR-400 like the rest of the system. Unfortunately it did not affect the feedback. We still had feedback when we replaced the coax.

So we moved the coax to the tri-band antenna. There is no diplexer on the roof with this antenna. No feedback for a couple of minutes, then feedback. I was hoping it would tell us if the problem was upstairs or down stairs. It appeared to be down stairs.

Tony got on the ladder and took out the diplexer for the UHF repeater. This would disable the UHF repeater. No more feedback! We decided not to change anything and wait a week to see if the feedback returned. We have thought we have fixed it in the past only to have it return later. So if we do not hear the feedback for a few days then we might have found the problem. I am cautiously optimistic.

However, in the meantime everything else is down. D-star is down, Winlink is down, UHF repeater is down, and the APRS digipeater is down. We will try to bring as much up as possible on Saturday. The repeater will incorrectly say it is UHF and say it is 79.7 PL tone, but we will get the messages fixed this week.

Thanks to all that have helped -- Tony, Damon, and Dave.

Hello everyone!

There will be a K5PRK Information Net this coming Thursday, January 4th, 2018. Reid Bannon, N5ZT, will be joining us as another voice on the net.

FYI.... The 2m repeater might announce that it is the 444 machine, but you are really on the 2m frequency.

73,

Michael K5MFP

Topic: 2570 Message: 2570

Good afternoon!

The Information Net will be tomorrow night at 8:00 p.m. on 147.280, unless the noise comes back to the repeater. If the noise returns before or during the net, then we will close the net and call it a day because we do not have the 444.250 repeater to fall back on.

Hope to hear you tomorrow night!

73,

Michael K5MFP

2572. Repeater Status as of 1/14/2018

Yahoo group: laterisersgroup
Date: 2018-01-14 22:35:52 UTC
From: Kipton Moravec
Topic: 2567 Message: 2572

On January 1, we tested the repeater using one of the triband antennas.

With the triband antenna, there was feedback when the lower diplexer (to let the UHF and VHF antennas share the same coax) was in.

When we removed the diplexer we no longer had the feedback issue on the triband antenna.

Over the past 2 weeks there was off and on static on the repeater. It appeared to start Sunday January 7, and was so bad the ARES Net was moved to the McKinney Repeater. Likewise on Thursday the Information net had so much noise they quit just after check-in because of the static.

Listening on the input frequency, everybody seemed to have a good signal. The signals out of the repeater were O.K. when someone came in with a strong signal like K5GTX who lives close to the repeater or when the repeater identified. It appeared to be a receive issue.

I was sick the weekend of January 6-7. So we did not do anything.

Tony and I went back to the repeater site on Saturday, January 13. And we were able to confirm the static. We had a lot of static on both triband antennas. We had no static on the analog UHF and VHF antenna setup.

We tried K5IMO and unfortunately his signal was below what we could measure with our RF Analyzer. We were able to see K5MJP's signal and we noticed a 2db receive difference between the triband and separate VHF/UHF antenna. But I find it hard to believe 2 db is the difference between static and no static.

At 50W K5IMO had static on the triband and no static on the VHF/UHF antennas. He had a little noise when he dropped to 20 W (>3db down) on the UHF/VHF antennas but he was perfectly readable at that lower level.

In all our testing Saturday we had no feedback. We thought that confirmed it was the removed lower diplexer causing the feedback.

Unfortunately the UHF/VHF antennas have the same diplexer on the top to split the coax to the two antennas. And Saturday night and all Sunday morning the feedback came back.

Sunday I went back to the repeater site and turned off the D-Star system. When we were on the triband antenna and did not have feedback, the D-Star system was also off. But it made no difference today if the D-Star is on or off, with respect to feedback, so I turned it back on.

So our current thinking is the diplexer on the top is causing the intermod which we are hearing as feedback. We have to schedule a climb

to remove the diplexer. That will not happen until February. Next weekend is Collin County Skywarn, and the following weekend is Winter Field Day. Weekend after that is February 4. We need at least 6 people for a safe climb with support. So it is a matter of who is available what weekend and if the weather will cooperate.

And we have other things to do while we are there. We need to test the triband antennas again to see what could be making them so much worse. I would like to raise them both about 5 feet.

For now the transmit tone is turned off on the VHF repeater, and all extra filtering is removed which gives us an additional 2-3 db of receive signal strength. D-Star UHF, and both D-Star 1.2GHz are on. The UHF repeater, APRS, and Winlink at the repeater site are turned off for now.

Save This Date:
2018 General License Ham Radio Course

The Plano Amateur Radio Club is presenting an amateur radio General License class. The class will be held on Saturday and Sunday: February 10th-11th, and February 17th-18th. The class will be held at the Lucas Fire Station training facility. The fire station is located at 165 Country Club Ln, which is just north of Bethany/Lucas Rd, in Lucas TX. Lucas is located just east of Allen, TX off of US Hwy 75 at the Bethany Rd. exit.

As always the class is free, the test is $14.00 cash. The class will start at 8:00am each day and will finish up by at least 5:00pm, depending on class participation and questions. The EXAM will begin at 3:00 on Sunday February the 18th. Other amateur radio class exams (Technician or Extra) will also be available for those wishing to take those exams. Parking should be available on the south side of the fire station. A government issued photo ID will be required to take the exam on the Sunday afternoon of the exam . You also need to bring a copy of your current FCC amateur radio license on the date of the exam. (FCC Requirement).

To prepare for this class, we urge you to pick up a copy of one of the general class study guides, and read through the material at least once prior to the class. You should not expect to just walk in to the four day training class and grasp all the necessary information to successfully pass the exam. But, if you prepare by reading through the study guide at least once, and marking any items that you have questions about, and then pay attention and ask questions during the four day training class, there is an excellent probability that you will pass the exam with a high score.

Our course material is based on the "Ham Radio School's General License Course" Study Guide, by Stu Turner. These study guides are available locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano. The cost for the study guide should be around $20.00. There are also a number of online practice exams that can help you identify those areas where you need a little extra practice.

TO REGISTER, or if you have any additional questions, please send an email to Mike Pruden at (NN5ZZ@ARRL.NET). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

Thanks
Mike Pruden

2576. Water tower Climb

Yahoo group: laterisersgroup
Date: 2018-02-03 02:09:47 UTC
From: Kipton Moravec
Topic: 2576 Message: 2576

This week Tony went to Georgia and I was in Austin. We did not get everything done to climb the Water Tower this week. So it is not going to happen.

The next time we have Tony, Andy and I all available is February 17. So that is the next chance -- weather permitting.

I have purchased brackets to mount a mast where the triband antennas are. Texas Towers sells 6 and 12 foot mast sections. I think I will get two 12 foot 1 1/2" masts for raising the triband antennas above the digital antennas that are less than a foot away.

We expect that the coax will not be long enough, so we will have to make new coax for the triband antennas on site. We will crimp one end before the climb, and make a measurement, then crimp the other end at the proper point on the ground, and send it up.

The second thing we will do is remove the UHF/VHF diplexer to hopefully remove the feedback from inter-mod on the park VHF repeater.

Finally, one lightning arrestor was missed being replaced on the last climb. We will fix it this time.

Hello, everyone!

Well, in case you missed last nights Information Net, we had a very good turnout. There were 13 check-ins and an unknown number of listeners present between 8:00 and 9:00 p.m., but we always have room for more participants!

If you haven't tuned in yet, we would like to invite you to check the net out each Thursday night at 8:00 p.m. on the K5PRK repeater on 147.180.

We are also looking for listeners who have experience in the hobby, to help out and answer questions from the new ham to the veterans among us. The expertise will be most appreciated!

Hope to hear you on the net!

73's,

K5MFP

2578. Tower Climb February 17, 9:00 a.m.

Yahoo group: laterisersgroup

From: Kipton Moravec
Topic: 2578 Message: 2578

Things2 are getting ready for next Saturday's (February 17) tower climb.

We have 3 tasks to do.

1. Remove the diplexer on the PARK UHF/VHF repeater. This will mean that that coax will only support the VHF Repeater. We think the diplexer is the source of the feedback. Another possibility is a bad connector on top. So we will measure the existing coax and replace the run from the lightning arrestor to the antenna. That is what we will do for the VHF Repeater.

2. Raise the tri-band antennas. Someone placed masts with some GHz antennas between 8 and 12 inches next to our tri-band antennas. Since there are so many antennas up there now, we cannot just move over. So the plan is to go up. I think they are on 5 foot masts. So we have purchased brackets to connect a mast to the pipe we are currently on. They are in hand. Today or Monday, I will pick up 1.5" diameter aluminum masts from Texas Towers for next Saturday. When we raise the antennas the coax will be too short so we will have to measure and make new coaxes for both of those antennas.

3. We missed exchanging a lightning arrestor on one of the tri-band antennas during the last climb. We will fix that.

At the moment Andy Knepler and Damon Koch will do the climb.

Tony and I will be at the bottom to build and test the new coax cables. And check each system as they get put back into service.

I need at least 3 more people.

One needs to be stationed on the catwalk as a relay. It is a good climb up a ladder to the catwalk, but there are rest stops on the way if you need it. There is a rope from the top of the 4th floor to the catwalk for hauling stuff up. And another rope from the other end of the catwalk to the roof. Your job would be to pull up material to the catwalk, and take it to the other rope for the guys on top to haul the rest of the way up.

Another person needs to be on the top of the 4th floor. Your job is to send stuff up to the person on the catwalk.

Another person is needed on the 4th floor and as a runner. You need to pass material to the person 10 feet above you. There is an elevator from the ground to the 4th floor.

I would like someone to take pictures on the ground.

Everybody needs a HT (with an ear piece is recommended,but not required) because it is hard to hear in the water tower. There are a lot of echoes.

Please contact me directly if you will be able to help. We will probably gather at 9:00 a.m. and I hope we will be done before noon. Use kip@... to volunteer.

There will be a Go/Nogo decision at 9:00 p.m. Friday night on the PARK VHF repeater. If the weather is bad we will not climb.

2581. ATTENTION ALL PARK MEMBERS

Yahoo group: laterisersgroup
Date: 2018-03-01 05:13:02 UTC
From: Michael Payne - K5MFP
Topic: 2581 Message: 2581

The PARK club is in need of volunteers on this coming Saturday.

Help is needed for the K5PRK repeater work to be done this coming Saturday, March 3rd, 2018 in Allen, Texas. The water tower is located off of Bethany and Highway 75, and turn on Prestige street. We need to be there at the site at 9:00 a.m. Saturday morning.

We are in need of several people to volunteer their time, effort and skills.

We need 2 people to be able to climb the catwalk to take materials up or down for the people who will be up on the top of the tower, working to get our repeater back up and working correctly.

We have had men as old as 72 do this in the past, but we need 2 younger people who would volunteer to ferry parts up and down. I think 2 people would be enough on the catwalk. One person to climb up and down, and then the other person to take turns with the other. This will help each other to keep from getting tired.

We will also need 3 - 4 more volunteers to help get things from the truck(s) and bring the materials to the guys in the repeater area who will be working and testing the repeater. We will need all the help we can get. If you have a hardhat, by all means, bring it for safety.

Please volunteer your time for our repeater work. Please contact Kip Moravec - AE5IB at kip@... , Tony Campbell - W5ADC, at Tony@..., or me at K5MFP@..._____as soon as possible._

2582. Repeater Status as of March 4, 2018

Yahoo group: laterisersgroup
Date: 2018-03-05 00:43:43 UTC
From: Kipton Moravec
Topic: 2582 Message: 2582

Yesterday, Saturday March 3, we went to the repeater site and did a climb.

We had a great group of people to help us. I think there was a total of 8. The extra hands made it go much easier. Thank you all for showing up -- especially the new faces! And also thank you Kathleen for showing up with 2 dozen warm donuts!

So here is what we did,

1. Removed the Diplexer on the top that split the signal between the VHF antenna, and the UHF antenna on the Analog (Blue) coax. So for now the coax is tied directly to the VHF DB type Antenna.

2. Replaced the Coax from the 1 5/8" coax to the VHF antenna.

3. The other two Tri-band Antennas (Comet GP-95) were put on masts. One of the city contractors put a mast right next to our antenna. On one it was about 8" on the other about 12". We got some 1 1/2" Aluminum mast 12' tall and mounted the antenna on it. This put our antennas above the antennas that were really close to out antenna. We had purchased some brackets that let us hook the mast to the pipe we were connected to. They were designed for up to 2 1/4" OD tubing. and the pipe up there was 2" ID, and 2 1/2" OD, so the would not fit around the pipe. We are currently using 4 hose clamps on each one until we can get the right type of clamp.

4. We had replaced one of the Tri-band antennas last summer, because someone damaged it. The other Tri-band is starting to show wear after being up there 10 years. Andy was able to tighten up the radials, but he thinks it will need to be replaced soon.

5. Because the Tri-band antennas were raised, we had to replace the Coax from the 1 5/8" Coax to the antennas on the masts. The old coax was too short, and we wanted to replace it anyway after 10 years of use.

When we tested the system, we turned on the transmit tone, and did not get any feedback. The users seemed to think that it was quieter, and sounded better. So it appeared to fix the problem. But because we had thought we fixed it a number of times before, we decided to let it go a week before we declared victory. But we were cautiously optimistic.

Sunday,that optimism was dashed, as I was sitting in my office and I heard the feedback go for 5 seconds, then stop after someone keyed the machine, but did not say anything. This happened about 3 times. Then it started and would not turn off. After a couple of minutes, I turned off the repeater remotely, and turned it on again and it had stopped. But then it started again. So I got in the truck and headed to the water

tower after calling the Water Department to see if they could let me in.

When I got there it was still going with the feedback, so I turned off the transmitter, turned it back on, and changed it to no transmit (Squelch) tone.

When I got back to my office there were a couple of times I could hear the feedback in the trailing of someone's keying (That 1/2 seconds after you let off the PTT before the repeater transmitter stops transmitting.) But as I write this about 6:00 p.m.Sunday, I do not currently hear it.

I talked to John Beadles (N5OOM) about it. I told him the only thing left was the antenna. It has a phasing harness because that antenna has 4 loops in phase to increase the horizontal gain. He told me it may not be our antenna. It may be another antenna mixing and producing the input frequency of our VHF repeater. (147.78 MHz) We might be able to find it if we knew all the frequencies being used on the top of the water tower, and do the math for inter-modulation.

Unfortunately we tried to get frequencies a couple of years ago, when there were fewer antennas up there and the city could not gather the information because there were so many systems with so many contractors. Last time we were up there, there were 40 antennas on top of the water tower. This time we know they sent a 2" bundle of Ethernet cables up there for new antennas, and so there are a bunch more now. I have pictures of the antennas, I may try to count them.

For now everything is up except the Analog UHF. (We will try to get that going in the next month.)

The following are operational:

VHF Repeater is on without the transmit squelch tone.

APRS on 144.34 Alternate frequency is on.

Winlink on 145.030

441.575 MHz + DStar UHF Digital Voice Port B

1295.000 MHz -20.000 DStar 23 cm Digital Voice Port A

1255.000MHz DStar 23 cm Digital Data

I feel for you Kipling. All. Of you have put in a LOT of time and effort on these problems.

As for the inter mod, maybe try an SDR radio that can scan up to 6 ghz. It'll be a pain to scan but you could narrow it down to the frequencies that could cause a problem...

From: Michael Payne - K5MFP
Topic: 2584 Message: 2584

Hello to all!

I just wanted to take a moment to let everyone know that there will be another K5PRK Information Net on this coming Thursday night at 8:00 p.m.

Please join everyone and lets talk about any ham related projects, problems things to do and anything that anyone has that's on their mind.

73,

K5MFP

P.S. Was someone in wone of the previous nets that was looking for a VHF only radio? If so, make sure to bring it up this Thursday night!

2585. Technician License Amateur Radio Class May 19th-20th

Yahoo group: laterisersgroup
Date: 2018-04-13 20:05:29 UTC
From: Mike Pruden
Topic: 2585 Message: 2585

Save This Date: HAMRADIO CLASS

The Plano Amateur Radio Club will be presenting aTechnician level amateur radio class on May 19th and 20th,2018. The class will be held atthe Allen Central Fire Station training center, which is located at 310 CenturyParkway, in Allen TX.. As always the class is free, the EXAMis $14.00 cash. We are looking at a timeframe of 8:00am- 5:00pm on Saturday and8:00am- 3:00pm on Sunday, with the EXAM starting at 3:00 pm on Sunday. Limited parkingshould be available on the north side of the fire station. Additionalparking is available across the street (Century Parkway), at the City of Allenmunicipal complex.

To prepare for thisclass, we urge you to pick up a copy of the Ham Radio School's Technician Class study guide prior to the class,and read through the course material at least once. We have a number of theseused study guides available, which we can provide you for free, because the exam material they cover will be expiring on June30th of this year. If you prepare by reading through the study guide, andmarking any items that you have questions about, and then pay attention and askquestions during the two day training class, there is an excellent probabilitythat you will pass the exam with a high score. Other Technician License Study Guides are available locally at the Ham RadioOutlet store 701 E. Plano Parkway Suite 406, across the street from Fry'sElectronics in Plano.

A governmentissued photo ID will be required to take the exam on Sunday afternoon (FCCRequirement). Other amateur radio class exams (General,Extra) will alsobe available for those wishing to take those exams. For these advanced exams, youwill need to bring a copy of your current amateur radio license.

Toregister for this class, or if youhave additional questions, please send an email to Mike Pruden at (NN5ZZ@...). Please provide yourNAME, EMAIL ADDRESS, and TELEPHONE NUMBER, so we can contact you with anyquestions.

Let us know if you are interested inone of our used study guides, and we will contact you regarding how to pick upyour copy.

Thanks

Mike Pruden

2590. Walk to Cure Arthritis May 19th

Yahoo group: laterisersgroup
Date: 2018-05-09 00:21:36 UTC
From: tony@...
Topic: 2590 Message: 2590

Please join me again this year in support the 2018 Walk to Cure Arthritis. The event is May 19th in the morning. Since there move to Plano last year, the participation is growing and they continue to need our support. We will need approximately 12 hams to support this event. The potential assignments are listed below. They asked we could also supply a few generators to support the PA systems and a few other items that need AC power. Since I know that per capita we hams have more generators that any other group, I thought this would be a sure thing. Even if you can’t make the event we still could use your generator. We will make sure that it is returned with gas in it..

Positions
Net Control
Asst Net Control
Cart 1
Cart 2
Cart 3
Tail
Water Station 1 (May have to walk to location)
Water Station 2 (May have to walk to location)
Water Station 3 (May have to walk to location)
Police Liaison
Medical Liaison
AC Generator Wrangler (2 Staff)

Volunteers need to be on-site at Oak Point Park no later than 7:00 am. Almost all operators will be released before 11:00 am.

The sign up link is shown below. There is an option for generator loan only.

2593. Re: [PARKFieldDay] Fans for Field Day

Yahoo group: laterisersgroup
Date: 2018-05-27 01:14:11 UTC
From: Michael Payne - K5MFP
Topic: 2593 Message: 2593

Hello, everyone!

Does anyone remember several years ago at Field Day that someone brought a 5 or 6 foot round fan that was powerful and moved a lot of air? If anyone has any knowledge of who owned the fan, would you please let Michael Riedel - KE5VCT, or myself - K5MFP, know who that person is. I would like to see if we could borrow it for Field Day this year. The fan, coupled with a few other smaller fans could make a very noticeable difference in everyone's comfort level.

Thanks and 73,

Michael?? K5MFP

2594. Battery Box

Yahoo group: laterisersgroup
Date: 2018-06-06 17:40:16 UTC
From: Michael Payne - K5MFP
Topic: 2594 Message: 2594

Hello,

I am looking for a battery box made from plastic, the kind that doesn't usually have a cover. I used to see them in personal boats.

If you have one that is dirty, that's ok, because they clean up pretty well. If you do have one and no longer need it, please reply to this email and I'll get back in touch.

Thanks and 73,

Michael K5MFP

2595. No Net This Thursday Night

Yahoo group: laterisersgroup
Date: 2018-07-04 00:07:20 UTC

2599. Save This Date Technician License Class

Yahoo group: laterisersgroup
Date: 2018-07-27 16:14:32 UTC
From: mbpruden@...
Topic: 2599 Message: 2599

Save This Date: HAM RADIO CLASS
The Plano Amateur Radio Club will be presenting a Technician level amateur radio class on August 25th and 26th. The class will be held at the Allen Central Fire Station training center, which is located at 310 Century Parkway, in Allen TX.. As always the class is free, the EXAM is $14.00 cash. We are looking at a timeframe of 8:00am- 5:00pm on Saturday and 8:00am- 3:00pm on Sunday, with the licensing EXAM starting at 3:00 on Sunday. Limited parking should be available on the north side of the fire station. Additional parking is available across the street (Century Parkway), at the City of Allen municipal complex.

To prepare for this class, we urge you to pick up a copy of the HamRadioSchool.com Technician License Course study guide, by Stu Turner, which complements our class room presentation material. Although we will cover all the material, you should not expect to be able to just walk in and grasp all the information and concepts necessary to successfully pass the exam during our two day course. The material is not difficult, but there are a lot of new terms and concepts which you probably have not been introduced to before. This study guide presents the material in a user friendly manner and is largely written to target a boy scout level audience. If you prepare by reading through the study guide at least once prior to the class, marking any items that you have questions about, pay attention and ask questions during the two day training class, there is an excellent probability that you will be able to pass the Technician Licensing exam with a high score. These study guides are available via Amazon, and locally at the Ham Radio Outlet store 701 E. Plano Parkway Suite 406, across the street from Fry's Electronics in Plano.

A government/school issued photo ID will be required to take the exam on Sunday afternoon (FCC Requirement). Other amateur radio class exams (General,Extra) will also be available for those wishing to take those exams. For these advanced exams, you will need to bring a copy of your current amateur radio license.

To reserve your seat, and register for this class, or if you have additional questions, please send an email to Mike Pruden at (NN5ZZ@ARRL.NET). Please provide your NAME, EMAIL ADDRESS, and TELEPHONE NUMBER.

.

Thanks
Mike Pruden
